In short, no. In consensually, punishing the productive through income tax to reward parasitic behavior is the biggest affront against the principle of free market. In fact, from many governments intervention in economy, the one that proponents of free market often oppose the most is welfare.

However, when we look further, capitalism and welfare is not really total opposites. Most importantly, properly done, a straight forward welfare program can cause less market distortion, and hence an efficient replacement to buy votes from losers, than farm subsidies, public schools, minimum wage, trades restrictions, tariffs, and sex laws. If it's done by taxing wealth, rather than income, the amount of market distortion can be minimized further.

Welfare is also cheap. It'll cost $5000/year to a welfare recipient in USA, for example. However, we need to remember that the recipients' lifestyle worth only $500. The other $4500 goes to implicit welfare due to higher living costs. That implicit welfare includes minimum wage, immigrations laws, and food subsidy, or protections.

If somehow a straight forward explicit welfare program can replace all relatively more evil governments' interventions, then capitalists are probably better of not opposing welfare so much. Even Milton Friedman supports schemes called guaranteed minimum income, which is like welfare but with much less market distortion.

That's not where the similarity ends. One of the main creeds of capitalism is that consent and competition should be preferred over force. Without that consent, anyone can simply make us choose to make our self worst of under the pretext that it is for our own good. In fact, most laws against consensual acts can be traced down to protection of some disgruntled competitors often done under the pretext of the consenting parties' own good.

Anti prostitution and anti polygamy laws, for example, is there to ration females to poor dumb males under the pretext of protecting the consenting women. Of course, all natural resources tend to be rationed somewhat proportional to ones' voting power. And that does explain why democracy and anti polygamy laws go hand in hand too. One man one vote soon leads to one man one wife.

Well, at least Matt Ridley agrees with me and he's a well known mainstream scientific researchers. I guess that's also why so many uncompetitive people want to ensure that evolution theory is not taught in school. You can also read a famous psikiatrist book, "The road less traveled," you'll see that life long monogamous marriage is just a trap to prevent highly desirable people from being available to those who they want more, and romance is just the lure to that trap.

On the women side, anti pornography laws is really meant to prevent highly desirable women from advertising her assets and hence protecting less pretty women from the higher industry standard a public display of superior desirability might cause. Countries that embrace porn tend to have prettier women. Where did all the unsexy ones go? They're all shifting out of the gene pool, and hence are doing their best to oppose porn preaching religious doctrines that men should judge women based on any features but beauty, which they can't offer.

Another issue is consent. Welfare program is not consensual; however, it's relatively more consensual then civil war. In ancient time, when we have different ideological opinions, we end up killing each other to proof who are "right." The Catholic would kill the Gnostic, the Sunni would kill the Shiah. One King would kill the other. A younger prince will argue that the older prince is demon. Might makes right.

Such differences of opinions are of course solved with war, which is a very cost inefficient way to know who're "right." However it does work in some subjective practical sense. If we look in the past and try to figure out whether the Gnostic or the Catholic is the one that's heretical or "right" respectively, we need only to see who won. The Gnostics are slaughtered, so they must be the heretic, or do they? At least I bet there are way more people in the world that think that way than the other way around, excluding me actually.

It doesn't matter how many books many institutionalized religions burned, how much restrictions of freedom of speech and irrationality they embraced, how many witnesses they snuffed outs and all other techniques that would not have stand the scrutiny of a peer reviewed scientific journal, or even a reasonable jury in the court of law. Too many people don't believe who are right and reasonable, they believe who are mighty. Right or wrong, the win will always become right anyway.

Now, under democratic context, we don't kill those who oppose us, rather we try to persuade enough people to join our cause. How do we persuade them? By money of course. Welfare program is then a reasonably cost efficient method to buy votes.

When too many people are on a side, we will sort of know that going to war will hurt the other side; hence we comply anyway with the whim of majority avoiding the costly alternatives. While not ideal, this is indeed how right and wrong is really decided, proper assessments of each sides' bargaining position and mutually cherished compromised line of war, plus a bunch of lies covering what's going on to safe each sides' face.

No matter how noble the purpose, lies and prejudices lead to misunderstanding, that leads to more war. Hence, the best contribution is simply to unmask all lies.

All in all, peaceful democracy is indeed a more cost efficient ways to measure ones' bargaining position. While democracy often lead to decisions opposites of freedom, like popularly supported victimless crime, income tax, and welfare, it's indeed relatively more cost efficient than civil war.

That's not when the coherency end. Various natural laws restrict various possible political outcomes. We can't expect a stone will fly to the sky when we drop it as much as we cannot expect a human to be generally unselfish. If we want to kill our enemies, we'll do well dropping a big stone on top of our enemies head rather than dropping the stone on top of our own head expecting the stone to somewhat magically fly to the enemies head.

The same way, we can't demand market distortion and expect that the best and brightest among us to still magically be a nice tax payer rather than dictators and corruptors. In a country where selling porn or building a good franchise chain is more difficult and less lucrative than becoming a dictator, guess what the smart would end up doing? Ask Saddam.

If we want rich and prosperous countries, we must know that it will and only will happen when we properly align individuals' interests with productivity.

Such coherency tends to make certain things come in package with another. We can expect that moving electric field will induce magnetic field. The same way, in life, we observe similar things. Communism and socialism, for example, always come in package with dictatorship and corruptions when smart people realize that being dictators pay more than building a business empire.

To the opposite capitalistic countries comes in package with softer deals for losers, such as, guess what, welfare.

We know from our economic classes that free market capitalism brings prosperity within market mechanism. However, it turns out that the prosperity that free market brings also profit the less successful beyond market mechanism. Capitalism and the prosperity that come with it tend to facilitate ideological changes in ways that benefit the less successful. One such ideological change is the popular support for losers' benefits. One such benefit is, guess what, welfare.

The most obvious samples of such ideological shifts the free market bring are the elimination of slavery in US. What happened? As usual, the northern part of America is an industrial country. At that time, steel industries are relatively more modern than the farming industry. Higher tech industry increase labors' productivity. When labor's productivity goes up, entrepreneurs will want to hire as many workers as possible. Hence, labors' salary will go up. This will kill of industries with less labor's productivity. At the end, the marginal productivity of labors in the least productive industry will go up. That value is labors' salary.

Under competitive equilibrium, the more productive and efficient a person is, the more he benefits everyone in the chain of productivity except those similar to him. Hence, an entrepreneurs coming up with ways to improve labors' productivity would benefit everyone, including workers and consumers, at the expense of other entrepreneurs and capitalists. Read that Karl Marx!

Then what? When labors' salary goes up, obviously labors will move to the employers that pay them higher. Hence, farm labors in the south want to move to the north. They can't do so legally though because they were slaves. Hence, the northern capitalists in US want to free slaves so they can hire more workers. And then the southern capitalists in US want to keep slavery. This then results in war. The bigger the labors' productivity, the more intensive capitalists have to free slaves. The more supporters there will be on a cause the more likely the cause won. Hence, slaves were freed.

Unfortunately, people still want to help losers and buy votes from those who are too expensive and too stubborn to switch. That explains why the farms in US gets subsidy.

If losing means not as successful as the other, then there will always be losers. However, we see how free market shifts the worlds' system in ways that benefits the losers too. Unlike the commies' propaganda, capitalism does not cause or even enlarge disparity of wealth. Capitalism only changes the way such disparity are earned to the benefits of all.

At the end of the warring states period in China, the king of Chin, Shih Huang Ti, and his prime minister, Li Si were the winner. Within one generation they have all their family slaughtered. If that's what winning means, what did losing means in pre-capitalistic countries? In ancient time, losing meant having all the males slaughtered, enslaved, or castrated and all the females raped and winning means risking your whole family slaughtered by rebels. In socialists countries the rich are corruptors and dictators that slice each other throats while the poor are starving.

Now, thanks to the prosperity only free market can bring, losing means they can leave on welfare, with plenty of chance to climb back and proof their worth, like J. K. Rowling. Now, slaves are so free and highly paid thanks to increase in labors' productivity. In fact, when slave jobs are moving to China under globalization, slaves in US refused to be emancipated and want to keep their slave jobs in US rather than evolving into entrepreneurs. So, much for the land of the free and the place of the brave. Some people don't mind dying for what they believe in but are too scared to start a business. Evolutions will fix that I guess.

Free market gives abundances to everyone. The benefits the free market brings benefit those less capable from being successful not only within the system but also through non market mechanism, like the ending of slavery and the start of reverse slavery we call welfare. But how do those really work? Is there a general principle?

Each of us is greedy and selfish that we want as many as possible for us. Humans' greed and selfishness is an undisputable scientific facts, as sure as the sun rise in the east, as sure as a stone will fall to the ground pulled by gravity. We're not just greedy and selfish. Greed and selfishness doesn't explain all the war, suffering, and poverty we face.

In fact, greed is good. Properly aligned, under free market, the greatest among us shall be the one productively providing the best service to the most customers. Blessed be the productive because they'll be rich. This will encourage higher and higher standard of living that we are currently enjoying.

Free market allows those who serve more to grow richer. To those who have more profit, to those more capital are given. Even kingdom of heaven don't mind using this nice positive feedback effect. Who needs new deals to break up companies?

Also, women prefer the rich. The next time you watch soap opera, make sure it's made in some country with the highest IQ in the world, like Hong Kong.

Free sex means richer males will consensually attract and mate with more women producing more kids. That's the whole point of getting rich by the way. Duh?

In fact, that's what being a living human male is all about:

1. Gain control ship of as much money or power as possible.

2. Attract or in anyway acquire as many females as possible.

3. Make kids.

4. Use that kids as tools to make grand children.

You bet it's right because it's science. Of course, they don't teach this important fact in biology class because government interfere in education.

Hence, when we're free, without genocide, without war, even with humanitarians aids given to appease enemies, the meek will indeed inherit the earth.

More than greedy and selfish, some humans are simply not humans because they embrace the root of all evil, envy. That explains why we have so many laws against mutually beneficial consensual acts and governments regulations to protect us from our own choices. The truth is, all those laws and restrictions are more often not there to protect stupid people from making mistakes. All such laws are there to prevent the smart from making the right choices.

That's why, for example, every body has to move equally slowly in school, to prevent the smart from moving faster. That's why various reproductive techniques are politically incorrect proportional to the expected quality of genetic material that will be duplicated. In particular, life long monogamous marriage, free sex, prostitution, polygamy, and cloning are sequences that both have increasingly expected value of genetic quality outcome and politically incorrectness.

In Europe and China, the smart monks are encouraged not to get married. When some minority groups don't buy the bullshit and hence greatly improving their productively earned wealth and genetic quality, such minority groups somehow become victims of genocide.

Life is like a real time strategy games. That means when we're not at war, we're in a race. That's simply how we evolve. Morality, religions, and ideologies, are stuffs created by really smart people to persuade us to run backward.

Peace means we're in a race. Freedom means we are in a competition. Some people just don't want to compete. Hence, they craft lies and prejudices against those who are in front preventing progress to prosperity.

I'll tell you the scientific truth. It's from the fruit we knows the tree. Anyone opposing free trades and globalization is more evil than Hitler or Nazi. If only Japan and German could have acquired natural resources through consensual peaceful trade, Nazism wouldn't have been popular there and Hitler wouldn't have risen to power. With his mass hypnotic skills, he may have ended up as seminar speaker I guess.

If only those who had wanted to incite the Second World War see all the miracles and prosperity the free market brings, they would have repented and embrace free market. Yet, after all the prosperity and wealth the free market is bringing to all of us, still many people choose to oppose competition, and hence, miss-properly align our interests from productivity. That is the cause of all evil in the world.

All causes opposing free market can be negotiated and appeased. However, if the very thing that a group of people want to prevent is the success of the others, then the situation is pretty much kill or be killed zero sum game.

How does such situation usually end up? What would be our optimum solutions for such situation?

Under normal circumstances, an optimum solution of any business decisions is a solution where the marginal revenue equals to the marginal costs. Hence, in a zero sum game, each party will try to maximize its benefit to that point. Sometimes, the marginal costs have a spike. There is a certain point where increasing a resources allocation beyond a certain point will create adverse costs. For example, increasing the number of labors will increase revenue.

After a certain point, increasing one additional labor will mean buying a new machine or building a new factory. We may end up choosing to do it, we may not. In either case, discretions are the better part of the valor when it comes to that line.

The same way, in most countries, each of us can increase our profits using property we own or consensually rent. When we maximize our profit that way, the public will, ideally and some times truly, not interfere, and defend us from being prevented to enjoy our "rights" by others. However, when we start using others' property to maximize our gain, say by stealing, public opinions may shift from protecting us to against us.

Hence, the choice whether we should steal or not depends on the extra costs of crossing the politically correctness line of war. If a person sees that the potential gain justifies the increase costs of public support shifts, he'll still steal and make a great career out of it. Otherwise he'll stop stealing while coming up with a pretext to justify his cowardly decisions, such as morality.

But what do the people choose their reaction to a specific act like stealing? They do so based on their sense of fairness, justice, and right-wrong discernment. How do people get that sense? From ideology. The ideology, religions, or whatever, then decides the line of war where the rest of us should consider before crossing. But how does the line gets drawn? By estimates of bargaining position.

Let's examine an example. Is the King (or Queen?) of England the King of France? Don't know. How do we know? In the beginning, a ruling class from France went to England and become king of England. Then they lost control of France. Hence, king of England wanted to take back the controls they have lost. Well, such conflicts are solved by war. In this particular case, the war lasted 100 years.

The British attacked France and successfully route knights with long bows. Then, the Frances stroke back driving the British back to their isolated islands. However, the France cannot move further and go all the way to attack British because of the Strait of Dover separating the two nations. Finally both sides realized that the straits somehow became the sacred line of war. It's not auspicious to cross the line of war for either side. The France, having more army and larger population would beat up the British on land, and the British being stronger at sea can always repulsed France sea invasion. Hence, we got peace.

Such natural separators like straits and mountains explain why Europeans are divided into many different countries. The Chinese, not having that natural line of war, end up getting united all the time.

Now, let's get back to the question whether welfare is part of capitalism. If all of us have just enough food, and some people don't work, what would we end up doing to those who are not productive?

Humans' basic instincts and preferences lead to gene pool survival. When food is scarce, such as when the people demand centralized planning, it would serve ones' gene pool survival to slaughter the parasites rather than sharing food to them. That's because sharing food to those who do not earn it means starving ones own self. In fact, humans will kill each other to literally eat each other when food is scarce. Such is what happened in China and Rusia when centralized planning, governments' intervention in economy, and prejudices against successful capitalists became the norm.

However, when food and money are abundance, such as when the people embrace free market, fighting the parasites might cause more gene pool survival lost than feeding them. On the other hand, simply giving and yielding toward threaten will motivate people to keep pushing us around. Moreover, giving in to those who can use force against us will motivate countries to build arms rather than say, better video games.

Hence, one possible strategy to minimize open war while still properly aligning ones interest with other individuals around them is to give to those who ask nicely and ask less. As free market brings a lot of abundance, those who are needy can be appeased much more cheaply than those who are envy, and hence, we got welfare program.

To be frank, I'd rather see the unproductive people have bigger TV rather than letting them make more kids. It's more humane, and cheaper. Guess what? Most people that know they're not very capable either would rather have that too.

Back to the France vs British. If only both sides have realized the true bargaining positions of each, they wouldn't have to resort to such expensive 100 years war right? The thing is, the 100 years war are the most credible and accurate ways to measure ones' bargaining position. War shows which one is stronger, and hence leads to a mutual understanding of where the line of war might be.

If only we can wave our gun and scare the enemies, it'll be great. However, the only threats that are credible are those actually done.

How do we know a cause's bargaining position? Democracy might give some light by counting the number of those who are in favor or against what we consider lesser evil. However, number counting can be deceiving. We hold this truth with plenty of evidences, that humans are inherently different.

We have difference capability and preferences, and hence different choices and outcome. It's useless to lay net in front of anything with wings. Those who are genetically predestined to be successful will get rich anyway whether through honest capitalistic means or through dictatorship.

Those who are small in numbers can hence be quite strong. Preventing the smart from making money honestly will then turn them into corruptors and dictators. When the Chileans demand to prosecute their entrepreneurs, they end up getting a dictator, the way any country that demand slavery over freedom deserves. Fortunately, Pinochet are relatively benign compared to others dictator and embrace free market giving the miraculous prosperity that the Chilean now enjoy.

Now, US government arrested his daughter for a crime of tax evasion. An act that wouldn't have been a crime if making honest money is free. The miracle of Chili becomes the model of China's moving to free market. It also helps to end communism all over the world peacefully. If capitalists fail to show thanks to Pinochet family, I don't know what would happen to all of us.

So, beyond number counting, the more accurate ways are then through skirmishes. When people cross the public's opinion line of war and we don't strike back, the line of war will shift against the coward by precedence. By fighting back, we'll then have a more accurate knowledge of which one the public would agree with.

Hence, it's very important to retaliate to what others do to us, either good or bad. It's a pleasure to serve my friends, it's also a pleasure to wipe out envy enemies that are on our ways, should my friends wish or don't mind.

When a fraudster tricks my brother over $3,900, my main concern is not to get my money back. My main concern is to get the fraudster to jail even if that will costs far more money than the $3,900. When a thief steals my money on 2001, my concern is also not to get my property back. What's just is to encourage the whole world to post any thieves conviction records on the net to prevent further larcenies.

It makes me wonder though. Why people consider it cruel to damage a thief or a fraudster' reputation? The mere acts of making honest money are punishable by income tax. When Everett O. Lasher makes an argument in court, the case leads to $5000 fine, and understandably, a suicide. The mere acts of successfully fending of ones' home from thieves lead to a life long jail term for Tony Martin. Thousands would march against WTO demanding harsh laws to punish those exercising consensual trades. In Iran, the mere acts of switching religions can lead to death penalty.

In Indonesia, new laws are being drafted giving years in prison for kissing in public. Of course, public rape during May riot are still far from being punished.

This while murderers of Vincent Chin went free without jail term. Thousands would march to end death penalty against murderers. In Indonesia, religious fundamentalists can come to a house and destroy properties from houses providing consensual entertainment with polices watching. Those people often get away or lightly punish.

If consensual productive acts are punished while damaging inconsensual forces are not, soon, all highly productive people would end up in gas chamber after the next Cultural Revolution, or what ever. Those who are left are those smart enough to be dictators enslaving the rest of us.

Prejudices reminds me of an envy old hag that's so determined to ruin my reputation for being friendly to her and her friends, after her own friendly communication. I never intended to fraud anyone or steal her money yet I got my reputation ruined. I am very disappointed to see that there are people in the world that want to bring me down more than they want to bring down a thief.

I have tried to resolve the issue privately by suggesting to that thing that she's really not important enough for anyone to pretend to be her friend. Moreover, I didn't need her as a friend. All this was just a damage-less misunderstanding caused by her own friendly communication which I could simply publicly straighten out. At least, it used to be.

However, that vermin really wished to get the issue public telling lies that she never communicated with me, possibly to boost that things' feeling of importance her genes deny her. Well, if she got so mad over a few friendly introductions, I can only wonder what that thing would do when it finds out that her true envy natures are revealed to 55000 newsgroups several times. It'll happen again and again whenever I feel like.

Hence, just look for "envy vermin" on the net to find out what's really going on including what she said privatedly. Let the public decide who are more honest, rational, scientific, and straightforward. Let the market decides which one are worthy and who are worthless. It's a great mistake to ever consider such thing as a friend, a mistake no body should do. It's her kind that turns people of from making money productively.

Hopefully we can undermine public opinions against all form of envy motivated lies and prejudices. At the end, we'll greatly weaken laws against victimless crime and easily out compete all envy people out of the gene pool. That'll ensure that the free fair market competition would reign over war when all lies and prejudices against those more successful are gone.

Now that being said, I want to move all jobs that can be done online to Asia, especially, copy writers. Take advantage of the value difference and leverage like hell is how we all make money in any system. Who's with me?

Free market is all merciful and all compassionate. At the end, even those that oppose free market will benefits from free trades.

Is superboot still the best boot selector ?

Are there any others out there that people rank ?

Thanks,

Alan.

I have a Matrix M128 card with the original Atari drivers. Does anyone
know if this will work in a Mega STe? Also I noticed the card has a 15
pin connector (SVGA style) although I'm pretty sure this is a mono

card. Does anyone know what the pin out is for this connector? Is the
output ECL by any chance?

Cheers

Ian.

Personaly I prefer Xboot. I'm using it since the early days. Xboot
never have let me down. I'm still using it on the Hades.

Yes, that's definitely worth trying. Ensure that not only the HD but also the TT is terminated because both physical ends of the SCSI chain must be terminated. If only one HD is connected to the TT, the TT must be terminated because it is located at one end of the chain.
The terminators are located on the TT's motherboard, close to the SCSI port.

```

If you are missing the resistors from the MBO you can always pop a
terminator on the external SCSI port.

Hallo,

I'm searching for specifications of the 1st word document format.
Does anyone know where to find them?

Thanks in advance

Karsten

The TT has only one HD at the moment so wouldnt the terminators on the board be already terminated? I will obviously check though.

Ok... leads me on to the next question... what are my options on HDs?
I have a brand new IBM 36gb sat doing nothing, it has the ultra scsi
68 pin connection but could I use it with a pin changer?

Yex, you can use any SCSI-2/SCSI-3 drive, as long as you have a pin
changer. Since these pin changers are not Atari-specific it is usually
no problem to buy one.

Hi,

I recenty picked up an Atari STe which was fitted with a Veloce+
accelerator. This seems to work fine - but I wondered if anyone had
any drivers or docs for this device? I've found a few review articles
on
the web, but no drivers or other info.

Thanks

Ian.

Hi,

Not sure about ZIP drive, but I have had some Seagate SCSI tape drives
work with it.

Rory

Hi,

Which version have you got? I guess if it can do tape units it
should be able to do zips. Mine just has the option to image backup
to floppy.

Dave

>
> What, just plug a terminator in the 25pin port?
>

The terminators on the MBO are removed when you have a device on the external bus. This device should be terminated, or there should be a seperate terminator after it. If you have:-

1) No terminators on the motherboard
(becuase the machine once had external devices and no longer does)
2) No terminating resistor pack in the spares drawer
3) No external devices connected

Then putting a 25-pin terminator on the external SCSI port should correctly
terminate the bus. The practice is common on SUN Sparc Stations...

Speaking of 1st Word....

I have 1st Word Plus from GST Software.
Version is 3.20TT
for the STF/STFM/STE/Mega ST/TT  as Labeled on the disk.
It is in new condition, have never used it.

Was wondering if anyone still uses it and would it make a good editor to
use with programs like Newsie/Oasis to write/edit E-Mail and etc?

I have a complete boxed version of Dyna Cadd.
Not sure what version it is.
Any way inside the box is a small grey 9 pin female plug
with a Label that says Dyna Cadd Atari ST/TT on it.

Whats it for and were does it go??

Have version 3.1G, Is this program similar to PageStream?

If so, which one is better and does That's Write 3 run on a Falcon?

And is version 2.2 of PageStream the last version before they released the final cut down version?

If so, what if any, are the differences in the software.

There are alot of these.  I have used SuperBoot on all types of Ataris
including
the Falcon with a CT2B, and it works well.

However, there are a few more for the Falcon, that have special features.

I believe one was called Start em Up,  but not sure if It was for all
Ataris or not, but I believe it was.

Closer to Papyrus IIRC. It uses SpeedoGDOS. But it is a document processor.
>
> If so, which one is better and does That's Write 3 run on a

It does run on the Falcon. But you need NVDI or SpeedoGDOS.
>

What are the sympotms of a stock Falcon if the clock patch is not installed? Are the modifications on the CzubaTech site are recommended to do or they only just CT60 specific?

Thanks

The modification on my web site seems to work fine on stock falcon...
It is :
- 33 ohms resistors on R216, R221 & R222 (some sotck falcon have 0 ohm on R221).
- 68 ohms resistor to ground as line terminator on the SDMA clk trace juste before the entry of the SDMA clock pin

The 74F04 or 08 modification is not recommended for CT60/63, even at 16 Mhz falcon bus (not boosted).

Regards

Mine symptoms were random SCSI locking when transfering more data.. Locking was also connected with DMA load, so if i used higher resolutions in more colors, locking was worse... hdd led just lit and all freezed till i reboot.... I had revJ board tried all sorts of patches back then, noone worked correctly, but on end CT2 fixed it for good :) However i didnt try patch from Rodolphe, worth a try, his solutions usual work... On other hand, revJ seems to be odd board :)

```

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

internet

Hi,

I try to connect to the net with iconnect 1.7 (and 1.8 too) and N.aes 2 but it's impossible. Iconnect run correctly but PPP negociation failed when I try to connect to my ISP. I have no problem with same config in MagiC.

Anyone can help me ?

Thanks a lot,

Cyril.

Anyone have an NTSC copy of this game? This is one of the later chess games to come out for the Atari ST and has several nice features. I have an original disk (along with box and manual) but it can no longer be read. I found the files on DBUG but that is a PAL-only version and tells me to contact my supplier for an NTSC one. Great advice, if this was still 1991. The program does not use an executable boot sector so running a 50Mhz boot disk first was no help.

What rsdeamon.prg do yu use? The latest version work only with MagiC. Try it
with the old one.

RSDAEMON.NEW\RSDAEMON.PRG   5835 Bytes

Hi,

The software "Eureka" is updated on its WEB page. It is a
"2D Graph Describer and 3D Modeller". You will fetch it at :

<http://eureka.atari.org/eurka605.zip>
That is the Complete Common Edition
<http://eureka.atari.org/eurka020.zip>
Is the Complete 68020 Edition
<http://eureka.atari.org/eurkafpu.zip>
Is the Limited FPU Edition
<http://eureka.atari.org/eurklite.zip>
Is the Lite Edition, working on early ST with 720kb floppy

<http://eureka.atari.org/lib_dgem.zip>
Are Dynamic Libraries Extensions for Eureka
<http://eureka.atari.org/tiny045.zip>
Is the OpenGL Extension (requires previous package)

With this release you can better generate 3D slideshows.

I wish you big fun with this new STuff !

Best regards,

-- Fran=E7ois LE COAT

```

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

Hello,

Once again, only one bugfix: the R_MapPlane error has been fixed, it was caused by an uninitialized memory buffer. I know this error was triggering very often.

Greetings everyone!

Here are the lucky, the few, the proud winners of this months prizes at The DarkForce! BBS:

April 2006
1. Magic Phrazes - Slor wins the $25.00 prize
2. ST Magazine - Sthelier wins the free 3 mag. subscription

Congratulations to our winners!

Also, here are next months prizes:

May 2006
1. Final Frontier II - one lucky winner, or *team* will win the $25.00 prize. Team members will divide up winnings. If the game goes into more than one month, that months prize money will be included. As sysop, I will be playing, but am exempt from winning, or joining any team.
2. ST Magazine - some lucky Atari caller will win a free 3 mag. subscription.

Good luck to all! :-)

```

Folks, Alison Challis, of PEST fame has graciously offered to
donate a PEST mouse adapter for the monthly prize giveaway
at The DarkForce! BBS.

So this month, just for you Atarians - we are giving away
a PEST mouse adapter!

Remember, it only takes 1 call each month to qualify, but
the more times you call, the more chances you have to
win.

We use a small program called "winner" that randomly
picks a name from the list of callers each month...

Good luck to all! :-)

So, I got new Falcon revison 005 and with 68Ohms resistor I got SCSI PROBLEM (!?) in 060 mode. How it can be?

Was going thru some of my Atari Stuff and came upon
a Mega STE/TT Keyboard. The colour of letters/numbers and
etc on the keys are a Blue/Green.

And the keyboard case is white. Not a off white or
light grey.

Is this the normal colour?

For a TT, yes. The MegaSTE is grey and the TT is bone/cream. Quite nice
I think.

Mark

DNS issue.. everything is fine now.

The 4 DNS servers I have with my registar.. I thought was a good
backup. I guess not.

Hello,

I am looking for an Atari Falcon with 4Mo RAM and an internal harddrive
(any size).

I still to this day code on the ST in my sparetime (mostly game related
stuff), and I'd really like to try myself at the Falcon.

Please email me at michaelbricout(at)hotmail.com

I am located in Eastern Canada.

Thanks,
Michael

hey mike , saluet ?? i think thats french .
i live in ontario, i code for the atari as well .
what you been workin on?
do you give advice for novice coders , and for those of us which use basic
or gfa?
i'm always busy coding midi stuff.

well i don't really know about falcons ,but its similar to a pc as far as i
can tell,
all i have is st stf ste mega st4,

charles
oh and the ever powerfull emulator "steem" which is very steady and easy to
manage.
i find atari stuff every where and will relay over to you if any falcon
related.

Salut Charles ;)

The Falcon was the last of the ST series. Some kind of an ST on steroid. It has all of the STE's features (it is mostly backward compatible with the older ST series), but it has a 16 Mhz 68030 CPU, a DSP, much better sound and GFX hardware (it has svga graphic modes, can be hooked-up to a VGA monitor, etc), an internal IDE hardrive, an external SCSI port, LAN, etc. Truly a fantastic machine.

I usually do game and demo-style code in Assembly. I have an ongoing project with a group of local retrocoders. Perhaps we'll release something, some day. Feel free to shoot any question you may have (you can email me if you like), I'll do my best to try and help.

Cheers,
Michael

Yikes!   That's one expensive BBS you're running there. The cash prizes
alone are an outlay of $300 per year.   I don't know what the magazine
subscriptions cost, but running the DarkForce BBS is certainly not cheap.

Yes, thats a typo - thanks for pointing it out.

BTW, everythings back to normal now, and everyone can simply use:

"bbs.darkforce.org".

I've never seen a TT close up before, but I do have a Mega STE,
so this extra keyboard is for a TT then. Cool.

I like the look of it too.
For awhile there, I thought I had a rare keyboard. :)

I have heard of a Falcon with Green Letters on the keys.

Thanks,

You will really enjoy a Falcon.  I started out on a 1040STe and after I got
my
first Falcon, I was really hooked. Lots of nice programs for it.
I have 6 Falcons and a few motherboards for parts.  Plus alot of aftermarket
hardware/upgrades/software. Sorry none are for sale at the moment.

I do hope you find a Falcon in good working order, and maybe you can code
some stuff especially for it. We can use all the programmers we can get.

Hi, I dissaembled an atari falcon and I am left with two black spacers
and a copper spacer. Not sure where they should be placed on the
motherboard. Can someone help or provide photos/diagram for me? thanks.

That almost sounds like the "risers" that hold up the floppy drive, except there are 3 of the black spacers for that.

Check to see if the narrow end of each fits into the bottom of the floppy, and the wider end fits into the motherboard itself.

Other than that, I'm afraid I don't know without actually seeing them

Any chance you could snap a pic or something?

HTHs.

Hi,

Looking for any spare Falcon case parts for a rescue. I have various parts but would welcome anything. In particular the bottom of the Falcon case, the bracket/spacers for mounting the HD, and a keyboard.

Anything considered.

Email me on

rwe-4cif
at
iximail.com

Cheers

Ian

Hi all,

I have a set of these binders and diskettes...

Has anyone scanned these in yet?
Did they have errors in them?
What is the status of owning them?

I have a duplex scanner so scanning them wouldnt be too bad. Is there
any call for them?

I've tried to OCR a page. There were too many spelling errors to
correct. PDF would have to be the way to go (unless somebody has nimble
fingers and a TON of free time).

Ideas?

Rory

These are definately the floppy drive holders. One of them is brass,
which provides an earth to the floppy. You know it never crossed my
mind, but these things must have cost atari a fortune to make...

Aly,

Sorry for the delay. Check your e-mail. Thank you very much again.

I hope everyone orders a PeST or two from Aly now. You never know when
you may need one...

Phil

Happened here 2 times (v4 legal and v5 illegal) after a untrigered crash (once during booting with "system overschreiben" errror). Also i do know other ppl with MBR problems. In most cases, if not all, hdd probs started after Magic has crashed. Afaik it was also all on Falcons, but i would not give a hand in fire for that claim :)

been there, done that, several times. First turn off power. Next, do whatever you have to do to get the drive bay loose and flipped back. Unplug the hard drive. Put stuff back until you can turn TT power back on, do so, with HDDriver in the A drive. Or, with ICDBOOT in the A drive. Do what is necessary to run the boot program.

Carefully, plug the drive back in. The power connector will go part way backwards, and make sparks. Do not make sparks. Then run the device check program, and see if the drive is found. If so, you have a booted machine and a found drive, and you can do something to it.

If not, you have a source of good refrigerator magnets.

I do not think that MagiC would write to the root sector at all. Why
should an operating system do that? The root sector does not containt
any data relevant for the OS, which only knows about the partition data.
The only software accessing the root sector is software like hard disk
tools and hard disk driver installation programs.

By the way, when using a hard disk driver like HDDRIVER, which offers
write protection for the root sector, one should activate this feature.
be it with or without MagiC.

Hi all,

Won't be able to get at the Atari internals until next week. I'll
try all suggestions and get back to the group with the results.

Thanks
Dave.

Yes you are correct Ekkehard. I have done this before using HS Sentry. It works great in removing those files, but it does not work under Magic and it does not like long file names. I really hope that Anodnye will soon make Diamond Edge long-file-name compatible. Roger said that would happen soon, but he first wanted to get out the DVD version of CD Writer Suite which is just about finished.

I would boot up the TT using a floppy, run HDDriver and then edit the auto folder of the C partition.

I have some dysan DSDD disks in sealed hard plastic case, in sets of 10 cases with 10 disks each for 100 disks total. If anyone is interested they are $20 for the 100 in hard cases of 10 each, price will include media mail shipping the whole box is a bit heavy.

Let me know if you want any, these have been stored in ac storage and I've used them myself with some astra 2001 drives which are true double density and they work flawlessy.

I rather not list on ebay so let me know asap if anyone is interested $20 shipped per box of 10 hard cases total of 100 sealed new disks. The hard cases also elminate your disk storage problems.

Sorry, try to find someone in the USA to get it for you then have them ship
over to you. Thanks.

By chance I saw a machine that does just that on Monday, its a hand held
printer where the cartridges contain the heatshrink (3:1 ratio) and I
presume the ink, if you go to the Farnell website
(http://uk.farnell.com/jsp/home/homepage.jsp) and enter T107M into the
search you can find out more if your interested although starting at �80 its
probably not cost effective for you.

This happened for me a lot too, but only on 520ST and Mega ST, never on
Mega STe, TT or Falcon. So put that in your pipe and smoke it? ;) Then
again I remember going on vacation and coming back to a crashed overheated
hard disk that was powering my BBS, so it's not 100% sure to blame MagiC
in those cases either.

Thanks,
Mark

As I already mentioned, in order to destroy the root sector contents
MagiC would have to write on this sector explicitly. But why should
MagiC contain code to write to the root sector? And why should this code
be executed rather by random?
This just does not make any sense.

Hi All,

The PeST_040 PS2 mouse interface is ready for sale on eBay;
http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8802372433

For those that haven't heard of PeST, it's a buy it now interface which plugs straight into your Atari ST and allows you to use a standard PS2 mouse as would be used on your Windows PC. No extra bits of configuration or wires are required and the device works straight out of the box. Several scaling modes are also available to either speed up or slow down your mouse pointer.

There are about 100 users of the older PeST_030 out there, the 030 version was slightly larger and this new version is smaller using SMD components.

Delivery is available worldwide via tracked post and takes about 6-7 working days to ship to the USA, I'm in the UK.

Thanks so much to all those that bought and supported me before, without whom these new ones wouldn't be possible.

All the best,

techie_alison

Glad he can get them in the UK. Doesn't seem to be the hard plastic storage
case though.

By the way if this is the ebay item you're referring to: 8800678628

They are nowhere near my price. He is charging about $8 for 10 disks, I am charging $20 for 10 hard plastic cases of 10 disks each (10 hard plastic cases, totalling 100 disks with shipping included).

The label on the box Dysan 100 refers to it's 100% error free slogan, not 100 disks in that box it's only 10 as you can see because it's also quite slim.

I am practically giving these away since I am moving and don't want to store them in a garage where heat may get them, they have been in ac storage with some of my other collections for the longest while and I saved 2 boxes of 100 each for myself. At present I have 4 boxes of 100 each left. Sold 4 boxes of 100 already. This is a no brainer if you need disks and are in the USA.

We're offering all the latest factory pressed high quality dvd movies,
ps2, psp and xbox silvers with factory printed colour inserts at
fantastic prices, whether for personal use or reselling. We're shipping
worldwide with various shipping methods. For resellers, please contact
us for bulk discounts.

For a complete list and prices, please email us at
movieworld@time.net.my

(Please state the type of list that you want and tell us your location
as the prices varies for different locations. If you're reseller,
please state the quantity you wish to order per shipment and we'll
quote you a wholesale price depending on the quantity ordered.)

* If you need references, we can provide them to you.

Uwe Seimet wrote:

> This just does not make any sense.

Sense or no sense: Magic booting, report "system overschreiben" and disk is not recognisable after that. I doubt much of other apps are executed during booting. Happened to me twice and i know other ppl with same problem, in most cases after 68000 error.. I dont claim Magic itself is quilty per say, but why after crashes in TOS or MiNT i never reproduced the error? Problems with FAT etc yes, never had MBR error...

After all this started the thread:

>Have an Atari TT which usually has just the vanilla GEM desktop
>running on it. �The other day I decided to boot it using MagiC which
>is installed on the C drive. �MagiC promptly crashed the machine and
>I'm now unable to boot from the HD.

Disk was okay until crash, since OS was booted....

Also Magic (atleast in v5) didnt support file locking and deleting the active app folder and exiting app, did result in crashing and sometimes in partiton lost..   Im not telling that to dismiss Magic, im just stating what i experienced and what is potentialy dangerous to do....

Yep, I noticed that afterwards :) Yours are super cheap. It's certainly an
adventure selling overseas that's for sure, about �7-8 here sending
something that weighs 150g, mind you, once at that threshold, something
weighing close to 1Kg is about �9. Untracked stuff is about �2-3.

I am not sure. Several days ago a problem with MyMail was reported that
appears to be a bug in AV-protocol implementation in TeraDesk. I would
like to locate and correct that first. Also, I still didn't really test

the fix for displaying size of large disk partitions.

Regards;

I think people who need disks will try to look for brand new. At least it's what I would want. Used 5.25" disks are usually percieved to be unreliable. However you might want to list on ebay for what your disks contain on them software-wise. That might have some interest.

Yes it is awsome. I am one of the beta testers and the beta works great. I
heard there is going to be a DVD version of Aniplay. That will be so great to
have that.

I'm a beta tester too Edward. :-)

I'd certainly love to see a DVD version of Aniplay.

"System �berschrieben" means that the binary code of MagiC was destroyed
by a process writing to MagiC's internal memory.
Note that you can prevent this by using the MAGTOROM software (TT and
Falcon only) which can be downloaded for free from my website.

Yes, i was using that and it did fix the problem... Im not using Magic anymore, but would suggest users to use MAGTOROM, and to be carefull when deleting files, especialy folders of an active app, since it may lead to potential data loss.. (usualy deleting folder of an active app is an error, mistake in a hurry etc...)

```

Nope, just tried "60games.zip" and that came out blank too.
(not empty, blank, as in, full of nothing but chr$(0) (NUL) chars)

```

Hello all;

On 11 Apr 2006 08:06:35 , Odd Skancke wrote:

> 0.963? That is the old program version of the AES, right?

I would like to note that this seems to be probably the last version that works correctly on ST-series computers. It does not appear to be a matter of insufficient memory (e.g. a 030 version of xaaes can be run on a 4MB TT)- but the '000' XaAES binaries of newer releases invariantly seem to crash at startup, with 'illegal instruction' faults. Have these binaries ever been really tested on MC68000 machines?

>XaAES can only use the resolutions available via the VDI, which means
>you need to know how to configure your screen-enhancer. If you let us
>know what you use we may be able to help :)

Odd, do you intend to implement resolution change into shel_write() function in XaAES? Then at least the 'standard' Falcon/ST video modes would be easily set, e.g. from TeraDesk, and the screen enhancers should then probably work as well. As XaAES already can change to 'standard' video resolutions from the task manager, it would probably be an almost trivial matter to enable it through shel_write(), wouldn't it? Now that newest MyAES supports such call to shel_write(), XaAES is the only AES V4 left without this capability.

>> Desktop piccys and other eye candy? Is everyone using Thing? Can
>> Teradesk do it?

No, TeraDesk can not draw desktop background pictures and there are no plans to implement that. Personally, I think that desktop pictures are in fact distracting to the user, and a waste of system resources. However, it would probably be possible for an interested party to code a separate utility that would insert a background picture into the root screen object. MyAES contains a background-picture capability, though not as a separate module.

Btw. Mark, I saw in xaaes forum that you inquired about restoration of the palette after some old ill-behaving programs. Try setting the 'Save palette' option in Video options of TeraDesk. It has two effects: 1) the palette is saved at program start and restored later, and 2) the palette is saved and loaded together with desktop configuration file. It may happen, that you may have to set the particular misbehaving program as 'no multitask' in TeraDesk in order for this palette restoration to work (please tell me if it works).

TeraDesk -may- use progdef objects for drawing some elements in dialogs: various button types and dialog titles are drawn as progdefs -only if- TeraDesk concludes that an AES does not know of them (i.e. if appl_getinfo() about understanding WHITEBAK flag is negative). Through an environment variable one can force the use of these progdefs, if desired. Also, at least some FTEXT-type objects in TeraDesk are always drawn as progdefs (e.g. scrolled editable fields for long names).

>Is there intelligent life in outer space?

Possibly, though on planet Earth it has not been found so far.

>And the correct forum for XaAES discussions is
>the forum on xaaes.atari.org :-)

Btw. I tried to register to that, and got an information that I would be sent an e-mail shortly, to tell me how to activate the account- but no mail ever came. Any suggestions?

regards;

Djordje Vukovic

I agree, it is distracting and a waste of resources. But nice every now
and then;-)

Odd has added the ability to restore the palette using 'Ctrl+alt+P'
works great. Will give your trick a go too, thanks.

There was a post on the forum about that today I think.

Mark

BTW Odd has been fixing bugs faster than I can find them, try getting
help like that at M$.

I have listed more of the items Im clearing out on Ebay.  I have so
much more and keep finding more. Hope to list another 25-30 auctions
tomorrow. Ther are over 20 Atari items Check them out at:
http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZatariQ5fonly

BTW, Shipping will be combined if possible

Thanks, AO

421 error: Too many users connected. :(

I would be happy to put a mirror up on my website at
[ http://www.electronics-engineer.com/ ] (or .net or .org)
It has a lot of unused storage and bandwidth, and I haven't
really done anything useful with it.

Hello,

Just took delivery of 180 new PCBs today, the other 120 or so went over the last 6 months. Thanks to all those that bought and who are reading this.

This is the new version of the boards, much much smaller using SMD components this time; http://www.retro.dial.pipex.com/Pest_040/pest_040.jpg

There's still some of the larger PeST left on eBay at the moment; http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8794824308 If you did want one of these new small ones just bid and let me know which to send, there's about 10 watchers there at the moment but will relist as I don't think the 3 will sell in the final moments.

In some ways Chris and I are finding it mildly amusing reading some of the other Atari forums where someone will slate PeST and go off to develop their own PS2 interface shouting about it all along the way, which ends up with numerous components, capacitors, crystals, and then you have to build the thing yourself. PeST is the smallest, neatest, simplest that you can get.

High praise is given to Eiffel if anyone wants to jump in there, although
you can't just 'buy' it and have it two days later.

What colour heatshrink should I use for this new PeST??? Red? Yellow?
Green? Blue? or stick with Black?

Aly x

Well, I appreciate all your efforts. :-)

Personally, I'd stick with black or even original Atari gray. If you can
get that one?

Thanks!

An even more elegant solution to the Atari mouse issue. Thank you for your efforts.

Atari grey would be best. If you want to be fancy, how about stenciling a multi-colored fuji on white? ;-)

I bought and am well satisfied with the old version. It's never caused a
problem from day 1. Can't ask for more than that. WHo cares about cosmetics?
I don't. If it works, that's good enough.

Hi Galen,

Just picked up the heatshrink, we're going multicoloured. Will just do these at random I think unless anyone has a preference.

Brilliant to hear that you're getting on well. It's a personal reward somewhat to see the thing all over the world, I've finally achieved something and helped some people out!! :) Yayyyyyy!!!

You know, I'm tempted to do these new ones 1/2 price for any of the existing users, not a sales gimmick mind, more to look after the people who believed in me. Also I've done it in such a way that if ever I update the firmware I can re-flash old PeSTs on request. Only issue I've ever found is with one TT, haven't a clue what it is, still sorting that one out with a Logic Analyser right now, guy has offered to pay for the extra PeSTs but I stick with how I would like to be treated by someone selling me something.

Thanks so much to all, you've cheered me up in life a little bit. :)

Aly xx

It is broke up, but easy to grab 'n paste into a browser.

I tend to like darker colors personally, so gray, black, etc, looks
alright, but I do like the other posters idea of a fancy Fuji branded
white one... :-)

I must be blind. :-)

I can't find an actual link to download it from. I've got the registered version of 1.98a...does this version have the source code? Thats what I was looking for.

Thanks.

Nevermind, I forgot I had to login before I could see the download link.

Thanks, I'm off to look it over.

Okay, I just extracted it and glanced through it quickly.

So...the source code is -not- included? I had hoped it would be there, so
some minor updates could be done. That date error is the worst thing,
right off hand. Accepting (built-in) speeds higher than 19.2k would be
nice as well.

Guess I'll keep on dreaming.

Dear Atarians, to all those who signed up for my E-Mailing list. Who asked for a Heads Up concerning New Atari stuff. I've created a New catalog named NEWINBOX.TXT this Catalog is different. It's 80 Columns, alphabetized by title and shows maker. Like MICROprose. And unlike my other 40 column catalogs, most entries are one line followed by a blank line. So I'm keeping it short. For Now it holds all my NEW in the BOX Games and other Software for the ST. Next I'll be moving all my NEW in the BOX Atari stock to this NEW Catalog. Hardware/ Games-Software & Books. 8 Bit, ST and Jaguar. Request NEWINBOX.TXT in E-Mail or use my Links below. 1st come 1st serve! E-Mail: Atari@aracnet.com

Hey LP!

I think you're referring to HSMODEM and on the hardware side, the RSVE
serial port upgrade.

Those are very good from what I've seen, but I'd just like to have Express
do it itself, ya know?

Can't have everything though, I guess. :-)

Probably $100,000 each for the rights to print the fuji as im sure its still
under copyright somewhere ;-)

hmmm, printing on heatshrik eh..... *ponders*...

techie_alison wrote:

> In some ways Chris and I are finding it mildly amusing reading some of the other Atari forums where someone will slate PeST and go off to develop their own PS2 interface shouting about it all along the way, which ends up with numerous components, capacitors, crystals, and then you have to build the thing yourself.

Yeah, but at least I know I'll actually have a PS/2 mouse interface IN MY HANDS. I hope the other interface does get done, so I don't have to give any more money to that crook Chris Swinson at CPS Electronics who stole almost US$100 from me.

Ali, contrary to the glowing reviews, you also have 3 pissed (pested?) off and unhappy customers here who still do not have the 3 PeSTs that I ordered last year.

I wish I could write a glowing review for the PeST (which sounds like an excellent product), but this ordeal has left a bad impression on this project. I supported the PeST project from the very beginning when this was first announced. I enjoyed reading the updates on your progress and seeing the extraordinary progress being made. It was great excitement to see it done, so I supported your efforts by pre-ordering the PeST through the CPS Electronics web store (since they were taking care of the international orders, and so that PCBs can be ordered at a good price).

When the shipment didn't arrive for well over a month, I contacted Chris at CPS on the status. He said he would check up on it. So I waited another couple weeks, and I even went to the Post Office to see if they had it by chance, but no luck. I then asked Chris for an update. He asked if I ordered it with tracking. Huh? The shipping rate included tracking, right? Nope! He said it would be too much trouble for him, so he sends my US$100 worth of merchandise to me using standard (read: CHEAPEST!) shipping rate. What the F***?! Who would send US$100 worth of product overseas without any tracking?! Apparently, Chris. And, he did this WITHOUT informing the customer - me! Note that I would have gladly paid extra for shipping with tracking if Chris would have stated that the UKP2.50 shipping that was AUTOMATICALLY tacked on to any PeST order was only for standard shipping. However, he DOES NOT LIST any other shipping option!!!

Unfortunately, he continues this DECEPTIVE shipping cost practice today. Check out the website yourself at http://pest.atari.org . It STILL DOES NOT show what shipping rate he uses. He still does NOT state that he uses standard postage (i.e. the cheapest rate!), and he still does NOT state that one must ask him if they want to use a shipping rate with tracking.

Really, how does he expect INTERNATIONAL customers to know what the shipping rates are in the UK? From his messages, he sounds like a strict businessman yet he doesn't have the business sense to make sure the INTERNATIONAL customer is given a choice of shipping options, or to make sure to pick a default shipping method that can guarantee that the package will arrive at the customers' door overseas. He continues not to take responsibility for his mistake of not clearly stating the shipping method. It is be stupid to assume that most international customers know shipping rates of other countries. I bet most US residents do not know the UK shipping rates, and I bet most UK residents don't know the US shipping rates either.

Good businesspeople help their customers (especially those not familiar with the territory) to make the correct purchases. Actually, Ali, a good example is your method of selling the PeST. Your website has good information, but most importantly, your ordering page CLEARLY LISTS the many shipping options that your customers can choose to make the correct shipping choice. That is not the case with the CPS site. You're stuck with cheap shipping or nothing at all. I wish you handled international orders instead of the crooked "businessman" at CPS Electronics. To all those who did receive your PeSTs from Chris/CPS, consider yourself LUCKY.

Ali, again, I appreciate your efforts to the Atari community and the PeST sounds like an excellent product, but I can't continue supporting it until I get the PeSTs that I paid for using my hard-earned money.

I know you can't control Chris (or can you? :-)), but I supported the PeST project from the beginning, and kept with the updates, and felt the excitement when it was done. I did my good deed in helping the project and the Atari community by pre-ordering the PeST. What happens? I get screwed!   It's sad to see your extraordinary efforts overshadowed by a crook like Chris Swinson/CPS Electronics who steals their customers' money and uses deceptive shipping practices.

I hope you can find another supplier more honest than Chris/CPS, so that your products don't get mired in his dishonest "business" practices. You just may regain three happy customers.

- Phil

Would that work with a Mega STe and its enhanced ports? I don't have a TT
but I've got a very nice Mega STe.

BTW, did you see that last TT that went on Ebay? It had accessories, but
man...$650!

I think you're right, but I think its the 8bit version.

Hi Phil,

I'll sort that out, drop me a personal mail. I was loosely aware of this in that Chris had mentioned it and was dealing with it.

If you send me your home address I'll make it good myself. Chris and I operately separately as far as the selling goes, if you've paid for it I want you to have them. It's more than money for me. :)

Aly

Greetings all,

Have an Atari TT which usually has just the vanilla GEM desktop running on it. The other day I decided to boot it using MagiC which is installed on the C drive. MagiC promptly crashed the machine and I'm now unable to boot from the HD.

Tried holding C, D, E... when booting to force a boot from one of those drives but it does not work. Boots fine from floppy but can't access the "corrupt" drives. Knife ST only reports 'A' as being avalble.

HD does make a noise but the light stays off.

Anyone got any ideas on how to get back onto the 'C' drive or tools I might use to see if the HD is fried?

Thanks in advance

Dave

Not a expert on this, but have you tried installing HD driver on a floppy and holding down ALT to force booting from floppy ? I managed to corrupt the driver.sys on my C: drive and couldn't access my drives, if you boot from a fresh floppy with HD driver installed on it then try acessing your drivers.... I only used HD8 driver, you should be able to detect the drive from there... install the updated HD driver to floppy first then you can again boot from floppy and hopefully access your hard drive... at that point you can install a new driver to the C: drive...

HTH.
Chris

Hi Chris,

I've got HD Driver version 6. Machine boots up with the floppy disk but all the menu options which access the HD report 'no devices found'. This is all from within HDDRUTIL.

There's no option or program on the disk that allows installation to floppy. Is there any reason for me booting from a "fresh floppy" as opposed to the original disk?

I suppose the HD might have died but it does seem a bit of a coincidence.

Cheers
Dave

First you should check whether your drive is recognized when running an ID check. Only when the drive is found will a hard disk driver be able to find any partitions on it.

In case your drive is found but no partitions can be accessed the drive's root sector might be corrupted. Depending on how the drive was partitioned the root sector information can either be restored automatically by the software used for partitioning the drive or by other tools.

Well I am just going on my HD floppy, the drivers were there but it will not
be setup to "take control" of my hard drive.. So you load up HD8 from floppy
and auto detect... then install the driver to floppy... when you reboot the
driver is configured to read your drive so you then can access your

partitions... just running the driver on its own will not work until you do
all the setup stuff..

> I suppose the HD might have died but it does seem a bit of a
> coincidence.
>

Make sure it comes up when you boot from floppy that HD8 is actually
loading.. then load the util prg and search for devices... by the sounds of
it , if its comes up "not devices found" then it sounds like a hardware
issue. Check your cables....

good luck.
chris

Hello Uwe,

ID Check reports devices ACSI 0...7 & SCSI 0...7.1, no errors.

The drives(s) was partitioned using HD Driver v6.

Does it look like I'm looking at a corrupted hard disk driver?

Cheers
Dave

Just a thought... If the hard disk driver on 'C' got corrupted then
is there any reason I can't boot from 'D'...'F'? I've tried holding
down the keys 'D'...'F' on various boot attempts.

Magic is known to fuckup MBR (master boot record) sometimes.. It may be
the cas with you, drive is unusable until u fix the MBR. Back in old days
we did that in DOS...

only the C: drive has the driver, once the C: drive is lost the other drives are lost with it.

MagiC is known for that? Hmm, I have been using MagiC, including beta
versions, for years, and it never destroyed my root sector.

blah@blah.com wrote:

> ID Check reports devices ACSI 0...7 & SCSI 0...7.1, no errors.

Does the ID check report any *devices*, i.e. devices names? Or does it just give you the list of bus names, without anything else?
Note that the ID check in HDDRIVER 8.1 is more sophisticated, and for checking IDs the demo version of HDDRIVER 8.1 (http://www.seimet.de/hddriver_english.html) will also do. It's probably a good idea to use the demo for the check in your case.

> The drives(s) was partitioned using HD Driver v6.
>
> Does it look like I'm looking at a corrupted hard disk driver?

First we have to know whether any device is actually found, see my note above. If no device is found there is something wrong with the hardware. If the hard disk device is found but no partitions are detected the root sector may be corrupted. Current versions of HDDRIVER write a duplicate of the root sector to the drive, which can be used to restore the actual root sector. I am not sure anymore, though, if HDDRIVER 6 also does it this way, because it is rather old. The manual provides information on that.

As already mentioned by others the bootable hard disk driver is usually (but not necessarily) located on partition C:. If the root sector is corrupted no partition data is available, i.e. the hard disk driver cannot be loaded and booting from hard disk fails.

There is no mechanism to install a hard disk driver on a floppy, by the way. Just start the driver from the AUTO folder (hddriver.prg is located there) when booting or by double-clicking it.

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

Just wanted to add something else to this thread...

Its odd, but when I bootup in standard TOS, it behaves just like we talked
about above. The clock is off, and will return to a faulty date even if
you set it after booting up, after a short time, or whenever an app is run.

When I bootup in MINT/Thing though, the behavior changes. The clock is
wrong at first, of course, but once I set it, it then retains the correct
time until I power off.

I wonder what the difference is?

Of course, this is just another reason to use/endorse MINT. :-)

Thanks for all the responses.

Ok still having problems. I've downloaded the demo version of HD Driver 8.1 and copied to a floppy drive.

Put HDDRIVER.PRG & the associated (?) .UPL file in the auto folder, computer freezes when booting up. All I get to see is the copyright message.

Runnning HDDRIVER.PRG by double clicking from a non-auto folder pretty much has the same result.

Running HDDRUTIL I get the foloowing messages:

* No XDHI support
* No SCSI support

Once it's finished loading all the options under 'Harddisk' are greyed out.

Menu Tools | Device check shows...

BUS0 Atari ACSI
BUS1 Atari SCSI

Then freezes up.

Tools | Autoconfiguring has the same result.

ID Check from the HD Driver 6 disk reports ACSI 0...7 & SCSI 0...7.1 with *no* descriptions.

Sorry if this is all a bit lame but there is no manual on the v6 disk, its an original but the previous owner seems to have added other stuff to it.

Cheers
Dave

I'm not 100% sure which software was used to partition the drive
originally. I thought it was HD Driver 6 but I've just found an old
boot disk (again does not boot) which has ICD 6 on it.

Dave

Hi,
Not had a problem in the past copying from FD to HD.

OK, this means that most likely something is wrong with your hardware.
The fact that your machine freezes might be an indication that something
is wrong with your TT, not with your hard disk drive.
I suggest that you disconnect your drive, and then run the device check
once again. Your machine should not freeze.

Hello scene friends,

so our dream becomes reality -- Noise will happen in less than week!
This is last reminder from us, we've got some additional information:

1. Prizes

Yeah, as we promised, we've got sponsorhip for the prizes so here you are! It's guaranted we can give you at least:

- 1 x 17"LCD
- 2x 1GB MP3 players
- 1xHDD
- 1xDVD
- 1-3 "small" MP3 players
- 9x Eiffel v4
- 1x external DSP clock 44.1 kHz for Falcon
- Atari T-Shirts, Noise T-shirts, Atari cups, packs of 5.25" disks and some others atari souvenirs
- and of course: cash! Everything we've got from entrance fees will be used for winners! See Noise homepage for more info!

As you can see a trip to Noise could be pretty profitable ;)

2. Security

Don't fear to bring anything you want! We hired a professional security guys! They will guard our stuff all the time!

3. Additional goodies

Believe or not but thanks to our sponsor we could arrange something you wont see at other parties! Free bowling and food on saturday! Yes, we plan not to only be closed in one hall but we think it would be nice to relax a little bit so we prepared this action for you! Again thanks to our sponsor!

4. Last info

Don't forget usual things (sleep bag, money, atari stuff, good mood ...) and don't hesistate to contact us in case of some problem! Tomorow we are going to update "Traveling" section (how to get at Noise from bus station, railway station etc)

So, at the end, we'd like to invite you once again... remember this party is one-go action, there wont be any further Noise volume. We did all our best to make sure you wont bore and you just really enjoy our party. We set entrance fee at the lowest possible boundary (compare with this year's Outline -- 45/55 Euro vs 15 Euro!), we prepare many cool events and competitions so... it will be *really* worth to visit it.

Don't miss this chance to meet with the folks from 8/16/32bit scene, the chance to see the best demos from all atari platforms, the chance to see some rare atari stuff and of course -- to meet a friendly guys and have a good time!

Regards,
Your Noisy team
http://noise.atari.org

See you in Slovakia!

Hi All,

I found a lot of old Atari stuff in the attic, so I am now unloading that
to make room.

Hopefully someone can be interested in the following,

ICD Link2 (tested)
http://cgi.ebay.fr/ws/eBayISAPI.dll?ViewItem&item=8794564908

Spectre GCR - Gadgets by Small (no floppy cable)
http://cgi.ebay.fr/ws/eBayISAPI.dll?ViewItem&item=8794564924
(the manual itself is a masterpiece of hacker genius IMHO)

AT/Speed  (turn a MegaST into a genuine 286, ain't that great ! :)
http://cgi.ebay.fr/ws/eBayISAPI.dll?ViewItem&item=8794564883

Items are in France but can be shipped to Europe or the USA (shipment
charge to be adjusted accordingly).
```

Any questions or remarks, please email me at
  armadillo2024 at free.fr

Cheers,

Fabrice

Afternoon all, decided to have another whack at Xaaes. So far so good. I used Easymint/Xaaes 963 and then installed the latest version of Teradesk. That works fine. Now I am up to installing Xaaes' latest build. So that should be a challenge. Last time I tried it, was a disaster. So far so good tho.

A few questions tho, resolution changes under Xaaes is there any easy way to get 800x600@256 colours or 640x480@65536 colours? I am using a towered Falcon/CT2/NVDI5. I have the flags set for 640x480@256 colours atm.

Desktop piccys and other eye candy? Is everyone using Thing? Can Teradesk do it?

I keep getting a Wdialog error from Cops when firing it up as well using Xaaes/Teradesk. Any ideas there? For now I have reverted back to Xcontrol.

What/where is the definitive forum for such things? Is there an end to world hunger? Is there intelligent life in outer space?

Any answers to the simple ones would be appreciated;-)

Cheers

Mark

0.963? That is the old program version of the AES, right? (xaaes.prg or
so?)

>
> build. So that should be a challenge. Last time I tried it, was a

Oh? What happened then? Did you attempt installing the XaAES kernel module then?

> A few questions tho, resolution changes under Xaaes is there any easy way to get 800x600@256 colours or 640x480@65536 colours? I am using a towered Falcon/CT2/NVDI5. I have the flags set for 640x480@256 colours atm.

XaAES can only use the resolutions available via the VDI, which means you need to know how to configure your screen-enhancer. If you let us know what you use we may be able to help :)

> Desktop piccys and other eye candy? Is everyone using Thing? Can Teradesk do it?

I use Thing most of the time. But since I started work on real themes, the AES object renderer part, I found that Thing uses progdef's (a special AES object type that makes the AES call user-functions) to draw own AES objects. Effectively killing the idea of themes. I'll try to contact Thomas Binder regarding this. I think Teradesk is clean in this respect, but I havent dont extensive tests.

> I keep getting a Wdialog error from Cops when firing it up as well using Xaaes/Teradesk. Any ideas there? For now I have reverted back to Xcontrol. What/where is the definitive forum for such things? Is there an end to world hunger? Is there intelligent life in outer space?

What errors do you get? And the correct forum for XaAES discussions is the forum on xaaes.atari.org :-)

>
> Any answers to the simple ones would be appreciated;-)

Hope the above did the trick ;-)

Best Regards,
Odd Skancke

Yup thats it. The one used with the easymint installer. I decided to get
it working before upgrading the kernal etc.

Yes. I did it last year. I can't recal exactly what happened but it
failed and I hadn't backed up my boot drive. I have now;-) I suspect it
was me being in a hurry again, and not spending enough time RTFM.

Wdailog needs to be run... or something along those lines. I suspect it
is because I am starting it from the Auto folder rather than mint.cnf?

And the correct forum for XaAES discussions is
> the forum on xaaes.atari.org :-)

I'm on my way. Thanks.

 There is absolutely no connection anymore between the kernel module and
the old program version of XaAES :)

RTFM surely do raise your chances ;-)

Okie, I think that if you ask questions on the XaAES forum found on
xaaes.atari.org, you will get answers :)

Never EVER use Wdialog.prg under XaAES! wdialog is a hacked hack which
will render a FreeMiNT/XaAES system unstable. XaAES have own
implementation of most wdialog functions.

I think the reason why there are pagues every now and then... mother
nature tries to clean up a bit when there are too many who needs to eat.
However, we've 'mutated', so the world is like a body whose immunesystem
doesnt stand a chance...

Best Regards,
Odd Skancke

Hello, Edward!

ESBJ> Is there a good program that will display ghost files so I can
ESBJ> delete them?

What kind of files do you regard as "ghost" files?

- hidden or system files?
  -> most desktops can be configured to show them
- damaged directory entries?
- "files" allocating space (in the FAT) but having no directory entries?
  -> here I'd propose tools like Diskus or simple disc monitors

Regards,

Alexander

Control Panels

Please run the system extension WDIALOG, which is supplied with NVDI, or
use the multitasking sytem Magic4.

I have disabled it, but no change.

Hello,

Two small fixes this time:
- '@' character is not usable in GEM configuration dialog for TTP command line, fixed.
- Also reserve 256 KB ST-RAM as default instead of 128 KB.

Happy belated birthday, Ben.   Also, good to see that you're finally making
the leap to 80 columns.   Welcome to the new millenium.

A friend of mine has a 1040STf with a problem regarding the internal floppy. I don't know what he did to it, but almost 2 years ago when we had to move and the ST went to his apartment (long story how it was his, but I had it at my house), and when I set it up, it worked fine. Then he moved it to another room some time after that.

Now when he turns it on, the drive makes a noise, it does indeed spin the disk, but as I observed, the drive moves the head(s) back and forth, then at some point the desktop gives up and displays 2 drive icons and the Trash icon.

The disk in question used to boot up with a boot sector and virus detector thingy, then load a mouse accelerator, then load the desktop inf file, then go.

I tried another drive but the drive was dead, so I'm going to try one more drive that I can think of before I have to give up and tell him to buy a replacement. When I tried the apparently dead drive, the desktop wouldn't even come up with any drive icons at all.

The 1040STf is stock with absolutely no modifications. I hope there's no problem with the section of the power supply for the drive. I wonder if he dropped it or something while moving things and just won't admit it. At any rate, I figure it'll cost him about $50 or so for a new internal drive. It's got an external drive that for all I know works.

If the drive has a speed control thingy that I know is in the drives for the Atari 8-bits, I don't know where it is. I don't understand how this thing went out of spec just sitting around. I don't recall the internal drive making a noise before, so he's done something that FUBARed it.

Any help on what could be wrong, good info on relatively cheap(er) priced replacements... replies here are probably what will happen, or you can email me directly (sorta preferred).

I managed to replace the internal drive on my 1040STf that yet another friend has with another 720K mech, but I don't count on finding those anymore at HAMfests for $5. ^.^

Later. and thanks.

Maybe try formatting a blank disk after the ST has crawled it to the
desktop. This may identify a dead drive. The other (less than
conventional) solution would be to give the ST the 1inch drop but if you
have it open already just push all of the chips in one by one.

You did of course make sure that the ribbon cable was plugged into the
replacement drive the right way round? Ataris are odd that way!

Also you need to reconfigure PC floppy drives to be ID0, they're
normally set to be 1.

Any normal 1.44 PC drive will work if you change the ID select.

No desktop icons is normally a deeper problem witht he drive, plugging the cable in the wrong way can do that. oh and of course 1.44 drive actually need the cable plugging in backwards so you may have to do some plastic snapping to get it to fit.... Not all 720k drives will be set to the correct ID....

looking at the other posts here... Didn't Alison do a document about drives and mods ?

Chris

should this guy do more diagnostics?
why doesn't he use sys-info take paremeters into account ,then save tos img with tos.ram
then load into emulator and compare tos from his computer to tos from emulator ... at this point i ataris do that ,make little sound before reliezing no boot disk but analysing more could direct to further trouble...psugesting internal circuit defect or something.

Ello you :)

Mmmm, yeah, sort of wrote something but never finished it. ang on..
http://www.retro.dial.pipex.com/fdcompat/stfdds.txt Now I don't want to
hear any criticism or comeback on that as it's just something I toyed with,
everyone can sod off!! :)

Easiest way for the OP is trial and error. If the original drive is a
double sided and it's failed, it may just format single sided disks on it's
way out.

Hmm, not even constructive criticism? ;-)

It's an interesting doc, but the ascii tables dont line up in my
browser <ducks to avoid flying tableware> though its easy enough to
read.

Thanks for publishing it :-)

I bought a new floppy for my Hades from ATY Computers. It works great, but it
cost me around $70. Still, it was worth it.

Basically all of the above. I can get the BoxKite file selector to display,
but I cannot delete them.

Hi Edward!

>I can get the BoxKite file selector to display, but I cannot delete
>them.

If you have Diskus (or perhaps SED), you can enter the directory and
rename or delete the files by directly editing the directory entries.
But caution, it's quite easy to do great damage to your data if you
don't know exactly what you are doing!

With best regards
Ekkehard

Hi Andrew,

AF>I figure it'll cost him about $50 or so for a new internal drive.
that seems very expensive to me. I think 15 Euro (~20 US-$) should do.

Almost any PC flopy drive will do. Maybe the drive is to be jumpered half-size (720 bytes instead of the PC's usual 1.44Kb). I recommend Epson or Chinon, but I don`t know if these brands still exist nor produce floppy drives, for most PCs are delivered without floppy drives.

AF>If the drive has a speed control thingy that I know is in the drives
AF>for the Atari 8-bits, I don't know where it is.
I don't think you can control the speed that has to be 300 rpm.

AF>Now when he turns it on, the drive makes a noise, it does indeed spin
AF>the disk,
That means power is there, no doubt.

AF>then at some point the desktop gives up and displays 2 drive icons and
AF>the Trash icon.
That's quite normal and means that no readable disk has been found.

I'd do the following: Format a disk on any computer, PC or Atari don't mind, for the 720 format. Leave it empty and give your drive another try. Then you will get the known desktop (two drive and one trash icon), change the desktop (add another icon, move one icon...), save the desktop, that will give you one new file (DESKTOP.INF) on the empty disk, and reboot.

If the new desktop appears, all but your original disk is fine. If not, you really have a floppy drive problem.

Und TTsch�
ps

Xref: g2news1.google.com comp.sys.atari.st:2549

Hi all,

Following the recent progress in XaAES, aICQ is now available in a new release where some things have been adjusted to work and look smoother together with XaAES. For example, aICQ is now rendered okay also when the AES draws textures as background on 3d-objects. In addition to this, the tabs has been equipped with a discrete 3d-look that should kick in if you run AtarICQ in >=256 colour mode.

Users with scrollwheel mice might be interested in knowing that aICQ now responds to WM_ARROWED, and also supports XaAES WHL_AROWWHEEL mode causing in which the AES sends extended WM_ARROWED messages to further optimise the scrolling.

In addition to the above, a couple of bugs has also been found and fixed. (For more details, see below)

To skip the details, and go to download site: http://www.ataricq.org

----- New in AtarICQ 0.168 ---

* aICQ's message window is now tweaked to look at its best when the dialog background is using a bitmap texture. As a result of this, the feature to configure the background fill colour from within the preferences has been removed. If you wish to tweak the background colour to a solid fill colour, you should however be able to do so using your favourit RSC-editor.

* Small adjustment made to popups, fixing appearance under latest XaAES.

* Scrolling behaviour changed slightly: When the slider is not located at its bottom position, the text will not scroll to bottom when new messages are coming in. If located at bottom => follow bottom.

* In addition to the above, aICQ will now need the slider to be

located at its bottom position in order to consider messages to be read.

* The TABs in the message window are now equipped with a discrete 3D-look when your setup can use >=256 colours. The active tab will also be enlarged slightly to further allow you to distinguish it from the unselected ones.

* AtarICQ will now redirect WM_ARROWED messages to the vertical sliders in both contact list and message window. When a mouse scrollwheel is rotated XaAES sends WM_ARROWED messages even to windows that don't have a native slider. This means that at least under XaAES you can now use your scrollwheel to scroll inside aICQ windows. AtarICQ also supports XaAES extended scrollwheel messages, using the WHL_AROWWHEEL mode.

* A bug that would cause display problems in the text input field in the message window has been fixed. It would only hit if the user had installed a custom system font, which had different char width/height than the original Atari font. Should be fixed now.

* Discovered a nasty bug that would cause very bad memory corruption upon certain incoming messages. The reason was that certain clients are using a single ascii-13 to indicate a rowbreak.
  Should be fixed now.

Regards,

/Joakim

Hi all,

Since a couple of somewhat serious issues in latest alpha release has been found, there is now an alpha update available for you to download. It also has a couple of new additions. These are the most important changes:

* Fixed bug causing COPS's CPX windows to disappear right after opening.

* New AES keyboard combo, CTRL+ALT+P, will restore palette to system default in colour modes 256 or less.

* New AES keyboard combo, CTRL+ALT+D, make a snapshot (needs external app, see readme.txt)

* Fixed a glitch where using CLOSER widget to close Taskmanager window released all information it contained.

* Taskmanager showed selected entries as black text on black background - fixed.

+even more fixes. See docs for details.

http://xaaes.atariforge.net

Lol, we share a lot of coloquilisms. I live in Melbourne tho, so you are
forgiven. But I will never support the Wallabies. Go the All Blacks.  I
dunno 20 million people and the can't even get a decent Rugby team
together ;-).

BTW the latest Xaaes updates work a treat. Fixed heaps of niggly problems.

Mark

Hi, Edward!

EF> If you have Diskus (or perhaps SED), you can enter the directory and
EF> rename or delete the files by directly editing the directory entries.

But before you do so you should check wether the directory entries are
related to a (trace of) allocated data clusters.

Or even better: Let your tool check the integrity of the file system...

EF> But caution, it's quite easy to do great damage to your data if you
EF> don't know exactly what you are doing!

Right, if you don't utilise advanced functionality of your tool then
it's almost essential to have the background. Any sector monitor software
that I have used so far gives appropriate warnings at least...

Regards,

Alexander

See my other post... Alas, checking the QL directory, I'm not too sure how good the site is...
I just tried a couple of the zip files there, and they both came back broken.
(I think he screwed up his encoding on the page and marked them as text/html or something, downloading in forced binary mode didn't help either)

Just checked, there were some broken archives in some of the sub directories for that machine, removed 'em - will restore later from another backup.

cheers,

Lance

Back in 1999, when Rich Sanchez closed official support for BBS Express! ST, he released a final version into the public domain. I don't have a copy of this release but would love to...

I've been trolling the Atari FTP sites (Belgian, Umich, etc) for the last month and have been unable to find it. I've been looking in Networking, Modem, BBS, etc,... I've also downloaded the index files from these sites and searched them. No luck.

Does anyone know where a copy of this release can be found? Any/all help appreciated. Thank you.

 go to,
www.atarisales.com
 just click on the st/tt/falcon/clones page, scroll down till you see
the highlighted title
falcon bird of prey, click it on the see the falcon 060 bird of prey
page.
thanks for looking,

lance

What is exactly on this disk, for $20 I want to know...

BTW, for those who cannot be bothered to click through:

I think it is not the "falcon 060 bird of prey" but it contains:
- Bonus atari ADS
- Video
- Audio
- Images

(this list is on the coverimage)

Yeah, but this isnt enough detail. Not for 20 bucks.

I have the Studio Module, not sure about STyle Trax. (Will have to check)

Was wondering if anyone knows how many add on modules were created and
made available for Cubase/Cubase Audio Falcon?

I'd like to see a list posted or an e-mail with what was available.

I have a nice Cubase Audio Falcon collection and am just getting into the
extras
of the program. Would like to get any modules that I don't already have.

The Lynx would have Rocked the gaming world, had it's potential been fully realized, I mean compare it to it's contemporary, the Gameboy. Monochromatic green-screen to 256 colors, mono-sound to full-blown stereo, etc. but we can all blame the Atari Corporation who should've been the first guys against the wall when the revolution came. They fumbled up everything, like the Jaguar, it's tech was unbeatable at the time, Aliens vs. Predator for instance. And the Atari ST, while enjoying a certain popularity, never fully realized its potential either, getting mostly hurridly done Amiga-ports instead of focused ST efforts. (There were some notable exceptions, like Wings of Death for instance) Atari even developed the first CD-rom for home computers, early in the nineties, but the only games made for it was a port of lame space-simulator and a interactive inventory list for a Boing 747, then they suddenly decided to drop it. Atari Corp killed the Atari machines. Bah. Had they had better management, we'd all be writing and reading this on the new Atari 4000 KFT and playing VR games with our Mindlink-visors later on.

The MAIN reason the Lynx failed was because of the low battery life.
Had it had a screen like the GBA that hardly sucked any energy allowing
people to play for hours and hours, it might very well have dominated.

I don't agree. Sega's Game Gear was a very successfull product, and had
similar specs to the lynx. Interestingly it also killed batteries, but
at a much higher rate. Sega did their marketing better, thats all.

> The MAIN reason the Lynx failed was because of the low battery life.

Probably in the same class as the Portfolio's battery life, which was a big joke.
A couple of hours only.

Mike

The Game Gear ate batteries faster than the Lynx? That I don't recall.
I did like that the Game Gear was basically a portable SMS. I picked up
a GG and a $12 adaptor and had an instant game collection for it. Of
course, trying to play Phantasy Star on a 3 inch (or whatever) screen
wasn't the best setup. :)

Hi. Don't you mean the STacy? My understanding is that the Portfolio will
last up to 6 *weeks* on its battery power.

The STacy, on the other hand, ate batteries so bad that Atari finally
started shipped them without any, if I am remembering correctly.

Folks, we're gearing up for another round of Final Frontier 2 here at the DarkForce! BBS. We're looking to recruit more players. If you've never played FF2 before, you're in for a real treat. I'm posting the Intro here, so you can get a "feel" about what the game is like. Please be sure and read the Documentation when you play!

Final Frontier II Introduction:

As I looked up from my comm display at the alien with discolored black and green splotches all over his face, I felt a wave of pity run deep within my bowels. The tears ran down his cheeks as he sat, shaking, in the plaid Naugahyde seat beside me, slowly telling me his story.

"It was HORRIBLE," sobbed the broken humanoid." I knew I had the intestinal fortitude to handle it, being descended from Terran kings, but the atrocities committed in the FINAL FRONTIER war were just too hard to bear; especially those in THE DEAD GODS sector...that rebel DARKCHYLD's home turf!!"

'Kings? What?' I thought. I put the comm on auto and leaned back into my chair, fixing my full attention on his story.

"It all started in the general assembly right before the war," he said. "The Satharians were miffed because of Ted Turner XXXIV and his holographic

imaging colorization of something called 'I Love Lucy.' I think it had something to do with a red-haired puritan axe-murder. Anyways, distribution in the outer-rim was poor, and the Saths were literally shedding skin over it."

He leaned back in the chair with a gracefulness I had not seen in ages, picking up his tea spoon and twirling it with exaggerated movements. Anything to break

"It all seemed like a small interplanetary riot, you know, the kind that never gets any press anymore. Then that goody-goody MORDEN stepped in," He quick snorted and wiggled his nose contemptuously. "He promised the lizards he would acquire the rights to the shows and air them nationally. But instead he packed up the Saths' national treasury, stole the prime ministers wife, knocked off two holoburger stands, and, dear God, slandered the good name of the acquitted sports hero Orangutan Jumper Sampson..."

I shook my head, remembering it well. "And that's when the proverbial guano hit the gliding rotisserie blades..." I said.

"You guessed it," he continued. "Everyone went berserk, buying ships, weapons and other stuff. Interplanetary systems dissolved, governments collapsed, and

all-out chaos ensued. And that was just from the media coverage alone!"
"People started colonizing planets everywhere, trying to get a foothold of power. Dr. Scholl became a billionaire! But the thing about it was nothing was sacred," he said. "People were invading people, taking planets, and wasting each other just for kicks. It got so you had to hide in a sun's corona just to get some sleep."

"But that's when all the new developed technology started coming about," I interjected. "You know, booby-trapping derelict ships, laying mines, massive production of defense installations, trade routes and other stuff."

"Not to mention the illicit beaming of 'Sweatin' to the Oldies' onto command bridges playback consoles," he said.

I shuddered. Truly a fate worse than death...

"And that wasn't even the worst of it," the curly-haired alien said. "What about those distinguished few, ROGUE, SYSOP, MORPH and others; the real nuts! They sneaked around with weird aliases and thought no one would notice...."

"Yeah, some real unholy alliances came about because of this war," I said as I read my tactical display, looking for SPACE PIRATES. " And with the new increased galactic size, there's going to be a LOT more space to hide in.

Suddenly, the ship rocked with an explosion! Red alerts resounded across my bridge. "And shut that blasted noise off!" came a command. From the back of my mind twas some weird English-accented old man's voice. My alien copilot looked at me as if he had read my mind.

"JEAN-LUC!" we said in unison. The alien started to reach under the dash for the General Foods International Coffees, when another burst knocked him from his chair.

"Darn!" I screamed, grabbing the joystick like it was the last Pina Colada in Tahiti. I targeted the pirates with my newly-installed Photon Cannons, and blew them 10 levels past Hades.

I started to let myself relax, but I noticed something peculiar. The graceful alien had been knocked out of his seat and was being jostled about the cabin . But he was moving now, on his feet, and it looked like he was supposed to be walking forward, but instead he was moving backward.

"Just Beat me, just Beat me...." he murmured.

I started reaching for my hand-phaser, slowly and cautiously. He spun around and stopped so abruptly I thought the gravity simulators were off line.

"You wouldn't happen to have any peanut butter and bananas lying around here, would you?" he queried.

I screamed and hit the floor, grabbing my weapon. But the Prince (God help us) slid over to me like a greased proton beam and wrenched it from my hand.

"So, you figured it out, huh?" said the Prince.

I stared at him, aghast. He just smiled that weird-smile of his; it was like something out of an old beach flick.

"Yeh, it's me. One of my daddy's old fans set me free from the suspended animation chamber. And wouldn't you know it, after my daddy, Michael, and my momma, Lisa-Marie, hid all the Terran currency some years ago after collecting it from owning rights to just about everything (gasp); I'm quite rich! But I thought it would be nice to put some Thriller into your life by stealing your ship."

He started to laugh; it was a ghostly, haunting laugh, and made him throw back his head. I took the initiative and pushed his skinny 80-pound body across the floor, slamming him into the bulkhead. But he quickly recovered, and raised the phaser. Click.

"Shoot!" he exclaimed, wrenching off the battery cover, the SupraVolts falling to the ground.

I sprang forward, slamming my fist on to the escape pod eject button. The small section of the ship he was in closed off and spewed forth into space, taking the demon-spawned love-child with it. I made a silent prayer to a certain bass drum-toting pink bunny.

Collapsing on to the console, I heaved a sigh of relief. I sat up, entered some random coordinates, and warped into space. The war was getting bigger.

It was much more intense. I was going to get my fair share of the...

FINAL FRONTIER II

(Final Frontier I was just a teaser...)

* * *

Think you're bad enough to survive this NEW, VASTLY IMPROVED version of Final Frontier? No longer do you have to wait for the wusses on your board to show up and play. No longer do you have to depend upon your teammates like in S.E.E. (Shameless Plug). Want to see if you are TRULY bad enough to hang with all the pros? It's a whole new game, networked and armed to the teeth...

You know the old story...

"This is where you come in to play. You have been given a ship
and some vessels; the most that your government could give you in
this deep space area. You must, either by yourself, or with the
help of others, control at least 400 of the planets in the Outer
Rim to win this war. By colonizing and fortifying planets, you'll
be able to manufacture more goods and ships for yourself. You should
expect aggression from other ships and planets, and should not hesitate
to attack others to reach your goal of 400 of the planets. Good luck.
You'll need it.

Now live it! An expanded, networked galaxy awaits you, along with many players from all around the universe. So get ready, read the docs and new features, then let's get down to some serious arse-kicking!

See you out there in CyberSpace, friend...

Portfolio only lasted 2 hours or so while powered up IIRC. The battery
life was good for strictly pim purposes. Of course it crashed now and
again erasing all your data which is exactly what you want from a PDA..

I have a Sharp Zaurus SL-C3000 now. Very different animal and only about
200 times faster ;)

Thanks,
Mark

I googled and every site I hit went along the following lines:

"The unit is powered by three AA batteries, which last about 100
hours."

"* 30-40 hours on 3 AA batteries (about 6-8 weeks of normal use)."

So I dunno. Anyone here actually own a Portfolio and can testify to how
long the batteries last under normal use?

PS Coolest thing I did see was that the Portfolio gives a low battery
alert, the batteries can be switched out without losing data, and since
its only 3 AA batteries, its dead easy.

I might be recalling wrong. It's been a long time since I sold my pofo's.

Thanks,
Mark

Hi, Ronald!

RJH> So I dunno. Anyone here actually own a Portfolio and can testify to
RJH> how long the batteries last under normal use?

I used to power my PoFo with rechargable batteries (lower capacity than
alkaline batteries at that time plus memory effect) and they lasted for

about three weeks.

RJH> PS Coolest thing I did see was that the Portfolio gives a low battery
RJH> alert, the batteries can be switched out without losing data, and
RJH> since its only 3 AA batteries, its dead easy.

Right, that's a really nice feature :-)

Regards,

Alexander

Hey, thanks for the heads up. Some of us were wondering just how long they lasted.

> Right, that's a really nice feature :-)

Dead handy, I'd imagine.

RJH> Dead handy, I'd imagine.

The point to me was that even though the PoFo was on low batteries there still was enough time to recharge the other set of batteries - if in "suspended" mode as one would call it these days...

Regards,

Alexander

Yes, but you do the RIGHT THING !!! Save the PLANET and STOP USING ALKALINE BATTERIES !
USE RECHARGEABLE GOOD BATTERIES (Ni-MH with 2100mAh!).
Thanks for the planet and the next generations !!

Think about that :
- if put into earth, 1 alkaline battery is contamining 1 cube meter of earth for 50 years long !
- if burnt, it is very bad for air !

     Hi, Rodolphe!

RC> Yes, but you do the RIGHT THING !!! Save the PLANET and STOP USING
RC> ALKALINE BATTERIES !

Something like that was my intention when I decided to use rechargable
batteries.

RC> USE RECHARGEABLE GOOD BATTERIES (Ni-MH with 2100mAh!).

I did not use the PoFo for a long time now, but you're right, capacities
have multiplied since then..

RC> Think about that :
RC> - if put into earth, 1 alkaline battery is contamining 1 cube meter of
RC> earth for 50 years long !

Nice to know, I did not think about that in detail. In Germany batteries
are considered hazardous waste, but even that is deposed somewhere and
might turn into a source for trouble in future...

     Regards,

          Alexander

Howdy ppl,

I've updated my Frodo port. Frodo is a portable C64-emulator originally written by Christian Bauer.

Requirements:

- CT60/CT63 (Maybe AB040?)
- VIDEL-compatible graphics (F030)
- Joypad or joystick
- patience (there is no GUI yet)

Features:

- integrated debugger
- sucky sound emulation (uses YM atm)
- 60FPS operation (on my machine, at least)
- joystick/joypad support

It's been tested successfully on a CT60 (90/25Mhz), running FreeMiNT/Xaaes (latest alpha). It should work in TOS/MagiC/Naes/MyAES/Geneva too, but I haven't tested it.

Grab my port here:
http://hem.passagen.se/shoggoth/frodo

Original author:
http://frodo.cebix.net/

It really is a shame that we have been polluting (killing) the planet for the last couple of hundred years or so. What most people don't realise (or don't want to face) is that its much too late. There is nothing we can do now to prevent the earths gradual (or cataclysmic) demise. We are all guilty of this so i'm not pointing any fingers, just stating what I believe to be fact.

Happy thoughts eh? :-)

Did'nt Grundig invented the bio-battery? You could throw it in the
Trashcan. Without quicksilver, so far I remember!

Best Regards,

Daniel Mandic

The Time, when nothing anymore is.

I have here Z80, 6502, 6510, 80286, 68000, 68030, 80386, 80486, 80586
and even a new modern 80686, all magazined sortly and in order. Let
them come :)
 I am prepared. Two or more boxes (32Inch TV-SET cartons :-)) full of
Games, I played 25%!! Not to mention the 'abandoned' copyrighted
Software, from the best programmers of that time.

Kind Regards,

Daniel Mandic

What is the max Factory Baud Rate of the Mega ST's Modem Port?

And is there any software that will increase the Baud Rate when using Net/Telecomunications software?

Thanks,
phantomm@bellsouth.net

Going thru my boxes I found these, I don't use them and so hope someone here will enjoy them as much as I used to. I have some other stuff like the Atari Brand 20MB hard drive and a new 1040ste and will eventually list them. I'm moving and taking the opportunity to lighten the load especially since I don't see myself using these in the future. The PC has been taking up my free time lately.

Hey. AFAIK, the maxium speed on a stock Mega ST is still that of the standard serial port on any ST model. In other words, 19.2k...

It can be sped up with -hardware-, like the RSVE mod.

HSMODEM software corrects bugs 'n uses faster routines, but doesn't actually speed up the stock serial port (unless you count not being slower because of re-transmission errors n' such).

Hi, Coda!

C> We are all guilty of this so i'm not pointing any fingers, just stating
C> what I believe to be fact.

Sad but true. The point is that most people don't care at all. This attitude partly is enforced by our "modern" meritocratic society. If you want to be successfull you have to be fast, i.e. you have to squander ressources and implicitly to produce waste.

Globalisation is another aspect that is closely related to the stuff above.

C> Happy thoughts eh? :-)

Erm - No! :-/

Regards,

Alexander

It�s a new year which means a new CCAG Show!

Buy, sell, trade, play, and see classic video games, computers,
peripherals, memorabilia, and more at the Classic Computing and Gaming
Show (CCAG) on May 27, 2006 (and again in October, 2006) at the National
Guard Armory, 3520 Grove Ave. Lorain, Ohio from 5:00 PM - 9:00 PM.
Vendors, clubs, and collectors will be displaying and selling their
retrogaming and retrocomputing goods, from Pong and Atari to Nintendo,
Apple and IBM to Commodore and everything in between with many set up
for you to play with and explore. We have 5000+ square feet of space.
Help us fill it all up!

For more information please go to http://www.ccagshow.com/

Folks, we've had really severe weather here in the last 24 hours.

(tornadoes, high wind, intense rain, cats and dogs-living
together...<cough>, er wrong movie...) :-)

Anyways, we were without power for much of the last 24 hours. Which far
exceeds the UPS I've got on the BBS.

Our normally stable dynamic IP address changed, one of only 2 times its
changed in over a year.

Its now: 24,177.23.112

Until my server gets this updated, you'll be unable to telnet to
"bbs.darkforce.org" although the actual IP address will work.

Thanks for your patience and sorry for any inconvenience.

Hi,

My WEB site has changed its ISP. The new address is :

<http://perso.wanadoo.fr/eureka2.12/>

The ATARI.ORG address of the WEB subdomain should
follow. I wrote to the portal's support address one
week ago, and the Email forwarding should also be
redirected soon.

In the meantime, I apologize for disturbs in the service.

Best regards,

Hi all,

A new set of XaAES binaries are yet again available, and this time the
appearance is in focus!

*The object renderer can now draw textured backgrounds in =>256 colour
modes. Textures can be applied to window widgets, menus/popup menus and
3d-objects.

*XaAES can now also draw nice gradients to provide some eye-candy to eg. window title backgrounds and the likes.

*The way XaAES handles/arranges iconified windows has been improved a lot and can also be configured in great detail

*As usual, a lot of fixes and adjustments where you\'ll for example might notice that the taskmanager now can be accessed even when wind_update() has been locked

+Loads or smaller fixes and adjustments. Have fun!

The Unofficial XaAES Page: http://xaaes.atariforge.net

This XaAES development snapshot is integrated in MacAranym 0.9.3 at

     <http://eureka.atari.org/MacAranym.zip> for OSX

as you can see in the <http://eureka.atari.org/aranym.gif> picture.

It is also part of <http://eureka.atari.org/xa-my-aes.zip> that
is a boot disk image designed for all ARAnyM's host machines.

Thanks for the great work done on freeMiNT+XaAES, and all other
softwares that are included in those packs.

Greetings,

Top posting and wasting electrons

Yes, I have and use a Portfolio, and every three months or so, it tells me the batteries are low, so I change them, using the spares that live in its case until they are needed. Once and once only it crashed, and I had to retype a few words. There is, untried by me, a program named uncrash.com.

Jim

New test  results:
  - CT60@98
  - NVDI
  - XaAES
  - BLOWUP (software only)
  - Teradesk
  - Mint 1-16-3 Alpha

In protected mode, a message appears (from XaAES) saying:
  PROCESS "doom" KILLED:
  MEMORY VIOLATION. (PID 013)
  Type: private PC: 0160a964
  Addr: 000B4FE4 BP: 015C2000

In non protected mode, the game quits in different places with an error
message:
  ERROR: R_MapPlane: 19, 19 at 65536

Maybe I have a special version of Thing. It came bundled with N.Aes and
I couldn't start it with XaAes at all. I tried to contact the
developers of thing if there is a way to upgrade to the full version,
but no response came back. Do you think if there is a way to obtain the
"not only NAES" version somehow?

Oh, okay. My bad. I thought you were saying it was slow. Period.

Game plays great here...

Hi All
Following on from the Falcon Battery thread, I have found a source for the chip concerned.

I haven't fitted it or tested whether the battery is OK yet. Anyone got the pin outs for
a MK48T87B-24? The supplier didn't have any info.

If anyone else is interested I will find out how many they have. (I bought 2)

Mark.

```

Hello,

I have a fairly large collection of atari computers, and i am considering selling off some of it in order to pick up a korg polysix!

Here is what i have:

Atari Mega STE - ABSOLUTLEY MINT! no noticeable yellowing, no case cracks, gorgeous example. 4 megs of ram, 150 megabyte harddrive, keyboard in mint shape, a really great mouse (works as well as a good pc ball mouse). comes with a lot of software pre-installed, mostly music including band in the box and dr. t's kcs v5, as well as a ton of desktop publishing software.

Atari Mega ST 2 - beautiful shape! no noticeable yellowing. 2 megabyte computer, includes a manual, keyboard in wonderful shape, and a good clean mouse.

Atari 1040 ST - perfect working condition, nice clean keyboard, some paint drops on the back (guess it was stored in a garage?). includes a good working mouse.

Atari SM124 Monochrome monitor -- works nicely!

Atari SC1224 Color monitor -- great condition!

Steinberg Cubase 3.01 - includes dongle, original disks, and all original manuals!

Steinberg Midex+ - mint condition midex+, offers up four additional midi outputs, two inputs, and smpte in/out. essential for working with cubase!

I think this is all, though i will be getting two more monitors within the next couple of weeks. I live in Ottawa, Ontario, Canada. I want to know how much people would be willing to pay for some of these computers, please post below, or e-mail me at petervh@gmail.com with offers. I will also consider ebay, but i want to try selling here first...if you'd like i can provide my 100% positive ebay feedback page.

Not completley positive I actually want to sell these things...but I really need some new synth gear more than I need these computers. If the offers are good than we can make something happen.

- Peter

????????

The NVRAM is available at BEST ELECTRONICS in USA California for 11$!

So, why trying something else ????

Well Im selling off more of my atari ST collection. The wife says we
must make room for our cars to go into the garage and whats in the way?
You guessed it the Atari collection. I have boxes and boxes and many
shelfs filled with Atari items. I have a load of software(original)
that needs to be cataloged and put up for auction. I have listed a few
items on Ebay a few days ago and have more to come
  Currently 1040STE, Megafile 30, software, and More.

You can check it out at:

http://search.ebay.com/_W0QQsassZatari_onlyQQhtZ-1

Thanks to all, AO

Shed put up a fight. LOL .  I really just have way to much stuff. Who
really has to have 14 ST computers and a ton of parts and software . I
need my TT an thats about it. If she says anything about the TT shes
GONE.

<grin> Well, I understand...

Geez, I'm sure like me, many here are jealous though!

I've got 7 Atari's here, and thats counting my Jaguar, Lynx, and
Flashback2! :-)

Hi,

The software "Eureka" is updated and released on its WEB page.
It is a "2D Graph Describer and 3D Modeller". You will fetch
it at :

<http://eureka.atari.org/eurka604.zip>
That is the Complete Common Edition

<http://eureka.atari.org/eurka020.zip>
Is the Complete 68020 Edition

<http://eureka.atari.org/eurkafpu.zip>
Is the Limited FPU Edition

<http://eureka.atari.org/eurklite.zip>
Is the Lite Edition, working on early ST with 720kb floppy

<http://eureka.atari.org/lib_dgem.zip>
Are Dynamic Libraries Extensions for Eureka

<http://eureka.atari.org/tiny045.zip>
Is the OpenGL Extension (requires previous package)

What you can do with this release is browsing through
2D and 3D objects, without any prior knowledge. That
also makes 10 years that Eureka comes on internet.

I wish you big fun with this new STuff !

```
Best regards,

-- Fran=E7ois LE COAT

I would like to register Thing and I have tried to contact the author
directly using the email addresses from InterActive but to no avail!

Any clues as to how I can contact him?

Thanks.

StyleTrax and Studio Module are two add-on software modules for Cubase on Atari.

These modules were not part of the standard Cubase software, but could be bought separately as extensions.

I sell these two together, not separately.

StyleTrax - you can create your own styles with this module (a bit like the auto-accomp feature on keyboards).
Many styles are included on a separate diskette. And you can make your own ones. A manual is included, which
is supposed to be inserted into your original Cubase manual/binder.

Studio Module - this module lets you record system exclusive into Cubase, edit it and then send it back.
A manual is included, which is supposed to be inserted into your original Cubase manual/binder.

Price: 20 USD + freight from Sweden which is approx 36 USD.

An image of the boxes, disks and manuals:
http://web.comhem.se/~u11149557/CubaseModules.jpg

You just put the modules in a folder and then they become available in Cubase on your Atari.
There's a menu in Cubase where you can active or deactive them. Installation instructions are
included in the manual and on the diskettes.

Pay with PayPal.

Email me on atari@mhc.se

Regards
/Mike

Hello All
First of all let me apologise for splitting the Falcon battery thread. For some reason I could not read any posts for about 2 weeks. I thought I'd fixed it when I wrote the two messages, but only when I unsubscribed and resubscribed in Outlook Express did it reset itself today.

My thanks for all the replys and the help which I will be following up on.

The external cell solution looked good, I found some holders and was ready to try it when my doubts were raised when I read that the chip uses a 5v supply. I came across this seller on line which at the time seemed cheap. (Nevertheless even at 11USD or 3USD by the time they get to England with VAT and duty to pay they might even be more expensive!!)

I'll try and have a go this weekend, time and F1 permitting.

Thanks again to everyone   Mark.

Bonsoir :)

Small release for bugfixes, download on my homepage or directly in the
folder http://rajah.atari.org/files/ -> troll12b_uk.zip (140 KB)

News & fixes:
+ 'Draft' state for messages: kept and not sent until state changed.
+ Possibility to set draft state by default to new messages
- Bugfixes:
  - the posts were not saved in the cache (evenif cache activated).
    (thanks Luc PEYROU)
  - sometimes 'new mail' item disabled.
  - email address confusion when responding to a post or mail.

Apologizes for the inconvenience ;)

Hello,

I just put three items that may be of interest up on ebay. A gorgeous Mega STE, a copy of Cubase 3.01 with dongle and manuals, and a Midex+ midi/smpte expander! Follow the links below to check out the items. I am located in Ottawa, Ontario, Canada -- and I am certainly open to local pickups.

Atari Mega STE:
http://cgi.ebay.ca/ws/eBayISAPI.dll?ViewItem&item=8790028744&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

Cubase 3.01:
http://cgi.ebay.ca/ws/eBayISAPI.dll?ViewItem&item=8790031300

Midex+:
http://cgi.ebay.ca/ws/eBayISAPI.dll?ViewItem&item=8790032903

Thanks,

- Peter

A couple of years ago I had a full room of ST's and parts, all got serviced and upgraded, probably got about 10 ST's now, a lot of the stuff got dumped as nobody wanted it, they do tend to take up a lot of room :-\

1. The supply for the chips is 5V yes, but they have an internal 3V
cell.

2. You dont pay VAT and DUTY on $11 or $3 items coming from the U.S.

Thank you. That clears that up. I'll have a go with the external cell first, although I am getting conflicting info regarding which pins to connect to.

> 2. You dont pay VAT and DUTY on $11 or $3 items coming from the U.S.

True. Although to make it worth while with postage costs I would order a few which would take it over the limit- currently 18GBP. Several small light packages are just the sort of thing to get lost in our postal system!!

The local supplier charges 12GBP + VAT + Special Delivery.

Mark.

Once you've *carefully* prised the top of the NVRAM chip off you'll see
the original cell in any case!

I'd say that this way is a better option than replacing the chip, it
avoids having to strip the motherboard out.

I am still using an Atari Falcon for all my work, mainly DTP. Thanks to NVDI, I can use all Speedo and most TTF fonts without problems.

However, I have come across a range of PD TTFs which, though they work fine on a PC under Windows XP, will not display on the Atari at all. These come from several sources, and tend to be the same ones (presumably from a common original source); the latest I have come from Serif's 'Art Gallery' CD. On that, from 402 fonts, only 31 show their names in a listing with LISTFONT.PRG. The ones that don't include headers containing NULL-separated Copyright notices such as for ADMA.TTF (here the NULLS have been replaced by spaces):

```
C o p y r i g h t     ( c )   1 9 9 0 - 1 9 9 3  B r e n d e l
I n f o r m a t i k   &   S o f t M a k e r   S o f t w a r e   G m b H .
A l l   r i g h t s   r e s e r v e d .
A d a m s k y   S F R e g u l a r
A l t s y s   F o n t o g r a p h e r   3 . 5
A d M a n   R e g u l a r A d a m s k y   S F
A l t s y s   F o n t o g r a p h e r   3 . 5
```

or CALI.TTF:

```
C o p y r i g h t     ( c )   1 9 9 0 - 1 9 9 3   B r e n d e l
I n f o r m a t i k   &   S o f t M a k e r   S o f t w a r e   G m b H .
A l l   r i g h t s   r e s e r v e d .
```

```
A r i s t o c r a t   S F   R e g u l a r
A l t s y s   F o n t o g r a p h e r   3 . 5
C a l l i g r a p h i a   R e g u l a r A r i s t o c r a t   S F
A l t s y s   F o n t o g r a p h e r   3 . 5     3 1 . 0 1 . 1 9 9 4
A r i s t o c r a t S F
```

although ELMLT.TTF seems to work, which includes:

```
Copyright  (c) 1990-1993 Brendel Informatik & SoftMaker Software GmbH.
All rights reserved. C o p y r i g h t     ( c )   1 9 9 0 - 1 9 9 3
B r e n d e l   I n f o r m a t i k   &   S o f t M a k e r
S o f t w a r e   G m b H .   A l l   r i g h t s   r e s e r v e d .
Elementary Light SF E l e m e n t a r y   L i g h t   S FRegular R e g u l a r
Altsys Fontographer 3.5  Volkswagen Regular A l t s y s
F o n t o g r a p h e r   3 . 5     V o l k s w a g e n   R e g u l a r
Elementary Light SF E l e m e n t a r y   L i g h t   S FAltsys
Fontographer 3.5  9/23/93 A l t s y s   F o n t o g r a p h e r   3 . 5     9 / 2
3 / 9 3
```

and ORGA.TTF is OK, which has:

```
(C) 1990 Brendel Informatik CologneMackintosh SFRegularFontMonge
:Mackintosh SFMackintosh SFAltsys Fontographer 3.5  4/30/93MackintoshSF
( C )   1 9 9 0   B r e n d e l   I n f o r m a t i k   C o l o g n e
M a c k i n t o s h   S F R e g u l a r
F o n t M o n g e r : M a c k i n t o s h   S F M a c k i n t o s h
S F A l t s y s   F o n t o g r a p h e r   3 . 4 / 3 0 / 9 3
M a c k i n t o s h S F
```

Any ideas why these don't work on the Atari when they are OK on a PC?
Or could it be because the ones that work do not have NULLs between characters at the start of the description whereas the ones that don't work have them? (I haven't checked them all....)

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

Hi all,

Ok, I have modified some NEW 3 button bus mice for the Atari ST. These work much better than most Atari compatible mice. These roll nice and smoothly. I have stashed a few for myself ;). I have about 5 ready for shipment.

$11.95 plus shipping ($5 for US, $9 for Europe)

Here is my postal address:
Rory McMahon
831 Gee Court
Elburn, IL 60119
USA

You can use paypal for $1 more. (fujiman@netzero.net).

There is one drawback:

Nobody seems to make a low-profile shells for DB-9 connectors. Especially for machines where the mouse connector is under the keyboard. I've used heat shrink tubing to put a hold on the DB-9 connectors. Seem to work pretty well. I can put plastic shields if you use a TT or MegaSTe (or if you have mouse extenders) if you want for $.75 more. This will look a little more professional.

Thanks,
Rory

Isn't the initial PATH set in the mint.cnf? Or what about /etc/profile? Also for users paths there may be another PATH statement your local .profile. I can't look at my mint setup at the moment to check.

> Is there a way to force login?

I think you can do this by not using the INIT statement but instead use GEM='/path/to/the AES', and have TW bring up a shell once the desktop has started. Maybe, I can't really remember.

Just a quick follow up here - being brain-dead on odd-numbered days, it took me awhile to figure out the easiest solution to this problem. I simply put the newer Plextor in my Falcon (that supports the bus arbitration it needs) and put the older Plextor in my Mega ST setup. Duh. Sometimes, the most obvious solution... :-)

Now though, I've got another question. The older Plextor in my Falcon was nearly silent, with maybe a little increased sound during write operations.

The newer model does this speed up and speed down routine - like its ramping up to access speeds or something. Very noisy. Anyone know anything (settings?) that can be adjusted for this?

Thanks everyone.

A midi player that would work under a multitasking os would be very
handy. I recall there was a midi player that used a small liberary of
samples for playback of midi files, but it never worked for me. I don't
remember it's name, or if it worked under MagiC/Geneva/Mint? I use CAF
on a CT60 for sequencing, recording and scoreing.

On my Falcon PHPlayer works under MiNT. It can play samples, but also
MIDIfiles, using samples. It doesn't do that job very reliable on my
system. Seems to be quite buggy, or my Falcon is not fast enough for that
job. I would say, search for phplayer.zip via Google, and give it a try.

Yeahh I have talked to Nima from time to time. I just bought a real Umax Astra
scanner from hime. It works great and is quiet. I also bought my Nova Graphics
card from him along with the CD Master series.

I use one right now called Sweet 16. It is the only MIDI Player/Sequencer that works well on my Hades060.

NVDI 5 has drivers for the HP Laserjet 5L, 5P/5MP and the 5Si/5SiMx plus some other HP LaserJets. Once of these may work just fine. I was able to use NVDI 5 to get my wife's HP Laserjet 2100 to work with my Hades.

Hello,

This time, I think the m68k audio mixing routine is fixed.
Along other changes, configuration file and saved games are saved in
$HOME/<game name> subdir if $HOME is defined.
You can also select joystick number in configuration file.

  **********************************************************
```

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

game
ftp://chapelie.rma.ac.be/atari/game/pmdoom-0.49.zip
(331.753 bytes) Atari version of Doom.
You need the PC version of Doom (shareware or registered) or Doom 2.

ftp://chapelie.rma.ac.be/atari/game/pmheretic-0.49.zip
(328.270 bytes) Atari version of Heretic.
You need the PC version of Heretic (shareware or registered).

ftp://chapelie.rma.ac.be/atari/game/pmhexen-0.49.zip
(382.483 bytes) Atari version of Hexen.
You need the PC version of Hexen (shareware or registered).

utilities
ftp://chapelie.rma.ac.be/atari/utilities/desktops/tera381b.zip
(298.959 bytes) Tera Desktop (TeraDesk) is a replacement for the ST, STE or TT desktop.
It provides more facilities than the built-in TOS desktops.

Have fun,
Martin

Bonjour

News release of Troll Newsreader (and now basic email client included).
Download on my homepage or directly in the folder:
http://rajah.atari.org/files/ -> troll12_uk.zip (140KB)

New snapshot @ http://membres.lycos.fr/nef/images/snapshots/troll_snap.png

New features:
+ Basic email client implemented (carefull, not full. there are not yet
  multiparts management, attached files nor more than one recipient).
  * one or more POP3 accounts (retreive and/or delete mails on remote
    server), with local receiving mailbox.
  * misc options (scan every 5 minutes / automatic scan)
  * archive folder for sent mails
  * one or more archive folder for received mails
+ List of emails address, you can collect them.
+ Incomplete UTF-8 decoding (occidental charset) when reading.
+ Reformat text if width > 80 characters.
+ Some changes in the interface, some pop-ups (with button "~") change with
  the context.
+ Format=flowed management.
- Changes in the ST-Guide documentation (tutorial).
- Some bugfixes.

I repeat: BASIC email client. Cc: multipart & attached files may come
later but I'd rather like to implement a RSS newsfeeder part in the
program.

Also carefull: some spams fool the POP3 server and indicate a bad mail size.
I have set a large buffer, but it may be not sufficient some time.
Better delete theses spams directly on the remote mailbox.

Voil� :)

Anyone else notice that when you try to download this newest version
now, you get an error from Skynet (the file's host)? Or is it just me?

I like it too. I did notice one problem though: when I open the "preferences" dialog and then the "misc." tab, after that all the resource texts are badly positioned. Looks really ugly. I'm testing it with recent versions of Aranym+EmuTOS+Fvdi+FreeMiNT+XaAES+Teradesk right now.

Another more positive remark: Unlike the shutdown routine that is used by the XaAES taskmanager, zTask's shutdown cleanly unmounts and shuts down my (Spare)MiNT system also on my Aranym box. Maybe Zorro can give the XaAES developer(s) a helping hand ?

Hi,

We advise you to visit :

<http://www.haveland.com/index.htm?povbench/index.php>

to check Skyvase button and to search ATARI.

We've performed the Skyvase benchmark using ARAnyM 0.9.3
and POV3.1g 030+881.

We're about 8 time faster than a Falcon CT60. That put
ARAnyM at the level of :

Pentium-II@350MHz or a
K6-II@500MHz or a
Celeron@400MHz or a
AlphaEV56-21164A@533MHz

With a host machine Athlon2000+@1.67GHz

That's real funny :)

Best regards,

Very impressive.

So how fast does it run the "Beams" demo? :-)

Actually, it looks OK on my system
(CT60+TOS4+NVDI+FreeMiNT+Xaaes+Thing). Could be Fvdi-related, perhaps?

So it seems. I just tried with Aranym/FreeMiNT/XaAES/Teradesk but now with
TOS4.04 without fVDI and the problem disappeared.

Ho well ... That's true. But you are speaking about a native (rewritten)
OS compared to ARAnyM that is an ATARI Virtual Machine, aren't you ? It
runs on every machine.

Amiga computations on the Skyvase scene are impressive indeed !

Best regards,

Funny is this:

Aranym = 1m46sec = 106sec
CT60 = 8m23sec = 503sec

503/106 is NOT 8! But i guess thats Aranym math, so no wonder it does
skyvase calculation that fast ;))

Looks fine here with, seemingly, the same setup, except for Thing. Are
you running fVDI beta6? It fixes a lot of display glitches with WinDom
apps like zTask.

> Another more positive remark: Unlike the shutdown routine that is used by

If by XaAES' shutdown you mean CTrl+Alt+Del, it works fine here. I've
never shut down from the task manager.

Cheers,
JF

Do you have a Easymint/SpareMiNT-based setup ? If I use Ctrl+Alt+Del or
the Taskmanager, I can shutdown, but my sparemmint ext2 partition is not
correctly unmounted. The next time I boot the system is forced to do a
time consuming filesystem check. I can only shutdown cleanly with
U:/sbin/shutdown and now als with zTask.

My progress:
- setting the "path" environment variable in mint.cnf solved my problem. (naes.cnf would have been ok if I hadn't mistyped)
- isn't etc/profile processed only on login? Can somebody confirm that?
- What is recommended: using INIT=/sbin/init or GEM=...?
- Forcing login would be still fine ...

Setting of Mint from the ground isn't so hard as I expected. I know I still far from the end. I have to setup the network when my EtherNAT finally arrives. I wish I had experience with linux...

- Is it normal when I boot to MiNT in protected mode (I think this is
its name) then Thing fails to start? (maybe it is discussed earlier,
sorry if that is the case)
- What is the maximum length of filename in Thing? Can that somehow be
changed? (I had problems with the long name of the packages ;) )

Test report:
  - CT60@98
  - NVDI
  - NAES
  - BLOWUP (software only)
  - Thing
```

- Mint 1-16-3 Alpha

Both Doom and Heretic run without problem. Sound is perfect. No crashes. I couldn't try Hexen because I haven't got the WAD files. If the speed could be somehow improved ....

Great work Patrice !!!

See who wins at GCC too ;)

I love aranym, but benchmarks are silly. We all know it's fast like a
Transmeta Crusoe is fast.   Fast at repetitive code.

Thanks,
Mark

Hi All
I too have a Falcon with the same trouble.

I've found a source for the chip in question :- MK48T87B-24.
The supplier is close to where I live (Southern England)

I've ordered a couple (Approx 20GBP each) They should arrive 10 to 14 days.

I'll be testing them when they arrive. IF the battery is still OK I'll let you know.

Does anyone have a data sheet for this chip? If so what are the pin numbers for the battery output?

BTW What is happening to this list. No new posts for a month, and when I click on a message it tells me it cannot find the server. Is it me?

Mark.

It should start. I'm using the latest kernel/xaaes alpha + Thing with
memory protection enabled without problems.

20 QUID EACH!!! Are you mad, or rich? These chips are generally 2-3
USD. Where did you order them from, Atari Workshop???

>              I'll be testing them when they arrive. IF the battery is still
> OK I'll let you know.

So they are not brand new? These chips are rated at approx 5 years life
(although some are still working at 15 years) so if they are not brand
new then you have been had.

>              Does anyone have a data sheet for this chip? If so what are the
> pin numbers for the battery output?

They are pin compatible with the Dallas DS1287 and DS12287.

>            BTW  What is happening to this list. No new posts for a month,
> and when I click on a message it tells me it cannot find the server. Is it

I've also posted a couple of times about how it's possible to use an
external cell to power the NVRAM chip :-(

Joe, the comment about speed? Was it for Hexen or Doom/Heretic? I'm
wondering 'cause Doom is running great here, as far as speed goes...

As far as I know, 32 characters. Thing 1.28beta is supposed to go
beyond this limit, but it was never made publicly available.

Cheers,
JF

Hi All,
I am looking for games for this comp. but I am not looking for roms or anything like this.
I am interested only in games which I wll be able to play on Atari. (copy from PC to flopy disk -> atari)
Could You please give me website address?
Thank You in advance!

Hi Martin,

[Off topic]

Sorry for the delay, I have a lot of problem with my internet connection since some days.

[/Off topic]

It seems that it's a fVDI bug.

Please, send a bug's report to Odd Stancke.

Believe me, he doesn't need that I gives him a hand; this guy is more skilled that me :-P

Ciao,
Zorro

For sale:

Pocket S/PDIF interface (PSI BlowUp) for the Atari (or compatible) Falcon.
Optical S/PDIF in and out.
Coax S/PDIF in and out.

An infra-red device is included for infra-red communication using the Falcon.

I've used it with a C-lab Falcon mkII and it works fine.

Data-DAT software is included, to take backup copies on DAT.

Price: $50 plus freight from Sweden.

Here's an image of the package:
http://web.comhem.se/~u11149557/BlowUpSPDIF-interface.jpg

Pay with PayPal. I send the hardware when you have paid.

Email: mikael@mhc.se and please write "S/PDIF interface for the Atari" in
the subject line to avoid accidental delete of the email.

Regards
Mike

ID would have been installed in the basic package I guess, so I don't understand why you don't have it.

After some poking around on sparemint.atariforge.net I have found the package you want here:

http://sparemint.atariforge.net/sparemint/html/packages/sh-utils.html

Good luck.

Thanks Coda, I found it myself by now. But my question is still: how can I know which package contains a specified file?
I'm trying to install mint totally manually, so there is no "basic" package "just" packages (rpm). This is a hard work since I have no experience only with Windoze.

Nima,

I've been hoping to find the demo of the most recent Photoline TT somewhere, but can't. I'd like to try it out on my CT60 Falcon. I used to have the demo on my standard Falcon, and thought it was a really nice product a long time ago, but it was a bit slow for that system, so I deleted it. On your web site you have a link to it, but I get a "File Not Found" error. Any chance of fixing this? Thanks!

Sparemint uses RPMs now, right? If it does, can't you use the RPM facilities to query?

For example, on an RPM based linux box, you (as su/root) could do a:

```
[root@darkforce darklord]# rpm -q --whatprovides cedega
cedega-5.0-1
```

This is assuming that what you're looking for is installed by RPM and can be found in the RPM database.

Just a thought.

Hi Edward. What is it that makes you think its the Plextor doing this? I
mean, could it just be your hard drive going bad?

I also wonder why just after a warm re-boot. It doesn't do this when its
cold?

I believe that The Atari Workshop and 16/32 Systems both still sell NVDI.

You could check and see.

Not sure if this has been discussed here-tryin to figure out the fastest way
to get a midi file from my Mega STe to a PC w/o using a floppy. Sequencing
on the Atari, recording audio on the PC. Any ideas on this config.
appreciated.
tnx,
fcr

Le Tue, 21 Mar 2006 02:24:17 -0800, Joe Iron a �crit�:

> Did you find something?

Yes. When putting the m68k asm routine in Heretic, I found that the volume was too low in Doom (samples are played with a volume from 0 to 15, instead of 0 to 127). This is fixed.

But there is still a big problem: memory allocated for samples is still freed when the sample is playing, hence some possible crashes. This is not related to the m68k audio mixing routine. And this is what causes a Z_CheckHeap error.

And for people willing to help with testing it, just saying 'it crashes' is a useless bug report. At last, hardware/cpu/os used is a minimum.

Hallo Francois LE,

>It is built with Xcode 1.5 and optimized for G4 and above.

I use a PowerBook with G3 - can I use this version, too? I think about a
MacBook, an Intel based Mac. Is there a ARAnyM-Version as Universal Binary,
which uses the JIT on the Intel processors as it is used on Windows and
Linux (x386)?

That's the tricky part. Try finding a USB floppy drive that reads
anything but HD (1.44 MB) floppies.

> You just have to add "Floppy = /dev/fd0" in the "config" file.

Rather, convert them to disk images on a 68k Mac :-)

Hi,

You can find the last version of zTask on my webpage.

Here the changelog:

News:

- Preference panel added.
- With Xaaes, "XaSys" is not more listed as a GEM process.

Bugs fixes:

- The first drawn of the process list in the Task Manager
  was corrupted.
- Some littles bugs fixed.

Ciao,
Zorro

First of all, Happy New Year everyone! :-)

We're trying to kick things off right at The DarkForce! BBS, so in the spirit of the season, we are continuing our tradition of monthly prize giveaways.

This month, January 2006, one lucky Atari caller will win a free subscription to ST Magazine. Also, since its almost NFL playoff time, this months featured game is AFL Football! The lucky winner of this game will receive a $25 cash prize. Slots are limited to the number of teams available so don't be left out. Also, rumor has it the Sysop is playing...who doesn't want to take a crack at bashing the Sysop? :-)

Good luck everyone! :-)

Did something get queued up somewhere for way too long? ;)

Thanks,
Mark

You betcha - although I can't explain why, whenever newsgroups goes down
from my ISP, when they do finally come back up, the first 1-2 times I
access the newsgroups I'm subscribed too, well, old, old messages get
reposted.

This is using PAN under Linux.

Anyone have any ideas as to why? I've had it happen several times. :-(

Okay, if I'm following you correctly, then what you are looking for is
dependencies?

Hmm, when you go to compile the software, (I'm assuming ./configure, make,
make install?) it should tell you whats missing. As for RPM, it will too.
Too bad we don't have something like YUM or URPMI or APT-GET. That way,
those pesky dependencies are usually taken care of for ya.

Even under modern Linux distros, sometimes its a job to install software.
:-(

Not really dependencies. In my case the following happened:
- I installed BASH from BASH....rpm (binary). It worked well.
- Then I installed a couple of rpms (binary), all sucessfuly.
But one of them installed/replaced a script that tried to use the
command "ID". Since then, when I start BASH it complains abut the
command "ID". Maybe the references list of one of the package was
incomplete. (there is no provides specified manually for rpm)

How about using RPM to remove those couple of packages, then reinstall the
bash RPM?

Not the best solution, I'll agree - but it should work.

Sparemint's dependency tree is really trashed. We're quite lazy due to the static linking situation so as much as we try, we do inherently miss stuff.

The new sparemint site, http://dev.sparemint.org will have a file search function as part of a larger query system I'm implementing soon but it's not done yet. The easiest way to get done what you want to get done is simply to get in touch with an easymint using friend and have them do rpm -qf /bin/id

Here's an example of the output on my Fedora Core 5 system:

```
[mduckworth@evil ~]$ rpm -qf /usr/bin/interdiff
patchutils-0.2.31-2.2.1
```

But there's no way for your freemint system or RPM to give you information about packages that it doesn't even have ;)

Thanks,
Mark

Possibly, after your ISP sorts out the usenet problems, they fiddle with the message ID counter for each group, as a safety measure. Pan cannot know this, so continues with message ID's it has, resulting in the retrieval of old messages.

Sounds as reasonable an explanation as any I've heard yet. :-)

It is not the drive as I just bought it two months ago. I did solve the
problem. I installed a new IDE cable and that did it. I did not think it would
work since I used the cable that came with the WD hard drive. It is a 40-pin
80 connector cable where as the one that came with the Hades was a 40-pin 40
connector cable. It worked though and that all that counts. Now I can go and
try to get my Mint partition up and running.

There is a tool that I downloaded for PC but it would not open any of
the sparemint RPM's. I can't remember the name of it now, but I thought
I'd tell you in case you have the same problem.

Thank you for your help so far. Things are getting better. But there are still questions:

- I downloaded the latest kernel from atari-sorce.org, but it searches

its files in "c:\mint\" instead of "c:\mint\1-16-1". Why is this? Or that has different version number? How can I check that?
- I want to domesticate "/sbin/init". Previously I started NAES with "GEM=..." in mint.cnf. I want to change it to "INIT=U/sbin/init". Curently it reaches the login prompt and I can log in. But how can I tell it to start NAES?

This March I'm celebrating my Birthday! If you want to bless me, I'm trying to raise Capital to buyout an Atari Dealer of all his Atari goods! So give me your Atari business, send all Atarians Marching my way and help save Atari goods from extinction, buying from Ben Saves Atari!

I'm creating a NEW Atari catalog. Catalog's name is NEWINBOX.TXT compiled from all items NEW in BOX from all my other catalogs made up of Hardware, Games/Software and Books for the 8 Bit, ST & Jaguar! Instead of 38 columns of text width it will be 80 column width, Most entries will be 1 line each and sorted alphabetically by title. You'll only find my NEW items in this catalog as I'm removing such NEW item's from their other catalogs.

http://BensCatalogs.Atari.org   Atari's for sale!
http://www.aracnet.com/~atari/adoption.htm   Atari Adoption Agency!
http://www.aracnet.com/~atari/birthday.htm   Ben's Atari Birthday!

http://www.aracnet.com/~atari/wantlist.htm   What Ben Wants!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

ATTENTION Atari customers. I'm buying out an Atari dealer, cleaning him out! I've bought over 480 pieces of ST Software. Mostly Games! I need to make room for NEW inventory and raise the capital to buy him out. If you would like to help save Good Ataris from extinction, buy ANY Books or Games/Software in my Classic Atari 8 Bit and/or Atari ST Catalogs and get 20% off! E-Mail Atari@aracnet.com or Call Ben at (503)256-9974!

Always welcome news to see commercial suppliers still supporting the Atari market. I noticed your web page has several old dates, mostly from 2001. You may want to update those so other people who come across it realize you are still active.

> tell it to start NAES?

Open /etc/ttytab and comment out the line:

```
#console "/usr/sbin/getty console"  vt52  on secure
```

and add the line:

```
console  "/path/to/xaloader.prg"  tw52  on secure
```

Cheers,
JF

What I really need is a CSS guru. I'm coming to terms with the fact that my sense of design really sucks. I'd like the new site to look really sweet. The site is done in MySQL btw, and I can handle all those queries as I do that stuff for work. If for some reason you wanted to help out with php/mysql, let me know. The project certainly needs volunteers.

Thanks,
Mark

Thanks, that worked. There is one more problem to solve: previously
when I had to log in, I could execute any commands no matter what was
the current directory. Now if the current directory for example /bin I
couln't execute "id" which is in the directory /usr/sbin. I tried to
set the "path" environment variable in the config file of NAES. No
success. What to do?
Is there a way to force login?

If so, there must be different revisions of the serial components on
MegaSTe's. I saw information on the net a long time ago that reliable
connections are impossible beyond 56k, and my own testing at that time
beared that out. My research told me that the SCC chips in the TT and
STe were a different revision (IIRC I think it was buffer size).

True, I have done this myself, but I got a vertically squashed picture.
If its a good monitor it will resize this itself properly, mine didn't
I had to go in the back with a screwdriver (not recommended!).

> Now color, thats another story. The monitor in question has to be able to

These are great if you can find em. Still small though.

> Another route you can take is to try and spec out one of the modern LCD
> TVs, that support multiple input sources, and sync down to that magic 15k

This may be the best option, because you can try the ANT socket for
easy hookup but not the best quality, or if there is RBG or Composite
inputs you can make a cable for what should be a great picture. The
price of these TV's are coming down rapidly though, but I would check
the specs before buying any LCD TV, there are a lot of rubbish ones
around!

BTW, have you considered buying an LCD or DLP projector? You could have
a 20ft screen! ;-)

Coda.

No, Modem 1 on the Mega STE is the same as on the ST/STE, max. 19200.
It is there mostly for compatibility reasons.
The fast speeds can be achieved on Serial 2 and Modem 2 (and Lan, which
is more or less the same as Serial 2 internally: both cannot be used at
the same time).

They might but, as far as I know, all Mega STEs can achieve 230400 on Serial 2/Modem 2.

>I saw information on the net a long time ago that reliable
>connections are impossible beyond 56k, and my own testing at that time

I think you refer to something else, which is a hardware bug on serial ports of the Mega STE. (Since it is a hardware bug, it cannot be corrected by HS Modem.)

Where this bug is present, data going through Serial 2 or Modem 2 may be corrupted as soon as the speed is higher than 19200.

This hardware bug is rather clearly documented in the SCC_X.TXT in the HSMODEM documentation:
MegaSTE with MODEM2/SERIAL2 Errors

With some MegaSTE's, during data transmission over MODEM2 or SERIAL2 and simultaneous DMA access of the hard drive or floppy disks, files are destroyed. This usually shows up when, after using - say - ZMODEM for receiving (or sending) archives (e.g. LZH, ZOO, ZIP) they can't be unpacked (error message from the packer). This error is caused by a faulty PAL in the control logic of the SCC. Franz Sirl has developed a GAL that replaces the PAL and in our experience removes the error. The listing for the GAL can be found in mailboxes as archive FSER096B.LZH.

I have indeed the corrected GAL.
With it, I can use reliably 115200.

Some only have composite inputs, and if you want good colour you will need
RGB. Remember all SCART inputs are born equal. However you should be able to
get a panel that does both Atari MONO and "Normal" but it would be good to

try first. Perhaps get one from some where that allows return with no question before 28 days are up...

Jackpot! Same behaviour as mine on the Falcon! Even without Xcontrol,
the date and in my case the clock get corrupted that way!

I wouldn't mind about a dead RTC, had to set clock and date by hand on
my ST as well but I'd like to have a stable clock/date while power is on.

Matthias

So I guess it is common behavior for a Falcon with a dead battery? I think
thats odd though. I mean any ST class machine will still hold the
date/time even though a battery is dead or it doesn't have one. Could it
be because of the NVRAM?

Im using TVGA TV tuner (Aver media JoyTV) and its not that bad actualy. I do use composite though. Thing with composite is to use good cable, but only rare devices has quality internal wiring... Not as good as RGB but also not bad, and u can connect many older machines etc there as well...

Janez

It's probably just that particular design of RTC. With a dead battery
across its power terminals it cant function properly. Other designs
seem to be OK in this scenario.

Just a hypothetical question... If someone bought the plans to the
phenix and started manufacturing and selling them on a large scale,
would they have the legal right to all the profits and also brand them
as their own product?

Forget this idea...!
The PCB of the Phenix 060 contains several bugs that were corrected with
wires and solders...;-)
And secondly the technology on Phenix 060 is old....
No sense to produce that !

And the better here...There is no completer schematics existing about the
Phenix mb !
Juste some parts for each chips that a guy already bought on a previous
auction..
The rest was into my head... and is erased now... because it was no sense to
keep such data in my head (need place ;-)).

Again these auctions are for collectors atari, not to produce...
The only thing you can produce is the same Phenix MB prototype with same
problems and same bugs...

Hi,

The first beta of zTask is now available on my homepage.

zTask is (yet) a taskbar program that allows you to control your running applications.

Before to report the problems, look if your computer meets the system's requirement.

Ciao,
Zorro

http://zorro.arcadia-crew.com/

We have all many , many hypothetical questions !!
It will not do us advance...
It serve nothing in fact...

Hey, what about the consequence for religions if tomorrow a space craft
would land on earth with some living and super inteligent organisms on board
???

Other Hypothetical question... ;-)

That's interesting. How is your program different from Taskbar, xTask,
Appline, etc., other than the ability to list CPU usage? Are there
other things you're intending for this program that aren't in it yet?
Could you have the program check for which OS it is run on and disable
the functions that don't work when run on Magic? Just curious. I just
can't seem get a system I'm happy with or that runs well when using
Mint, so I use Magic as my main system and only use Mint when I
absolutely have to. I like the appearance of this taskbar better than
the others, but it doesn't run on the OS I like to use. A workaround of
some kind might be nice, if you're willing. And I understand if you're
not.

Why?  Do you have over 254 computers?

> I use latest software (STING 1.26 with TCP 1.40 and SCSI/Link 0.71)
> At startup STING properly communicates that SCSI/Ethernet is connected.
>

I wrote about this a while ago.  (Search under my "name" on
groups.google.com.)  In short:

10.0.0.0 tab tab 255.255.255.0 tab tab EtherNet tab tab 10.0.0.2

should be all you need unless your TT needs to send packets for other
computers out another port.

My Falcon interprets 15/31/07 as 2107! Try changing XControl right after bootup. Then exit XControl and reenter it immediately.

When my Falcon's battery started to die, it simply needed setting. Now I get the same thing you do.

I don't think that just having a copy of the design and PCB artwork would give you the legal rights of ownership to the item, I assume the rights would still belong to the original developer and so you would need some form of communication from them stating that they are giving you full ownership of the project and all associated rights or some other form of permission to manufacture and sell the item if you were to legally manufacture/develope the item and retain any profits made from it let alone re-brand it without the risk of being sued, but thats just my opinion.

Hi,

mail@freeman-studio.com a �crit :

> That's interesting. How is your program different from Taskbar, xTask,
> Appline, etc., other than the ability to list CPU usage?

zTaks uses some AES4's functions to avoid to list softwares such
Bubble.app in the application's list; and MagiC doesn't provide these
functions.

> Are there
> other things you're intending for this program that aren't in it yet?

Yes, for example, I will add a ntp system to synchronize the system
clock with Internet... and that will works only with mintnet.

> Could you have the program check for which OS it is run on and disable
> the functions that don't work when run on Magic? Just curious.

Off course, I can but it means to recode many things and I haven't the
time(and the will) to do that, sorry :/

Cheers,
Zorro

Great job Zorro! I've just tried it. One comment: if I set the "use
image palette" option in thing, then first ZTASK looks ugly and then
the whole desktop. The functioanlity and the way it works is great!
Thank you very much!

Hi,

> Great job Zorro!

Thx :)

> I've just tried it. One comment: if I set the "use
> image palette" option in thing, then first ZTASK looks ugly

If your system palette is not 'standard', you can change the colors used by ztask. To do that, you will need to edit the "ztask.inf" file located in your HOME directory.

In the next beta, I will add a preference panel to do that.

> and then the whole desktop.

For sure, this problem has nothing to do with ztask.

Ciao,
Zorro

a decent television that has an rgb scart input will work wonders for colour modes, even if it doesn't, if that computer has composite video out thru one of the pins on the monitor socket you could use that to connect to a TV. Obviously, these methods are much much clearer than using the RF out, before dismissing me so quickly :P

obviously your not interested in mono mode since your using the SC1224.

```

|
| I do have an adaptor for my STe that I have used to hook up to an
| ancient Everex monitor from 1989, and also an old NEC Multisynch from
| the same time period. The adaptor I have is the very commonly talked
| about one that a lot of ST users know about from way back when, nothing
| quirky or anything. (I have one adaptor that will make the monitor
| display color, and one for displaying MONO mode on a color monitor, I
| built them from plans I downloaded on a BBS about 15 years ago) It has
| the round din for the back of the ST and then the trapezoidal...how
| ever many pins it was, standard monitor plug of the day.
|
|
| But what about newer, larger monitors from the 90's and up, any hope
| for an ST to hook up to one? Will the old adaptors I have for the NEC
| work, or is there maybe a newer monitor adaptor that would go from an
| ST to a newer color monitor? Just wondering, hope it isn't a dumb
| question, but it seems like any time I tried any monitor besides my old
| Everex or NEC it was no luck. Probably wrong HZ rate or something.
| -STcomp

I don't know, look at Sinclap OS v.99 BETA. Its been around for years and
has never been upgraded, updated, debugged or had viruses removed. Behaves
exactly the same way today as it did 10...15...20...years ago. :-)

Hello,

This new version has 2 updates:

- The ability to select which joystick to use (from the configuration file).

The joystick used is printed on the screen.
- A m68k asm audio mixing routine, which should be faster, especially on slow systems.

The new version if available on my website.

What function do you mean? MagiC have the function appl_search. What it not have is that appl_search can return long application name.

Zorro,

You too are a Godsend to the Atari community!! All of you who are still developing for our beloved machines are!! May you all continue your marvelous work and never lose heart in it!!

Hopefully in the next couple of weeks I can get my Falcon/CT60 up and running again, then I'll be able to try out your software!! :)

Hi Patrice,

Seems like 0.47 is quite unstable on my setup (CT60, FreeMiNT/XaAES). I haven't been able to go further than the setup menu, where it crashes.
The results with "-audio off" is the same.

Regards,

/Joakim

Falcon latest news ....
== Atari Falcon 030 4mb ram and now with 128mb CF hard drive! ==
Well, I've fitted a CF-IDE adapter with 128mb card to my new Falcon and then had to scratch my head to remember what to do next ?
I found some old disks with first Gasteiner hard disk manager, but that only works with scsi disks, then I tried ICD Pro 6.5.5 and it set up everything perfectly.
I've only tried running an Infocom game on it so far to make sure everything was Ok, so my next question is .....
What software should I try. There's so much you hear of, Magic, Mint, Thing, Teradesk, etc. etc. and its been years since I last used an ST, what is the must have software to run on a Falcon ?
I'd like to connect it to my PC network as well, easy or not ?
Cheers
Jammer

I have decided to reduce my inventory of classic computers, so reluctantly the ST stuff must go. I have a medium-sized collection of ST stuff including a Mega 4 STE, 1040ST, a couple of hard drives, floppies, Diskcovery cart,software, disks, mags., etc. I estimate it will fill a trunk of a full-sized car, and maybe some to the back seat, but a pickup truck should not be necessary.

If you are interested, here are the "rules:"

1) PICKUP ONLY -- central Indiana -- southwest of Indianapolis.
2) AS-IS. It's been stored in my (heated) garage and family room for about 10 years.
3) ALL or NONE. You take it all -- no pick and choose.
4) The actual pickup date will be at mutual convenience in later April or May -- after the weather has settled a bit, and I have a chance to separate the boxes of items.

If interested, "reply to author".

Thanks,
Larry

I hooked my STe up to my 17 inch Compaq VGA monitor. Worked fine, but just a little fuzzy. I did buy the mono adapter which allow direct hookup to a VGA monitor. It was crystal clear. Oh, I used a video converter and the Video Key to hook up my STe to the 17 monitor to get color.

This March I'm celebrating my Birthday! If you want to bless me, I'm trying to raise Capital to buyout an Atari Dealer of all his Atari goods! So give me your Atari business, send all Atarians Marching my way and help save Atari goods from extinction, buying from Ben Saves Atari!

I'm creating a NEW Atari catalog. Catalog's name is NEWINBOX.TXT compiled from all items NEW in BOX from all my other catalogs made up of Hardware, Games/Software and Books for the 8 Bit, ST & Jaguar! Instead of 38 columns of text width it will be 80 column width, Most entries will be 1 line each and sorted alphabetically by title. You'll only find my NEW items in this catalog as I'm removing such NEW item's from their other catalogs.

http://BensCatalogs.Atari.org	Atari's for sale!
http://www.aracnet.com/~atari/adoption.htm	Atari Adoption Agency!
http://www.aracnet.com/~atari/birthday.htm	Ben's Atari Birthday!
http://www.aracnet.com/~atari/wantlist.htm	What Ben Wants!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. Back in the day before Apple was cool outside the geek world, they hired a British guy, Jonathan Ive, who has been pretty much solely responsible for the design innovations seen in apple products, from the coloured imacs and sleek design of other apple products, to the ipod and its popularity; he's made apple products desirable, mainly due to looks alone.

If Atari was equipped with the services of this guy; and say, the Falcon had been released in the style of an iMAC, does anybody think this could've turned the company around?

Of course - but at the time the Tramiels were too busy worrying about the frigging game market - musch as Apple is with the iPod market these days

Sad really, I still have fond memories of my MegaSTE

TBH, I don't think so at all. Atari's problem never was the design, it
were the logistics.
They always promised heaven and more and by the time the products
finally were available (IF they ever saw the light) the market had
been taken by competitors.

So, IF the Falcon would have been released way earlier (let's say
about the time Jack & Sam initially announced the product), Atari
might have gone another way.

But it went the other way.... yes.

I still own an STf, a Mega ST and a fully equipped TT, but these days
they only gather dust.

Louis

Version 3.81 of TeraDesk open-source desktop is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

This is a non-critical bug-fix update. Some obscure bugs that probably
few ever noticed were fixed. The opprotunity was used to make several
small improvements as well.

See the history file for more information.

Have fun.

Hi Patrice,

Sorry to say, but the new release is very unstable still. Version 0.46 works really well (it has not yet crashed at all!), where as 0.47 and 0.48 will crash shortly after displaying the game menu. It does not matter if I have sound enabled or not, it crashes anyway.

Regards,

/Joakim

Atari did have a guy like Jonathan Ive. His name was Ira Valedesky (I'm sure the last name is not spelled correctly). Who do you think designed the beautiful ST/STe/TT cases? :-)

I'm almost positive Ira would have created a cool case design that would make iMac look clunky if the Falcon line survived until 1999 when the iMac was released. Remember, Macs were still boring beige boxes back in 1993, so even the 1040ST design still looked fresh to a PC/Mac user.

But Atari being cheap as they are, they didn't want to pay the manufacturing costs of a new case design since they had lots of 1040ST cases around already. "Let's just remold the back and save lots of $$$" So the Falcon was released in the same old 1040ST case. While the case was nice in 1986, I think many Atari users thought the design was old by 1993, and it really needed like a 1990s case.

However, there was a new case in design. Have you seen the MicroFalcon040 design?   =>NICE<= Beautiful design in my opinion. Hell, I'm sure Sony agrees too as they copied the design for the Playstation 2!

So, no Atari didn't need Jonathan Ive...they already had him!   [Except his name was Ira V. (don't want to murder his last name again <grin>)] They just never got to use him enough, that's all.

I hate to say this, but Steve Jobs has final say in product design.
Has even rejected a few of Ive's designs including the one to replace
the original iMac which later became the  iMac G4..  I think the eMac
was the orginal iMac replacement but was relegated originally to
education market and the iMac G4 that Job's invensioned became a
reality.

Also the total integration between iPod and iTunes is what has made it
the market leader.  As aapl opens more retail stores worldwide, the
iPod will further the strangulation of pushing more competitors out of
the market.  Plus the iPod is being used to draw users to the Mac
platform as a peripheral.

If atari was to remain in business, the Tramiels had to go.

I use midi on my Falcon and 1040STe. Cubase Audio Falcon and Notator SL primarily, but also some other sequencers/utilities. One thing I wish I could find is a simple midi file player that is Multi-tasking friendly. It would be nice to just click on a MIDI file and have it start playing on my synth without loading up a sequencer, then loading the file.

did you know of the install application from with the gem desktop ---menu
bar?

i'll work on it.,but there is one program i remember ,

from a guy who resided in british columbia ,canada.
its called smf..simple midi player ..if i remember his name was rob ..uhm
something???

back to the install application just single click on the program, which uses
the midi file...example cubase or notator...then go up to the menu bar and
choose install application ...type in file extension then click enter/ok
...now everytime you double click on ...example a .mid file ...the related
program starts and initiates the target file. cool , did you know of this?

charles

Without entering the Atari vs. Apple 'what-if' debate, I would just like to note that zip (of the InfoZip zip + unzip package that is available for most platforms) in most cases can fix a corrupted zip archive so that the good files in it can be extracted. Zip is to be used with "-F" or "-FF" option (uppercase "F"!). It is interesting that this capability exists in zip but not in unzip.

Cu.

I'm using MIDI for my job every day :-)

I'm using a Mega STE4 with Cubase Score 2.0r6 or Logic 2.5 for

sequencing music with 6 expanders, and using synthetizers editor too
(Synthworks M1, Synthworks TG77, Nord Lead Editor, SPD-11 Editor,
EPS16+ Patcher, Avalon ...)

Many musicians tell me how to convert Cubase Arrangement File or
Cubase Song File on Standard MIDI File (because they don't have any
Atari again, and they use Atari emulator (Steem) on PC Windows XP, and
they have any problems for read their Atari Floppy Disk on PC ...) :-)

Maybe there is here a suggestion ;-)))

Yes, I'm aware of this process, but I'm really looking for something
I can use with Mint on my Falcon and MagiC on my STe. Just a simple
player that will work on multi tasking OS and no dongle to worry
about. I'd love it if midi could be added to Aniplayer!

Thanks,
Joe

I have a simple one on my Falcon that works on my MiNT setup. I'll look
it up for you. But we could use something better. MIDI playback support in
Aniplayer would be cool indeed.

I tested 0.48, except some graphical jerks from time to time (I've got
a feeling it depends on the samples playing - more samples, more chance
to see it) but I observed onyl one crash. Tested under TOS.

Hi,

ARAnyM (Atari Running on Any Machine) <http://aranym.atari.org/>
is an Atari Virtual Machine also running under MacOSX.

The 0.9.3 ARAnyM version for OSX.3.9 (or above) is available at :

<http://eureka.atari.org/MacAranym.zip>

It is built with Xcode 1.5 and optimized for G4 and above. It
includes a preview boot disk image similar to AFROS (Atari Free
OS) and SDL. Ready to use ...

Feedback is welcome.

Have fun :)

Has anyone heard onf an atari SAM (software automated mouth) program,
preferrably for the 1200xl? i had an old 1200xl with a floppy that had
it in assembly, but i gave it to my sister. i had a lot of fun with
that old thing...have you seen a program like that before?

You want to ask that question at comp.sys.atari.8bit, this is the 16bit newsgroup.

BTW, the only SAM I know is 'System Audio Manager' that came with the Atari Falcon.

Is this anything which will let me read old Atari 3.5" floppy disks - single density or above - on a Mac running OS 10.4.3

I've got a bunch of data which I would like to recover

I wouldn't be surprised if it worked. This requires that you
have a suitable floppy drive for your Macintosh.

You just have to add "Floppy =3D /dev/fd0" in the "config" file.

Best regards,

Hi,

What is the easyest way find out what package contains a specified file. My problem is that when I start Bash, it complains: "bash: id: command not found". I assume that it tries to execute command "id", but it doesn't exist on my system and I would like to know which package to install.

Thanks,
Jozsi

Is there any driver for the ancient hp color LaserJet 5 to work on the Atari
?

these machines are a dime a dozen and ive got one, wouldn't mind messing around with it on the TT if possible. I'm running no fancy OS just the stock as a rock rom OS..

I still do from time to time. I have an old Roland MT-32 MIDI module still connected to my Hades. I have alot of Sierra Online MIDI games that I pay on my STe. I use Sweet 16 on the Hades and Tiger Cub on the STe.

Probably, but the real thing is that machines like the STe and the Falcon are excellent computers. They just came out too late.

I am not really sure. I write for them and I think it is because there has
not been an influx of articles. There are still around because I still get
email from Shuiming from time to time. I was going to do some articles for
them in the near future.

Hello all,

In the past two days my Plextor IDE drive has been causing my Western Digital IDE to boot late after the system has a warm re-boot. It used to take only 1-2 seconds before the IDE hard drive kicked in, now it takes about 30-40 seconds. It does not affect Magic or Tos, but I cannot boot Mint. What happens is that after 15 seconds the Hades thinks no hard drive is there so it boots up what in on the floppy. I am suspecting I need a new cable. Anyone else have an idea?

```

Hi All,
  Our website has moved to a new location: http://www.homasystems.com
We are still supporting the ATARI platform.

We also have a new product (non ATARI) called FireDTV S/CI DVB-S
firewire receiver.
If interested, please refer to http://www.firedtv.ca

cheers

Nima

```

You want NVDI. It has drivers for most printers of that generation, and some modern printers (with LPT port) will also work because the languages are somewhat backwardly compatible.

I don't know if you can buy this now, or where you can get it, sorry. Someone else here will know.

Hi,

Packages that I maintain have been updated according to the
release of the 0.9.3beta version of ARAnyM.

It concerns the followings :

- The <http://eureka.atari.org/xa-my-aes.zip> versatile
boot disk image compatible with AFROS allowing usage of
TOS4.04/EmuTOS and freeMiNT + XaAES or MyAeS.

- The minimum pack <http://eureka.atari.org/pack_aranym.zip>
that is built for Linux.

- The minimum pack <http://eureka.atari.org/MacAranym.zip>
that is built for MacOSX.

Enjoy :)

Or even leave the twist so that when the ST floppy dies, you can just
plug a new PC floppy in without having to mess about trying to adjust
the sometimes non-existent jumpers.

Regards,
  David Bolt

Wow. Those others have been around the Atari scene as long as I can
remember! :-)

E-mail Brad, tell him what you want. He'll e-mail you back with a total.
You can pay various ways (check, M.O., credit card, or like I do - to his
paypal account).

Sorry David, that wont work. The twist and the jumper are two different ways to change the drive and they are not the same. I have tried it myself many years ago on an ST and I got strange errors.

I have some info for you that may help and is quite interesting,

In ST Format Issue 60, There is a program called SAM2DISK, Which is suppose to allow D2D (Direct to Disk) recording (Hard Drive) on any ST, using a sampler such as Stereo Replay, Replay 16, Master Sound, Stereo Master.

The version on the cover disk is fully working except for the save feature of the sequencer section disabled. (I believe you can still record to the hard drive though).

When registered you were suppose to get a few other useful programs.

Does anyone have the full registered version of this program!???
If so, do contact me.

The registration address was listed to be in England and cost 35.99 Pounds!!
Back in 1994!

I have the Cover Disk with the Working Demo of SAM2DISK and remember running it on a 1040STE, but didin't have a sampler at the time to check it out.

This is the only program I know of that claims to allow Direct to Disk recording on a ST!
Maybe there are a few more, if so I would like to know about them.

Guillaume, if you don't have the cover disk, you maybe able to download it from the net.
There is a site that has most of ST Format Cover Disks, I forget the URL at the moment.

Google for ST Format Cover Disks, or Atari Magazines and you should find it.

If you can't find it on a FTP site or Web Site then let me know and I'll extract it off the Cover Disk and E-Mail it to you if you want it.

Douglas C White wrote:
> What is needed to hook up an Iomega Zip Drive?

If it is a SCSI zip drive then you need a SCSI interface and a SCSI driver like HDDriver. If it isnt then you wont be able to use it.

> How hard is it to increase memory, and how much can be added?

Depends on the model of ST and the board revision. Some STFM's have empty positions for the DRAMS (you need to solder them in plus 1 capacitor for each DRAM and add 3 resistors). The STe uses either SIMMs or SIPPS. If SIMMS, then just click them into place, if SIPPS then you will solder them in. Other ST's are a bugger to upgrade and need a RAM expansion board, and lots of soldering.

Thanks to everyone and to D.Briel that sent me the correct drivers for
my NOVA. Now it works fine!

Guillaume.

What I'm looking for is a stable version of Cubase running on my TT. My
experience with cracked versions is that it can be unpredictable / unstable.
I was hopping the dongled version would be better or perhaps there would be
no difference?

Hi!

Only dongled Cubase will work all the time.

Cubase 3.01, Audio and Score (3.05 with Score - I think it�s called
Cubase Score 2) should run fine on the Atari TT030.

Best Regards,

Daniel Mandic

....but getting back to the original point which was:- I have a Cubase ver 3.01 dongle which works on a Mega ST but it will not work on my TT. So if you are correct that 3.01 will run (cracked versions do) and there is not a specific TT dongle then it appears my TT cartridge port is suspect? I'll try cleaning it again.

Thanks for all the replies!

It's possible that its tarnished yes. If cleaning doesn't work the fuse
that supplies power to the port may have blown. You will need to have a
soldering iron to fix that problem though.

Hmmm, I am not sure if 3.01 is 3.1. On the IBM-PC it is 3.05 (that I know), the last version, then came VST.... 3.5, 3.6, 3.7 and so on.

I would suggest that you contact a Cubase Atari expert. It is not understandable for me, why the 3.01 crack works and the 3.01 Orig. not.

Dongel Contacts you have looked, I don�t know more.

Try it on a 16/32bit (ST) Atari!

Best Regards,

Daniel Mandic

i am your "atari cubase expert" it will work ,a sure fire method is to try dongle and program on a st ...i have the manual ..title page states
....cubase ....for the st ste and tt
.......so try on regular st .

i really hope that you can't control the flow of information out your dongle port because if you are able and have had a misdirect, i'm afraid ,the information exchanged may
have defected the dongle .

well you can always sell on ebay ,or you can always buy on ebay.

charles

Have you tried using a head cleaner? If that doesnt work, you could get an external SF314 drive with the same kind of eject button and swap out Drive mechs.

This March I'm celebrating my Birthday! If you want to bless me, I'm trying to raise Capital to buyout an Atari Dealer of all his Atari goods! So give me your Atari business, send all Atarians Marching my way and help save Atari goods from extinction, buying from Ben Saves Atari!

I'm creating a NEW Atari catalog. Catalog's name is NEWINBOX.TXT compiled from all items NEW in BOX from all my other catalogs made up of Hardware, Games/Software and Books for the 8 Bit, ST & Jaguar! Instead of 38 columns of text width it will be 80 column width, Most entries will be 1 line each and sorted alphabetically by title. You'll only find my NEW items in this catalog as I'm removing such NEW item's from their other catalogs.

```
http://BensCatalogs.Atari.org                Atari's for sale!
http://www.aracnet.com/~atari/adoption.htm   Atari Adoption Agency!
http://www.aracnet.com/~atari/birthday.htm   Ben's Atari Birthday!
http://www.aracnet.com/~atari/wantlist.htm   What Ben Wants!
```

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

> So I took FPU routines present in Amiga Doom versions, and now, it runs 2x
> faster (on 060 machines).

hm, am I alone with 100 MHz, boosted data bus Falcon060 with the
problem that doom is AWFULLY slow? I remember the speed of 0.2x
versions, it was playable even on ct2 with nearly full window... and
now, on ct60, it gives me maybe 8 fps?

It's normal? I noticed this rapid speed decrease after switching to
SDL...

I just want to congratulate Patrice on such a great job. I just tested .46
of PMDoom on my CT60 Falcon (95mhz/256 megs SDRAM), using the DOOM 2 wad
and it works great. Sheer speed is the single biggest improvement here.
Sound is better, and somehow, even the graphics seem a little sharper.
Now to go back and try the original DOOM 1 wad.

PS BTW, I've got my Falcon setup where I can do RGB stuff as well. If I
run PMDoom in RGB mode, will there be another performance gain?

PSS Patrice, any chance we'll see the code optimizations from this latest
PMDoom release in your versions of Hexen and Heretic? I always liked
Heretic.

Thank you very much! :-)

Ignore it doofus. It was a mistake. I deleted the post from the news server when I realised I had posted it, obviously it started to get out already.

The speed gain would be against the different video frequency, and bus usage by Videl to draw stuff.

> PSS Patrice, any chance we'll see the code optimizations from this latest

Of course, I'm just rewriting the audio mixing routine, testing it in Doom before merging in Heretic and Hexen.

You're posting from Google groups, idiot. You *can't* "delete it from the news server."

I would just buy a replacement drive and install it. That is what I did when
my Hades floppy stopped working. I bought mine from ATY Computers.

I have version 2.67 of the driver for my ATI NOva card in my Hades. There are some ultilites that came with the drive that allow you to ajust things. Do you have these programs?

>(sorry for my shitty english, I hope youll understand what im writing about

I know that if the route.tab file is not correct, then you will not be able to do anything as far as Ethernet is concerned. When you edit this file, it is very important not to mess up the spacing. Here is what mine looks like:

```
0.0.0.0       0.0.0.0       EtherNet      192.168.1.1

192.168.1.1   255.255.255.0      EtherNet      0.0.0.0
```

I am also using STING 1.26 and my computer is the 1040STe.

It�s a new year which means a new CCAG Show!

Buy, sell, trade, play, and see classic video games, computers, peripherals, memorabilia, and more at the Classic Computing and Gaming Show (CCAG) on May 27, 2006 (and again in October, 2006) at the National Guard Armory, 3520 Grove Ave. Lorain, Ohio from 5:00 PM - 9:00 PM. Vendors, clubs, and collectors will be displaying and selling their retrogaming and retrocomputing goods, from Pong and Atari to Nintendo, Apple and IBM to Commodore and everything in between with many set up for you to play with and explore. We have 5000+ square feet of space. Help us fill it all up!

For more information please go to http://www.ccagshow.com/

Best lowcost solution is Plip. I had that from 98 till 2004 or so. TT had riebl ethernet card and acting as server and IP masquarading machine, while Falcon was my main machine and accesing internet via TT... Speeds were up to 120 kbytes/s... Bad side of Plip is that afaik it require MiNT, so it is memory hungry solution... Good point is, that u only need modified parallel cable and that it is full working network... u can install ftp/www/nfs etc servers and play with little "home" internet, or via TT acces the real one from TT and Mste

But if u dont need speed and not have a lot of RAM (esp on Mste) try midi net or serial....

Janez

Hi Guillaume,

GT>I have bought a NOVA graphic card (ET 4000+VME adaptator) but without
GT>the drivers. I have used the drivers from another NOVA I already have.
if it's really a ET-4000 card, you should use NVDI drivers. From a certain version (4.x?) on, NVDI was all the same for native VDI or graphic cards.

When using the VME adaptor soft, be very very careful when changing the parameters, for you may destroy your screen very rapidly. So please be sure to know whar you are going to do. I had a TV technician

at my right side when I configured the drivers for some reasonable
resolutions (e.g. 1024*768/256 or True Color etc.)

Good luck!

Und TTsch�
ps

Hi Guillaume,

On 11 Mar 2006 13:19:20 , "Guillaume Tello" wrote:

>Just for fun, I'd like to create a little net linking my Mega STE and TT.

>What soft exists?

I would recommend using standard network software:
STiNG seems a good choice for that.
Once the network is on, you can use a FTP and a web server, as well as
clients, of course, to communicate between the two machines.

>What speed can I expect?

The best reliable speed you can get on the Mega STE is 115200. You *can*
use 230400, but in my experience the resulting speed is actually slower.

>What cable?

It's a standard serial cable.

Another solution, more expensive, would be to use two network cards (one
on each machine).
In this case, the speed is of course much faster.

I am getting older, and my eyesight ain't quite what it was. The SC1224 screen is killing me. Does anyone know where I can get a color monitor that is large, and will hook up to an STe? I like to use a real ST, emulators on my PC will not do.

I do have an adaptor for my STe that I have used to hook up to an ancient Everex monitor from 1989, and also an old NEC Multisynch from the same time period. The adaptor I have is the very commonly talked about one that a lot of ST users know about from way back when, nothing quirky or anything. (I have one adaptor that will make the monitor display color, and one for displaying MONO mode on a color monitor, I built them from plans I downloaded on a BBS about 15 years ago) It has the round din for the back of the ST and then the trapezoidal...how ever many pins it was, standard monitor plug of the day.

But what about newer, larger monitors from the 90's and up, any hope for an ST to hook up to one? Will the old adaptors I have for the NEC work, or is there maybe a newer monitor adaptor that would go from an ST to a newer color monitor? Just wondering, hope it isn't a dumb question, but it seems like any time I tried any monitor besides my old Everex or NEC it was no luck. Probably wrong HZ rate or something.

My understanding is that using an adapter like you have, you should be
able to get ST "high" rez out of just about any stock VGA/SVGA monitor.

Now color, thats another story. The monitor in question has to be able to
sync down to 15k. If it can't, it won't display it. Most newer style VGA
and SVGA monitors no longer support this range.

One route you can take is to try and pick up a good multisync monitor from
someplace like Ebay. This is what I did. I found a solid/working NEC 3D
which supports just about everything my Falcon needs for both RGB and VGA.

Another route you can take is to try and spec out one of the modern LCD
TVs, that support multiple input sources, and sync down to that magic 15k
level. The thing is, most of them are pretty darned expensive. If I hadn't
found the NEC 3D, this is what I probably would have done.

I suppose you've already thought about it, because there isn't a huge
difference, but the Atari SC1435 monitor is bigger than the SC1224, and
plugs straight up to any ST/STe. It even has stereo speakers to support
the STe. Some people don't think the picture is quite as sharp as the
SC1224, but opinions vary on that.

Hope this helps ya some... :-)

If this is a 2.5" drive it will fit. If it is a 3.5" drive you can use
it as an external drive and connect it to the Falcon with a stock 2.5"
to 3.5" adapter.
A CF card connected to the IDE port with an IDE CF adapter will also
work, there are several Falcon users already using one.

First of all, congratulations! These are truly wonderful computers.
Falcons are getting harder and pricier to find these days. :-)

1 The external drive, if its a SCSI (which it should be) will work with the Falcon. You might have to search around a bit to find the proper cable. Also, any adapter won't be needed.
2. You can use 2.5" IDE drives inside the Falcon. It has a built in interface for that.
3. There are 3 adapter types for the Falcon; RGB - for use with Atari brand monitors like the SC1224 and SC124, VGA - for use with virtually any PC monitor, and multisync, that gives the ability to do both RGB/VGA if your monitor will support lower (15k) horizontal for RGB.
4. There are a couple of options to network a Falcon. You can use the EtherNEC (cartridge port), or if you're lucky enough to get your hands on a CT63/CT60 accelerator, you can get Natures' EtherNAT. Those are the ones I'm familiar with. I'm sure there are a few others as well.

HTHs.

After some quick research, it looks like a 2 1/2" drive will do the
trick, it will just plug in and work, with a bit of formatting I think.
What height drive, is 9mm Ok ? and where can I get a cable ?
Also does size matter :) ? all the drives on eBay are 10Gb plus.
(I might just pinch the drive out of my STE)
Thanks again.
Jammer.

It was down to .56 per share after they made their announcement of
financial status, but has rebounded back to what it was originally
before then. They just announced a restructure which will help put
them in a profit making position again within the next year.

Yes, 9mm I think will be okay. Do you know if you're Falcon has the hard drive mounting hardware in place? If not, you may have to try to pick it up. You should be able to get cables from just about anyplace that sells HD stuff. Specifically, Best Electronics and B&C Computervision are 2 Atari dealers that just rule.

You can use the 10gig models no problem. At this point, I have to recommend spending some dough on HDDriver. IMO, its the best hard drive software for Atari computers. Uwe Seimet posts here often, and gives great support.

You're gonna have lots of fun. :-)

Note that some old IDE drives may be damaged when formatting them. As long as a drive has no bad sectors formatting does not make sense anyway. The filesystem layout is what is important, and this is created by partitioning, not by formatting. In other words: Partitioning is usually all one needs, even when a drive was formerly used with another operating system.

I now have a 66MHz oscillator happily running away in the CT60. My
CTCM was apparently the reason behind the inability to boot -- it
somehow got something corrupted, and I was without my speed for a
couple of months until something someone posted on ct60.dhs.nu gave me
the inspiration to try a replacement clock.

A Falcon at 16MHz is very usable -- one at 66MHz is very pleasant!

Galen

You can buy one from the official sources already mentioned when you
were asking for illegal copies several times in the past :-).

sinclap@yahoo.com wrote:

> Try running a modern OS on it and see if it's useable than.

Ok. I've gone for quite a while without replying to you. Sometimes I agree with you on some or all of your points. Other times, I just ignore your posts. But when you disrupt productive discussion (at least for those of us who actually use and enjoy our Atari's), that's just *not cool*. Please stop this childish idiocy. I know people have told you this for years, and you haven't listened, so maybe I'm just wasting my time. But I just had to say *something*.

I know you're a Mac guy. I have a Mac that I'm using right now to write this. But I have to tell you, aside from Internet use, which I admit Atari's aren't even close to being useful with, I hardly ever use the Mac for real productivity. I use my CT60 Falcon. Maybe it doesn't have a "modern OS" as you say. Who cares?! Does it really matter how many cool bells and whistles an OS has if it doesn't meet your basic needs, where an older, not so flashy OS works beautifully? The OS I use (Magic 6), when configured correctly and with the nice add-ons available now, is *much* better, in my opinion. Yeah, it may not have all the bells and whistles of MacOS X, but so what?! It does what I need it to do, the way I like to do it, which MacOS doesn't. MacOS (and Windows to an even further extent) really annoys me on a lot of points where my

Falcon shines and is very enjoyable to use. I can fly through a project on my Falcon, while I keep running into frustration because the OS is so stinkin' inefficient for what I do with it. The Falcon is so much more superior to my Mac as far as how I like to work. That's just my opinion, and you may not agree, but you're not me.

Oh, and just to stay on topic... Galen: great to hear you've got your oscillator replaced! :)

> I am looking for a copy.

You can sometimes find second-hand copies from time to time. I got mine for about $50. Otherwise, browse the bigger Atari dealers suggested in other posts and buy one there.

Looking for the following Items....

Matrix Screen Eye Digitiser for Atari Falcon

68882 Co-Processors for Atari Falcon from 16 to 33mhz. (Need at least 3
maybe more)

Co-Processor for 386SX. To use in ATonce 386SX board for Atari MSTE.
(one out of an old 386SX PC should work)

TOS 1.62/2.06 unit for 1040STE. Must be able to switch between Tos versions.

Atari Falcon Field Service Manual.

A Unit that connects to Falcons DSP that allows more input/output ports and
or different
recording recording frequencies. Open to all types of these units made.
(Have Cubase Audio Falcon, Dongle, and DSP clock.)

Non Working Atari Computers of all types. Especially Atari Falcons. Could
use a non working
Stacy or two.

Stock Falcon, MegaSTE, TT cases. (Where owners have recased there machine and no longer need the Stock case).

Mega ST, MegaSTE, TT working and non working keyboards.

English Documentation to install a OverScan Board in a Mega ST.

Apex Media versions between 2.00 and 2.41 (Manual is not required)

ICD ADSpeed Accelerator (working)

Various PC emulators on boards (working)

SYQUEST Units for Ataris (working)

Replay 16 Cartridge, software, and manual (working)

Any other Atari related items, can be submitted as well. I'll consider any thing.

Also looking for older External CDROM drives and Hard Drives.

Will trade other Atari Items or purchase for the above items.

OverSeas Items are welcome.

Send list of what you no longer need to me at:
phantomm@bellsouth.net

You find one on Ebay deutchland. It's a 20MHz plcc (good for Falcon).

See you,

Cyril.

If you have a SpareMiNT system and are interested in sudoku: I recently
uploaded a very nice sudoku solver/generator to the sparemint website.
Sources and Binary are available there as SpareMiNTRPM package.

It has a curses interface and runs nicely in my Toswin2 window. Only the
keybindings need some improvement: The cursor keys don't work , but you
```

can move the cursor using the vi(m)-style h-j-k-l keys.

I also ported another Sudoku solver called "Suds". Nice bookmark test. To solve an extremely difficult Sudoku on my Atari 1040 STf took approximately one minute. My Falcon030/CT2b needed 5 seconds. On my Aranym emulator it's a matter of milliseconds :-)

Hello,

My purpose is not to copy another's method but to create mine. I want to finish my own work. I'm not interested in SUDOKU, much more in programming...

Thanks for the infos, those programs could be a good comparison, and maybe a way to control my results.

Guillaume.

Our old Atari user group still meets monthy to chat (none of us still
have our old boxes) and the question was asked - are there Atari clones
being developed (like the Hades) in Europe or elsewhere and, if so, how
are they doing ???

I still think Atari's "TOS on ROM" was the best idea ever developed.

I've just put up some pics of my Falcon on www.mevagissey.net/atari
Anyone able to tell me where the hard drive is usually mounted.
Is there a PDF version of the manual around anywhere ?
Cheers

Hi Jammer. Check your e-mail. :-)

> Is there a PDF version of the manual around anywhere ?
> Cheers

That I don't know. Have you tried googling for it? Might get lucky there.
Otherwise, they are about $20 or so from dealers.

Been looking at the Gemulator 98 CD that I recently got.

Was there a hardware device that came with this CD?
If so, is it a must to use the ST emulator software?

Not sure if I have the manual for the CD, will have to look around.

Was wondering if this was the last version of the CD and if this version will work on XP?

www.emulators.com   was down when I last checked.

Does anyone in the group use Gemulator any more?

If so, Does the ST emulator software work well, and will most ST software run on it? Also, does any Falcon only software work?

I wouldn't mind being able to run a few ST programs on my HP or Sony LapTop using the Gemulator 98 CD if possible. (Both Laptops run XP)

I've never ran any Atari emulation software on a PC before.
I do have the ST Xformer Cable and SIO2PC Device.
I have experience in transfering Atari 8-bit files to the ST/Falcon.
I've not used the SIO2PC device yet.

Any thoughts or tips on using Gemulator?

```

I'm looking for some other type of Storage Devices to use on
Atari ST-Falcon, other than hard drives and CDRW drives.

I know about SCSI Syquest Drives and similar devices,
what other type of SCSI or IDE Storage Devices can one use?

I'd like to be able to do D2D recording on any SCSI devices
if possible, but not necessary.

phantomm@bellsouth.net

Do you see the four screw mount points between the floppy and the power
supply?  That's where a little quadrapod (4 legged tripod) is placed.
The 2.5" drive sits on the quadrapod.

Gemulator had an optional hardware device. However, without the hardware card you can still use it if you have a copy of TOS as a file. Gemulator 2000 could find the TOS file in various places, but early versions have to have it named MAGIC_PC.OS and located at C:\ (the root of the boot drive). I do use Gemulator under Win98, so I'll try to help. Note however, that STeem has come a long way, so I am starting to prefer it.

Actually, yes I can. In addition to my ST, STe, stock Falcon, and CT60 Falcon, I also own a dual G4 tower, a G3 iMac, and a PowerBook 3400. The G4 plays my podcasts quite well while I type on my Falcon!

MOD drives, DAT drives, DVD burners. There are not many other device
types to store data with.

That is not a modern OS.

The kernel concepts are 35 years old.
The hardware models are not as good as 40 years ago.

The rest is applications benefiting from speed and
volume, which are the only modern aspects.

No, you need some bios roms.
http://steem.atari.st/download.htm perhaps

> Not sure if I have the manual for the CD, will have to look around.
>
> Was wondering if this was the last version of the CD and if this version
> will work on XP?
>

2000 was I think the last version.

> www.emulators.com   was down when I last checked.
>
> Does anyone in the group use Gemulator any more?
>

From time to time. It will do things some emulators won't. Especially big
screens...

> If so, Does the ST emulator software work well, and will most ST software
> run on it? Also, does any Falcon only software work?
>

As "MOST" ST software is games, most does not work. For games use STEEM or
WINSTON.
However it will run various shells, editors and compilers so its usefull for
development.

> I wouldn't mind being able to run a few ST programs on my HP or Sony
LapTop
> using the Gemulator 98 CD if possible. (Both Laptops run XP)
>

If they are games use STEEM. I use STEEM on my laptop with a USB game pad.
Has a very good "st" feel. Things like Buggy Boy and Winter Olympics run
really well...

> I've never ran any Atari emulation software on a PC before.
> I do have the ST Xformer Cable and SIO2PC Device.
> I have experience in transfering Atari 8-bit files to the ST/Falcon.
> I've not used the SIO2PC device yet.
>
> Any thoughts or tips on using Gemulator?
>

There are some auto programs to run bigger screen sizes +> use them.

  **********************************************************
```

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

programming
ftp://chapelie.rma.ac.be/atari/programming/windom-2.0.0-1.zip
(5.285.320 bytes) Windom is a C library to help programmers to build GEM applications.
The package contains English docs, exemples, a demo, a tutorial, etc ...

utilities
ftp://chapelie.rma.ac.be/atari/utilities/clocky_g.zip
(8.031 bytes) German Resource file(s) for Clocky 3.1b 'SETCLOCK.APP'
(part of Joy Clocky 3.02F jclk302f.lzh)

Have fun,
Martin

Uwe, any chance you could get other cards to be read by HDDriver?

I've got a digital camera and would love to be able to read the SD
card and download the pictures.

I agree with Rudolphe. Disable parity. It's really not need on the ST.

I believe the other reason the Yamaha CDRW doesn't work with the MegaST4 and ICD Link 2 is because the Yamaha CDRWs use SCSI arbitration. Only the Link97 supports this. The Falcon and TT also support parity and SCSI arbitrarion. That's why it works on your Falcon.

Does any one know the what alterations (bug fixes?) have been made to the so called SuperTOS 2.06 as compared with Standard TOS 2.06?
Also is there a source of info re the fitting of TOS 2.06 2 ROM set into a STFM with 6 ROM chips?

Thanks in advance.

Upgrade your OS? To what?

Seriously though if the Hard Disk unit has a 19pin D connector on it then you just need a DMA cable. If not then you need a SCSI interface - good luck in finding one.

TOS 2.6 cannot work on ST, STF, MEGA ST, all atari with ROM space at $FC0000 to $FEFFFF (192KB).

TOS 2.6 on STE, MEGA STE, all machines with ROM space at $E00000 to $E3FFFF (256 KB).

To use a TOS 2.6 on ST machines, you have to decode the $E0xxxx addresses with a GAL....

I think I already told that several times here...and several years ago (in 1993) I was selling a chip named MODE2.6 to adecode and allow use of TOS 2.6 into STF & MEGA ST...

I have yet the JEDEC file...

Regards

Yes I use Gemulator all the time for all my correspondence and accounting work, including Income Tax, and plans are done with Gfa Draft. I have not found another emulator which does ST Writer, Marcel, and LDW Power, and Gfa Draft so smoothly and without any hesitation.

I use TOS 1.4 as well as TOS 2.6, downloaded from a web site. easier than taking them from my STFM.

It may be that other emulators such as STeem do games better, but I don't play games.

Or you can do it with 3 IC's,

http://www.umrk.org/atari/tos206up.txt

I have done it a couple of times. It works well.

You can do what I did. If you can find one, just get a Link II interface and you will be able to connect the drive and get it running.

Actually that version you have is newer than mine. My version actually ran pretty darn good for me. But you must realize that Quick ST later became Warp 9 which made the ST ran a little bit faster.

The version of HDDriver doesn't make a difference. Your host adapter
does not support the SCSI features that the Yamaha drive, and possibly
newer drives, require.

You need to use a Link97 at least.

The fact it works on the Falcon is because the Falcon supports SCSI2
natively.

Simon

YES ! That works. I could have known, I have read it somewhere before. But
TOS and MiNT are so user friendly : I didn't need the Help key for ages
;-)

Hi Simon. Thanks for the reply.

You just might be on to something there. I just double-checked the dates
on the 2 CDRs that I was playing with. The Plextor that works is dated
"March-2000". The Yamaha that does NOT work is dated "December-2000".

Could it be as close as that, just a few months? :-(

I've got ICDs Link2. Its handled everything I've thrown at it up till now.
As for upgrading to the Link97, they are no longer available commercially
right?

Okay, while testing some software I figured out that my CT60 Falcon is not holding the time/date. Its booting up somewhere in 1971. Worse, I can use Xcontrol to set the time and date and it won't even hold with the machine turned on! That is odd. I can see it changing between starts, but even while the machine is running?

Is a dead battery the most likely culprit? If so, whats the easiest way to add a new one. It doesn't look as easy as changing the batteries on my Mega ST4... :-)

Thanks.

The battery is a RTC also... are you tried to clear the NV ram ? that seems to be the cause of most silly things like that... might have got corrupted ?

Chris

iTunes? LOL I don't even use my MAC to access iTunes.

Anyway, post the link to qualify your statements, troll. In fact don't
bother. I'm not interested.

Nope. Whats the best way to go about that? I've got a CT60, so is there
any special considerations because of that?

Thanks

|> I though it wasn't normal. Now I need to find out why. If you ever
|> get to take one of the drives apart maybe you could note the position
|> of the jumper pins inside. There are three sets one of which is for
|> the ID's. The others are not mentioned in the manual which I traced
|> for these drives.

|I have a third unit laying here, bare mech. There is a plate with a screw.
|Under this plate is the terminators and the firmware jumpers. Assuming you
|terminated it correctly the jumpers under this plate should be ignored.

My Falcon/CT60 is in a tower case and I have terminator where the SCSI chain comes out the back of the case so termination on the drive hasn't been required. You've now identified the firmware jumpers which I'll also leave well alone. That just leaves a third set but you'd need to take the metal casing off to get to them. I'll try and take mine appart this weekend.

|There is a hole near this plate which exposes the SCSI ID setting. I'm not
|sure how my settings here will help you. This drive is not in use and the
|ID is not even set. If your manual at least explains the one visible set of
|jumpers, then that is really all you need.

I'd worked out the ID settings, changing it from 1/2 to 5/6.

|> I've not managed to get the first icon to respond. The others respond
|> to slot 1 and 2 respectively. I could as you say just delete it.

|I'd remove all 3 icons, then force the desktop to reinstall them. Maybe the
|extra icon is unrelated or it got there some other way? If all 3 icons
|reappear, something is for sure working strangely. At least with most
|desktops, once you have saved the desktop arrange, all the icons will reload
|the same way on every boot up. Meaning, if you swap the drive, do not
|expect the extra icon to just vanish, you probably have to manually remove
|it. I don't use magic, so my statements are based on my MiNT setup.

I've done some reorganising when I added a 10Gb drive and then later repartitioned my original 2.1Gb drive down from 6 partitions to 3. I also swapped over my card readers. Each time it came back with three icons even after deleting them. On the software side I upgraded from MagiC 6.01 to 6.2 and HDDriver 8.04 to 8.16.

|>The camera is a Canon IXUS 50 and came with it's own 16Mb card. I
|>later bought a SanDisk 512Mb Ultra II card. Both act the same.

|>Unfortunately the manual for the camera is in French. I couldn't see
|>anything that gave information on file types.

|I went to the Canon site and obtained the manual in English. It infers the
|SD card from the camera is readable on a PC or MAC simply via a "card
|reader" and an adapter may be required. So in theory it should work and one
|can assume it is stored in some standard format if these OS's can read it.

Thanks for the manual. Looks like I've got a lot of printing to do!
I'm less worried about the three icons more about why the card isn't
recognised. I'll have to recheck my system to see if I've got anything
set up wrong.

sinclap@yahoo.com wrote:

> Nice try! So why do you need to run another OS if the included
> standard one was suppose to do all?

Please tell me who said TOS/GEM was supposed to do all, and *quote* the post. You don't still run the original Mac System 7, do you - I mean wasn't System 7 supposed do all? Of course not! But that's exactly what your question is asking! I won't run an OS that's 15-20 years old when I can run one that was updated as early as this month (aka "modern")!

I don't think of the built-in TOS/GEM as the real OS, except when the rare old game or demo needs it. Similar to the concept that MacOS X uses, actually. Why do you need MacOS 9 installed in addition to MacOS X? To run old stuff that OS X won't.

Personally, I very much like the fact that TOS/GEM is built into the ROMs, over which I can run a variety of other OS's to fit my tastes (Magic, Mint with all it's various AES's, and even Linux). And then when the occasional problem does occur, I can still get a workable GUI, access the Hard Drive to correct the problem, and I'm instantly up and running. Try that on your Mac!

On my Mac, when I've run into problems I've had to stare at a sad face on the little 1980's Mac symbol you see at bootup, while trying to find where I put those darn system restore CD's, reboot from the CD, reinstall the entire OS, get all my data and more recently updated software back into place... Huge pain in the butt! When similar events occured on my Falcon, I rebooted while holding down the Control key, which instantly gave me a usable GUI, removed or replaced the problem program, and I'm instantly up and running. When I did have to reinstall the more modern OS, it was very quick and didn't replace all of my updated software - only the core OS files. Much easier, much smoother.

Greetings,

I have an Atari STacy, but do not have a manual for it.

I need to know what kind of internal Hard Drive was used in these,
and there size (2.5), (3.5)?

I'm hoping that a larger hard drive can be installed on the inside.

Also, I notice a space under the internal disk drive, Can this space be
used to install another drive or something or is the space under the disk
drive full of hardware?

Also, anyone happen to have a English STacy manual that they don't need?

And, I suppose the STacys have TOS 1.04. If so, how many chips make up
TOS 1.04 in the STacy and can TOS be upgraded to 1.62 or 2.06?

If so, would this be the same type of upgrade as for a Mega ST or 1040ST?

I do not think CT60 effects the clock, you need a program to clear the
NVram, There are plenty around in the PD, you could try a search though
floppyshops utils there will be loads of programs in there... I do not know
of any utils offhand, didn't CT60 have a option somewhere to clear NVram ?
Not saying it is that but worth a try... maybe rodolphe could help you
better with that...

Chris

So, the ST can't do all. Need to rely on other OS platforms to be
productive and creative.

Never gotten a sad mac before. You need to move on from the 80's
experience when computers of all types had crashing issues. I knew
some who had ST's that took months for warranty repairs.

There is CBOOT to clear and set the NVRAM.
CBOOT is inside the CT2.ZIP package on my web site.

But the Time/date function cannot be corrupted by software ...
software can corrupt NVRAM...but the RTC is independent...
The test is simple : Put the correct time & date....turn OFF....
Wait for 1 minute at least...
Turn ON....if the date/time is stupid, the battery is dead...

Nothing to say more !

Now you can remove it (unsolder) and solder a new one for 10 more years ...

Buy it for 11 $ at BEST Electronics (San Jose CA) !

So simple too..

Regards

Sure !

If I well remember; my prototype in 1992 was done with 3 chips   ;-)
One is a 74xx645 I think to decode some address bits.

Really? My Falcon always looses its time after shutdown, ok so the
battery is broken, no problem.

BUT: when i correct the time and date via the control panel and run an
app it is fine, but it gets corruppted again when I return to the
desktop WITHOUT shutting the Falcon off. Is there a solution?

Matthias

Why are you talking about productive and creative? You're neither, only disruptive and destructive. Your mother should have taken *you* back for warranty repair. How many months of electroshock treatment will it take to straighten *you* out?

Back again.
I've got a CF-IDE adapter, but am not 100% sure that I've got the cable
the right way round. Could someone who knows, have a look and give me
some advice.

Why not? I still use Mac OS 7.6 on my PB540c...

> I won't run an OS that's 15-20 years old when I can run one that was
> updated as early as this month (aka "modern")!

I also still use Mac OS 8.6 on my G3-MT - it's fix & small...

Hi Charles,

Well, ask a frenchman! I'm one.
You can send me what you don't understand, I'll try to help.

Guillaume.

     Hi zika(?),

1. (no idea)

2. Probably "Ballerburg". You could choose one of a set of castles with
varying shapes and number of guns. There is a king, money, gun powder and
bullets and much more...

     Regards,

          Alexander

The second one sounds like 'Rampart', a remake of the Atari coin-op.

Hi,

Do you think it's possible to capture a sound (with a ST replay, timer A at 11 or 22 KHz) and to save it at the same time? (a double buffer: while I fill one, I save the other).
Is it too much for a Mega STE?

Your remarks please before I start a non-running program!

Guillaume.

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

```

This March I'm celebrating my Birthday! If you want to bless me, I'm
trying to raise Capital to buyout an Atari Dealer of all his Atari goods!
```

So give me your Atari business, send all Atarians Marching my way and help save Atari goods from extinction, buying from Ben Saves Atari!

I'm creating a NEW Atari catalog. Catalog's name is NEWINBOX.TXT compiled from all items NEW in BOX from all my other catalogs made up of Hardware, Games/Software and Books for the 8 Bit, ST & Jaguar! Instead of 38 columns of text width it will be 80 column width, Most entries will be 1 line each and sorted alphabetically by title. You'll only find my NEW items in this catalog as I'm removing such NEW item's from their other catalogs.

http://BensCatalogs.Atari.org	Atari's for sale!
http://www.aracnet.com/~atari/adoption.htm	Atari Adoption Agency!
http://www.aracnet.com/~atari/birthday.htm	Ben's Atari Birthday!
http://www.aracnet.com/~atari/wantlist.htm	What Ben Wants!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

hum, this is not normal here...
As long as thepower is here, the RTC should running...
I think there is a software problem (corrupted CPX or something like this
!).
Try to boot with nothing....

If I am not mistaken, there are a couple of good NVRAM programs that come
with
the CT2B Software. I know I have used them alot in the past.

Not sure if there for non CT2B Falcons or not.

But there are very good.

Hey Folks,

Just for the record, Where is the Falcons Battery located at on the motherboard?

And is it just a battery or part of another chip?

I thought that the battery and NVRAM was made together. Or it was part of another chip. I must be wrong??

Also, Ron if you are reading this and need a battery, I may be able to supply you with one.
I have a Falcon mother board for parts that has just about everything on it.

You may want to try and get a new one if possible and not to expensive.

I think it is possible, since the MSTE is 16mHz.

This is a project that I have looked at myself.
I wanted to create a way to transfer small speech/sound recordings
from the Falcon or other Atari to another Atari while both are connect to
the net.

So that one could really talk to one another.

After getting this done, then one could maybe add some pictures or maybe video
using the VideoMaster Falcon or VideoMaster ST cartridge.
(Really a program to transfer sound and maybe video too could be done based on
the VideoMaster cartridge since it does both Sound and Video.)

I don't see why this hasn't been done by someone already.
I know it would work with Falcons. And should work with Ataris with
good cartridge based sound digitisers.

If you are just want to basically do Direct to Disk recording on a MSTE. I think it is
possible. If I am not mistaken, there was a program on a ST Format Cover disk that did
this using some type of Cartridge based Sound Digitiser.

By all means create anything that you can in this area, as not much has been done yet.

Thanks for the offer Barry. I'll probably go with Brad at Best
Electronics. A brand new one there is only $11.95 so thats okay.

:-)

Hmmm...I know that area, I think the NVRam is around there as well.
Would have to pull out the mother board to make sure. Of course
the NVRam needs a battery to keep it's settings. That's why I thought
that both were in the same chip.
I'm going to have to order a Falcon Field Service Manual.

Well from the price that you are getting it for, I would think a NVRam chip
would cost more.
Then again it depends on the supply. Not sure how long that Battery is
suppose to last, but I'd
bet that a few more Falcons could use a new one.

That's not bad at all, go for the new one of course.

Here is something I would like to know, When the Battery goes bad or
completely
out, One can still use the computer right?

Generally the red wire is set to pin 1.  Is the IDE adapter plugged in
correctly?

This is less a question of software but rather of the available
hardware. For CF cards cheap CF to IDE adapters are available. If
similar adapters exist for other cards HDDRIVER is most likely capable
of accessing these cards in the same fashion.

Hi,

I have a Compaq E500 laptop powered by Linux Fedora Core 4 running ARAnyM.
I'm trying the GBE GfaBasic Editor and it runs nicely. I have one problem

```
though: my laptop does not have a HELP key. At least I haven't found it
yet. This is very annoying because it is used very much in the GfaBasic
editor (original as well as GBE) to fold/unfold Procedures - a feature
that I've always loved. Can someone come up with a solution ?

Sure is. Its 2006 and you still don't have a clue...or a life... :-)

Sinclap,

Again, all you are doing is screwing up a legitimate thread discussion!!!! STOP!

So I'm starting a new thread, which people can weed out with filters...

sinclap@yahoo.com wrote:
> Typical 90's response.

What the heck does that mean!?!?!

> I can't run Metatrader on a ST, as well as my iLife suites. The OS has
> not kept up.

Just because you can't run very specific software on a very specific OS doesn't mean that the OS hasn't kept up. There is a *lot* more software for Windows that's considered "modern" that doesn't run on MacOS. Does that mean that Windows is more advanced than MacOS?

And just because Metatrader and iLife are apparently very useful programs for you, doesn't mean that anyone else necessarily cares for them.

Need some specifics? I listen to streaming audio quite often, even though I'm on a measley dial-up system. FalcAmp on my Atari running on a 31.2k connection can maintain a stable connection *way* better than iTunes on my Mac running on a 49.3k connection can. So, I use FalcAmp. I also use Aniplayer more often than iTunes. The only advantage that iTunes currently has for me is that it can run some cool visualizations. But that's just meaningless fluff, albeit entertaining at times, and I rarely use it. So iTunes, which is a "modern" application by your standards is pretty much useless for me, in areas where FalcAmp and other Atari-based programs are extremely useful.

Another example: People send me MS Word files and Word-created RTF files all the time. Papyrus on my Atari seems to handle them a whole lot more accurately than AppleWorks. There was one case where AppleWorks couldn't view an RTF file made by Word. I loaded it into Papyrus just fine. I then saved it again as RTF. The file size went from 30k down to 7k, and AppleWorks read it just fine. Does this demonstrate how dumb both Word and AppleWorks are, where Papyrus is superior? Not nessecarily, but it does show that it's more useful for what I do.

No one argues with you that an ST isn't modern (that's why I have a Falcon, not an ST :)). It's 1985 technology, or hasn't anyone filled you in? There are Atari's, upgrade cards for Atari's, and Atari clones that are closer to being modern, but again, none of them are state of the art. That's not the point, which I guess is something you don't seem to be able to understand. We enjoy it none the less. Who cares if it can or can't run the software you mention?! By the way, can you run these pieces of software you mention on Linux, which is a modern OS? I would guess not, but I'm not sure, so that's a legitimate question. Also, Atari's *can* run Debian Linux and have a "modern" OS, if we want to. Most don't because Magic or Mint serve us better, and work faster without losing any usefulness. And guess what! We have an OS that's dated 100% within the 2000's - Mint, XaAES, and Teradesk. Ok, not quite "modern" by your standards, but who really stinkin' cares?

There are people who have and truely enjoy '57 Chevy trucks. Oh my gosh! They can't go 0 to 60 in 0.2 seconds, don't come with XM Radio, GPS, and OnStar, and aren't Hybrid or can't run on E85! But they enjoy them for what they are, and some even find good uses for them.

THAT'S THE POINT! (smacks Sinclap upside the head)

I use a CT60 Falcon, not because it can run the latest software suites, not because it's got the most "modern" OS, and not because some corporate machine named Steve or Bill says I should. I use one because I enjoy it immensely, and ***it gets the job done that I need it to do much better than my Mac can, believe it or not!*** My Mac is basically a dumb internet machine, and that's it. I only have one because my Falcon can't to Web Browsing very well, and I can't stand Windows. When/if ever they can get Web Browsing up to date on Atari machines, I'll probably never use my Mac. Whether this is a "typical 90's response", I don't know, and I don't really care. I use what I use, and you can't tell me that my machine isn't useful enough, because you aren't me, in my situation. If the Mac does what you need it to do the way you like to do it, then I'm very happy for you. I'm not telling you to use an ST, and no one else here is. I really don't see where you get this dilusion from.

Now go play with iLife and give this stupid ranting up.

They work as well. All in all ZIP and JAZ drives are nothing special,
just one kind of removable media drives.

Interesting piece of hardware! Was there a driver for GEM of did you have to work always with two screens: one with GEM and the other with the special software written for this graphic board?

On the photos we can see 4 connectors on the back side of it. I suppose:
- parallel input from the ST
- parallel "thru" to chain the printer (seem to be a RS232 output)
- VGA out
- a SCSI connector.

The board seem to be limited to 4 planes (16 colors) and can be enhanced to 8 planes (256 colors).

But the seller doesn't ensure that it works...

Guillaume.

Hi,

> Interesting piece of hardware!

Yes, it has been sitting unused for a very long time so it would be better if somebody else gets a chance to play with it!

> Was there a driver for GEM of did you have to work always with two
> screens: one with GEM and the other with the special software written for
> this graphic board?

The ParSec was designed to connect to a 2nd monitor, which was used for primary output. The ST could of course still output to its own display so you had a dual-display setup (ST monitor for main dialog boxes etc. and ParSec for graphics and other appropriate menus/toolboxes if needed).

The ParSec was responsible for all drawing to its own display of course.

> On the photos we can see 4 connectors on the back side of it. I

> suppose:
>   - parallel input from the ST
>   - parallel "thru" to chain the printer (seem to be a RS232 output)
>   - VGA out
>   - a SCSI connector.

That is correct. The RS232 is one of the ParSec's own communication ports as it is effectively a computer in its own right, albeit one designed for drawing to a framebuffer.

The VGA port however I think is an 'old' style one, and may need an adaptor for a standard VGA monitor these days (Although that is from memory - I can't be sure about that now!).

>   The board seem to be limited to 4 planes (16 colors) and can be
> enhanced to 8 planes (256 colors).

Yes, thats also correct. The enhanced version supported 256 colours from a palette of 16.7M.

>   But the seller doesn't ensure that it works...

Unfortunately not. It is untested. However it hasn't been messed with since it was made, and came from the original company (ElmTech) so chances are good that it works. It is just unsold stock.

Doug.

I have a Hades060 and have been using it since 1996. Great machine, however it is not being made anymore. The clones are not either (Milan, etc), but they do still exist and are being used and sold.

I have a Jaz drive in my Hades system and it works quite well. There are tape drives and I have used those with my ST using DiamondBack III. That worked well also.

Yes I have those, but it is commercial. A lot of the Atari Dealers still sell Magic but you can get it from ASH (Applications Systems Heidelberg).

I have seen demos on the Net for download. It would seem that you should be able to get it as it is an old program. You might try searching for Quick ST which also worked very well. There are some others on the Net that worked pretty good on the ST.

Anyone know if there is a program that will produce a PostNet graphic picture of various US postal codes that is made for the Atari? I know Gemvelope will do it, but I use Calamus for printing envelopes. I was hoping that the 2006 upgrade of Calamus would have this, but it did not.

Hi Martin!

Do you have F11 and F12? This is where Undo and Help atari keys map in
most of the emulators and even for ARAnyM. We might want to make it
configurable but so far we didn't find any user not having F11/F12 on
his PC keyboard.

Best Regards

STanda

the million dollar question is, what software would actually take advantage
of it ?

"dml" <dml@dml.dml> wrote in message
news:RsadnQC_zNS0DJzZRVnyiQ@eclipse.net.uk...
| Hi,
|
| >   Interesting piece of hardware!
|
| Yes, it has been sitting unused for a very long time so it would be better
| if somebody else gets a chance to play with it!
|
| > Was there a driver for GEM of did you have to work always with two
| > screens: one with GEM and the other with the special software written
for
| > this graphic board?
|
| The ParSec was designed to connect to a 2nd monitor, which was used for

| primary output. The ST could of course still output to its own display so
| you had a dual-display setup (ST monitor for main dialog boxes etc. and
| ParSec for graphics and other appropriate menus/toolboxes if needed).
|
| The ParSec was responsible for all drawing to its own display of course.
|
| >   On the photos we can see 4 connectors on the back side of it. I
| > suppose:
| >   - parallel input from the ST
| >   - parallel "thru" to chain the printer (seem to be a RS232 output)
| >   - VGA out
| >   - a SCSI connector.
|
| That is correct. The RS232 is one of the ParSec's own communication ports
as
| it is effectively a computer in its own right, albeit one designed for
| drawing to a framebuffer.
|
| The VGA port however I think is an 'old' style one, and may need an
adaptor
| for a standard VGA monitor these days (Although that is from memory - I
| can't be sure about that now!).
|
| >   The board seem to be limited to 4 planes (16 colors) and can be
| > enhanced to 8 planes (256 colors).
|
| Yes, thats also correct. The enhanced version supported 256 colours from a
| palette of 16.7M.
|
| >   But the seller doesn't ensure that it works...
|
| Unfortunately not. It is untested. However it hasn't been messed with
since
| it was made, and came from the original company (ElmTech) so chances are
| good that it works. It is just unsold stock.
|
| Doug.

|This is less a question of software but rather of the available
|hardware. For CF cards cheap CF to IDE adapters are available. If
|similar adapters exist for other cards HDDRIVER is most likely capable
|of accessing these cards in the same fashion.

This is interesting and I apologise if I cast any aspersions on HDDriver!

I've got two SCSI/PCMCIA card readers and both read CF cards without problems. Put another card in and I've tried two SD cards and an xD one and you get a ping and the card doesn't respond. Try the PCMCIA adapter in a laptop and you can read whatever card is in it.

I'll get another PCMCIA adapter for SD cards alone and see if that makes any difference.

|If one gets a hold of a scsi->pcmcia card reader, most any card you pop in
|there just works. I have used SmartMedia, CompactFlash, and ordinary PCMCIA
|memory cards without any problems with HD Driver. It's only a matter of an
|SD adapter for the PCMCIA slot in my case.

I've got two Microtech internal PCD-25BH dual slot card readers. Both
act the same. The problem maybe the PCMCIA adapter. The one I've got
is a is a six way one. I'll get one for SD cards only and see if that
works.

One thig I had noticed with these readers is that I get three desktop
icons. Is this normal?

This is only normal if there are three partitions on a device.

Two general hints:

- My database says you are using HDDRIVER 8.0. 8.1 may be a better choice for CF/SD cards since it contains changes that were relevant for certain CF adapters. I suggest that you try the demo version.
- Like with any other device SD and CF cards must contain a valid Atari-compatible partition table. In other words, one must partition them just like a hard disk drive. Otherwise TOS will not recognize them. Did you partition your cards before trying to access data on them?

The OS has to be modified for that. I did find a doc online detailing that
mod, there's no real advantage as far as i can tell.

...Just the software that comes with it (the art package), and any you might
want to write yourself using the comms. info at the back of the manual :-) I
think Jeff Minter did basically this when he got his hands on the first
prototype. Its mainly of interest as a programmable GPU & framebuffer for
the tech oriented, or as an Atari curiosity piece. I wouldn't expect it to
be tremendously useful for the general user.

Doug.

Just to make it a bit more precise: If the file systems are MSDOS-FAT or VFAT etc. the card can be read by MagiC or MiNT. The hard disk driver is not responsible for dealing with the actual partition data; it does only ensure that the operating system gets access to the partition meta data like partition IDs and start sectors. Everything else depends on the drivers for the file systems on these partitions.

Since the number of icons displayed by TOS depends on the number of
partitions found I assume that you have two partitions on your cards? Or
am I missing something?

|>
|> One thig I had noticed with these readers is that I get three desktop
|> icons. Is this normal?

|This is only normal if there are three partitions on a device.

I was thinking this but I know that some versions of this drive have
three slots. There are three sets of jumper pins inside but the
manual only refers to the set that allocates the ID's.

|Two general hints:

|- My database says you are using HDDRIVER 8.0. 8.1 may be a better
|choice for CF/SD cards since it contains changes that were relevant for
|certain CF adapters. I suggest that you try the demo version.

I'm up to version 8.16. I got an upgrade last year from Atari Workshop.

|- Like with any other device SD and CF cards must contain a valid
|Atari-compatible partition table. In other words, one must partition
|them just like a hard disk drive. Otherwise TOS will not recognize them.
|Did you partition your cards before trying to access data on them?

Initially I tried them out of the box. CF cards worked fine like this.
The SD cards didn't respond so I tried to partition them. Each time
it comes back with the message "couldn't read root sector". I think it
was this that made me think they wouldn't work hence my comments.

|it's some format HD Driver can actually read before buying another adapter.

If I remember it was you brought my attention to this reader!

The camera is a Canon IXUS 50 and came with it's own 16Mb card. I
later bought a SanDisk 512Mb Ultra II card. Both act the same.
Unfortunately the manual for the camera is in French. I couldn't see
anything that gave information on file types.

|Same model I have. No that is not normal. It should only give 2 icons.
|Do all 3 icons seem to work? If one don't, just remove that icon.
|I actually have both dual units in one machine and I get exactly 4 icons.

I though it wasn't normal. Now I need to find out why. If you ever get to take one of the drives apart maybe you could note the position of the jumper pins inside. There are three sets one of which is for the ID's. The others are not mentioned in the manual which I traced for these drives.

I've not managed to get the first icon to respond. The others respond to slot 1 and 2 respectively. I could as you say just delete it.

|Just to make it a bit more precise: If the file systems are MSDOS-FAT or
|VFAT etc. the card can be read by MagiC or MiNT. The hard disk driver is
|not responsible for dealing with the actual partition data; it does only
|ensure that the operating system gets access to the partition meta data
|like partition IDs and start sectors. Everything else depends on the

|drivers for the file systems on these partitions.

For your information I'm running MagiC 6.2.

No they have two slots and use two consecutive SCSI ID's. For some
reason my drives seem to both want a third icon.

Hey guys. I'm having trouble with a Yamaha CDRW.

All I tried to do was swap it out with an existing (older - non working burner, but CD works fine) Plextor in my Atari setup that runs my BBS.

Its HDDriver v8.15 and ExtenDOS Pro v3.4. I set the Yamahas jumpers to the same as the Plextor, ID2, Parity, not terminated. I have a termination block on the end of the SCSI chain.

I tried this Yamaha on my CT60 Falcon and it works fine there, including burning CDs.

So what happens when I turn it on, hooked up to my Mega 4ST and the ICD Link2 is I get this:

HDDriver v8.15
copyright notice

Seagate HD specs
Yamaha CDRW specs

then 3 bombs. Always 3 bombs. I thought maybe ExtenDOS was doing something strange so I disabled it in the auto folder but it still does it.

Anyone have any thoughts, suggestions? Remember, this is a drive that works fine in my Falcon, and going into a setup that works fine with a Plextor CD.

Thanks much! :-)

|You referenced PCD-25BH, this is what I have exactly.
|The 3 slot units are part number PCD-47.
|The other set of jumpers are for a firmware update according to my manual.
|I recommend not messing with these, unless you know fully what you are
|doing. ;-)))

Yes you are correct.

I got my drives off eBay and they came without leads or a manual. I did find a manual on line which is for both PCD-25 & 47. It only gave basic information and nothing about these jumpers. I though they may

use a standard PCB for both models and differentiated by a jumper
setting. I'll leave these well alone and just put up the extra icon.

Okay, I can confirm that HDDriver and this drive apparently do not get
along on my Mega ST4.

I disabled everything in my AUTO folder, disabled all CPXs and ACCs, and
HDDriver 3 bombs right after recognizing the drive. :-(

I've got an older version of HDDriver, v7.61, so I tried it - it doesn't
crash, but you can't get anything to work either.

I tried both versions by booting from the original HDDriver floppy disks
as well. Again, v8.15 3 bombs right after it recognizes the drive, and
v7.61 gives some weird stuff on screen then exits out to a desktop that
only has the A/B icons on it, no C icon for the HD.

Its so odd because this drive works with HDDriver on my CT60 Falcon.

I'll admit, I'm stumped right now.

In case it helps, here is my setup:

```
Atari Mega ST4 (TOS 1.4/Adspeed)
             |
ICD The Link 2
             |
Syquest EZ135 drive SCSI
             |
Seagate 4 gig hard drive SCSI (external case)
             |
Plextor CDR SCSI (same external case)
             |
Termination block on back of same case (ends SCSI chain).
```

Keep in mind this setup works great. When I swap the Plextor out for the Yamaha, thats when the problems begin. But the Yamaha works great on my CT60 Falcon with both HDDriver and ExtenDOS Pro.

Thanks.

```

This is strange. Anyway, since Lonny has it working with the same
hardware I assume that the two of you will find out what's wrong by
comparing your hardware and software settings.

SCSI parity is not managed by ACSI-SCSI adaptors as I well remenber even for ICD !

Remove the parity check on SCSI drives !

Hmm, I can try that - but I've always used SCSI on all my STs with Parity *on*.

Keep in mind, the existing setup with a Plextor drive uses Parity on. So does my Falcon setup. Further, that same Yamaha drive with Parity on worked with my Falcon setup. I can even pull the CDR from my Falcon, plug it into the Mega ST setup and other than changing termination, it works fine.

I'm sure its just some odd little thing somewhere. Just don't know what.

I even went so far as to try this; I took my Mega ST - going to the ICD Link2 - then straight to the Yamaha drive with nothing else. I booted up from the original HDDriver v8.15 floppy. Guess what? Just as soon as it recognizes the Yahama drive, 3 bombs.

I will try it with parity off though, and report back.

Thanks for the reply Rodolphe.

Ok so I have a 520ST and a Mega ST2. Some guy gave these to me years ago. Included was a hard drive for the ST but no cables or interface. I want to hook this HD up. It isn't an Atari made HD. What do you guys recommend? What is my best option? The ICD adSCSI or whatever it's called? Also, should I upgrade my OS? Just getting into all this as i've done strictly 8bits this whole time. I just have these ST's and figure I should do something with them. TIA.

Thomas

This just mean that ICD link is managing the parity ..
Was not possible on some other ACSI/SCSI interface like the one from atari
inside the MEGA STE.

did you try writing in hddriver.sys to bypass cdr drive?
(I think with hdutils.app)

|> basic information and nothing about these jumpers. I though they may
|> use a standard PCB for both models and differentiated by a jumper
|> setting. I'll leave these well alone and just put up the extra icon.

|I found the PCD-25 & 47 pdf as well, it's a bit generic. But I found one
|just for the PCD-25 model.

|Here are the pdf's, let me know when you got them, because I need to remove
|them. Limited space on my ISP account. ;-))

|http://www.bright.net/~gfabasic/pcd25.pdf
|http://www.bright.net/~gfabasic/camera.pdf

Thanks for that. I've successfully dowloaded them both and got them
to display in Porthos OK.

I've had a quick peek and I can see what it said about the second set
of jumpers. However I found a third set on the other side of the PCB.
I'll print out the manual and take my second drive appart at the
weekend and see if there are any clues. I'll take pictures this time!

I was in rather late this evening so I'll reply to your other message
tomorrow.

Here is something I would like to know, When the Battery goes bad or
completely
out, One can still use the computer right?

- - - - -
Right. You just need to set the clock at startup.

That said, has anyone been able to contact Alex at ATY computers lately? I sent him an email, but he didn't respond. I solder a bit, but would prefer if more talented hands changed my backup Falcon's dead battery. Rodolphe did the job for my CT60'd Falcon, but shipping to France is a bit costly.

Galen

Yes, thanks.The second one is Ballerburg.

The first one look like Silkworm, only graphic is monochromatic. IRC it
could only be played on monochrome. monitor

What I do now is a link between the TT and Mega STE:
- the TT captures the images with Vidi ST 12
- the Mega STE captures the sound with the ST Replay (only in RAM!)
- a seriel link to synchronize everything.

As I have upgraded the TT Ram, now I can take a lot of frames on the TT, so I would like to take loger sounds on the Mega STE...

Guillaume.

I have that game Ballerburg. It runs well on my Hades, so that means it was
coded well.

Yes, the computer continued to operate normally, booting up, everything.

The only reason I noticed it at all was I'm helping beta test for Roger
Burrows of Anodyne Software right now, and the beta releases are "timed".
My system clock date is defaulting to 1971? (where does that date come
from???), and the beta software won't run with that date. So I can open up
Xcontrol, set the date to current, and the software then runs.

Now I've got another question. Rodolphe and Galen here, both mention just
setting the clock during bootup or while its on and it stays set until the
next time you powerup. Well, I can set the clock, and literally without
powering off or resetting, I have to set the clock again in just a few
minutes. This sounds like something else.

Any ideas? I believe Rodolphe mentioned a bad CPX or something...

>Also is there a source of info re the fitting of TOS 2.06 2 ROM set into a
>STFM with 6 ROM chips?

It is a bit complicated- TOS 2.06 is 256KB in size and can not be simply put instead of earlier TOS-es that were 192KB in size: there is not anough address spaces at locations to which these chip socket are wired (TOS 2.06 uses a different starting address). A usual solution is to install (above the CPU) a small additional card with an address decoder and two EPROMs for the new TOS. A bonus is that this can be made switchable, i.e. you can select either the old or the new TOS.

There is a possibility to put the EPROMs into the existing sockets, but an address decoder must be installed in all cases, and some additional wiring must be connected. The decoder can be made from about 2-3 standard TTL LS chips or some programmable logic.

Instructions can be found on the net.

Hello. My floppy drive is broken, so I can't boot up the Megafile HD. Could I get around this by buying an external floppy drive and booting from it?

Also will the Megafile HD work with a 520ST, in case I need to replace the 1040.

Thanks for any help. I appreciate it.

Larry

The battery is inside the NVRAM chip.

Replacing the NVRAM chip requires soldering skills (natch), but apparently a repair can be made by carefully removing the top of the NVRAM chip, removing the original battery found within, and bringing out the leads to an external CR3032 button cell/holder.

At your own risk of course, but this might be an easier repair to make than taking the motherboard out to desolder the old NVRAM etc.

This means that you are not booting from the HD already?

I can't remember whether the ST's boot sequence checks both A and B for a bootable disk. Anyway, once you have a working external drive, you can put your megafile driver disk in the external drive, wait for the desktop to appear, and then run the installation program to make your drive bootable.

> Also will the Megafile HD work with a 520ST, in case I need to replace the
> 1040.

Yes, but you won't need to replace the whole computer, it's almost guaranteed that only the floppy has failed. Can you clarify whether you have 520ST, 520STF, 520STFM, or 520STe? They are virtually the same except the F has an internal rather than external floppy drive (which you could remove and place in your 1040), the FM has internal floppy and modulator (to hook up to your TV) and the 'e' has both, but has redesigned internals.

Do a google search. You can usually get a PC floppy to fit with a little
tweaking of the case and the drive.

Ah yes, I remember these now. There is also a modification one can do
to the motherboard, I did it about 15 years ago to my STe, which was to
cut the two pins of the soundchip that control the drive a/b select and
wire them to a toggle switch, IIRC!

> Do a google search. You can usually get a PC floppy to fit with a little
> tweaking of the case and the drive.

Yes, physically, but not logically. You have to change the DS jumper on
the drive because PC floppy drives are preset to drive B, which is then
reverted to drive A with the twist in the PC's floppy cable. The ST's
cable is straight through, so the drive needs to be set to drive A.
Most modern floppy drives dont have this jumper anymore, but I recently
modded a couple of Sony MPF920's which do have a solder link. I assume
that these mods are above the abilities of the OP though...

Coda.

> > I have that game Ballerburg. It runs well on my Hades, so that means it was coded well.
>
> Or that it has low demands as game is simple.. Big portion of those BAD codes were due to things which was needed to squeeze more power/colors etc from ST...

Well, yes and no.

Most games from the early days of the ST failed to be compatible with anything simply because people were beeing dumb:
- assuming all machines have 512k of ram, and puting arbitrarily the adress of screen in some area that will get trashed.
- reading directly some undocumented system values in order to detect the position of the mouse or joysticks, that of course will have changed/disapear on the next revision of the tos
- using shadow registers of the ym
- writing read/values in non mapped adresses

etc
etc

If you put aside things that are obviously working only on the 8mhz-cache less-ST range of machines, like sync-scrolling/overscan, there are very few cases of code optimisation that would fail on other machines.

So that a game runs to fast or to slow is ok, but crashing is generaly due to "assumption based" coding practices.

Dbug

Hello

Maybe some of you who also use Dayna SCSI/Ethernet Interface and got some experiences can help me to setup my TT.

My situation is like this. TT is connected to LAN which is connected to Internet via ROUTER (10.0.0.2), subnet mask is 255.0.0.0.

I use latest software (STING 1.26 with TCP 1.40 and SCSI/Link 0.71)
At startup STING properly communicates that SCSI/Ethernet is connected.

Don�t know what im doing wrong but I cant get TT to be visible even in LAN nor reach Ethernet.

So anybody who can tell something, how properly ROUTE.TAB should looks?

Pawel Kaznowski

(sorry for my shitty english, I hope youll understand what im writing about :)

I don't have my Atari to hand, but i think something like this. I just can't remeber if it should be Ethernet ot EtherScsi

```
10.0.0.0     255.0.0.0           EtherNet        0.0.0.0
0.0.0.0       0.0.0.0               EtherNet      10.0.0.2
```

Sure, thats why i said most.. Esp in early ST days there were a lot of assumption based coding... I did that as well ;)))

Hello,

Some people told me Doom was very slow on CT60 compared to the CT2. The reason is that Doom (and Heretic and Hexen) use divsl and mulsl instructions for 32x32 multiply and 64:32 division. And these operations are emulated on 060.

So I took FPU routines present in Amiga Doom versions, and now, it runs 2x faster (on 060 machines).

The new version if available on my website.

Coda and David Wade

The 520 is a 520ST, so it doesn't have an internal floppy drive. So I guess I'll buy it, just for the external FD. It sounds like I should stay away from PC drives because of the complexity.

Jo

YES! It is faster now, even on not Boosted Bus!

Thanks Patrice.

With the 520ST the external drive is drive A (just in case you didnt know). You could plug this into your 1040, it will become drive B, or you can take it out of its case and use it to replace the dead drive in the 1040. One question though, is the external drive an SF314 or SF354? The SF354 is only single sided...

Coda.

Tested it now, and I must say this is the most stable pm-doom release
in quite a while.
The only remaining glitch I can notice, is that the sound is
occasionally slightly distorted when several samples are playing
simultanously.

Keep up the good work :)

Regards,

/Joakim

Hello,

I have bought a NOVA graphic card (ET 4000+VME adaptator) but without the drivers. I have used the drivers from another NOVA I already have.

But, nothing works! The desktop appears but you can see 3 or 4 times the image being repeated in the width and using half of the height.

I changed the monitor: nothing (black) on the other.

Could it be a problem with the drivers?
Has anyone them?

Guillaume.

What version drivers do you have? Not all Nova cards are ET4000's, mine
is in fact an ATI. Maybe this is the problem. IIRC when you do the
install it asks you which type of card you have. Did you just copy the
```

installation from your AUTO folder?

Some Nova's are in fact ET4000, a fact I didn't know until recently. And
yes the ET4000 drivers likely won't work with the ATI card or vice versa
;) Additionally the Nova needs separate GAL's depending on whether it's
installed into MSTe or TT and as well depending on the VRAM of the card.
(Though the higher VRAM card will probably work with less vram addressable).

Thanks,
Mark

My Nova card (well actually the VME to ISA bridge thingy with the GAL
on it), has a jumper saying MSTE/TT. I didn't try this card in my MSTE
before I sold it though...

> Any ideas? I believe Rodolphe mentioned a bad CPX or something...

Okay, I've been playing around with my Falcon (isn't that what they are for? <grin>), and found out something else interesting regarding the battery/clock situation.

I boot up, Xcontrol shows a date of "15/31/07" which all software reads as "1971".

I can set the date to current, leave the machine, come back, even hours later, and the date is still correct. Until I reboot. Then its "15/31/07" again.

This seems to me to be consistent with a battery thats dead.

Now the strange part. With it booted up, Xcontrol set to the current date, I can run *any* program, exit the program, and the Xcontrol date is set back to "15/31/07".

Is this normal behavior for a dead Falcon battery? I'm just trying to make sure that I don't have any other problems.

I did as Rodolphe suggested, I setup a clean boot with only Xcontrol enabled, no ACCs or other CPXs at all, and it still exhibits this same behavior.

Thanks everyone.

Oh yeah..  So the GAL change is only to from Nova to SuperNova or
something like that.  Guess it should work then.

Thanks,
Mark

That's exactly mine!
I put the jumper in the MSTE position, the chip is a ET4000.

Can somebody send me the drivers for that?

Guillaume.

Can any one tell me if it is possible to run Cubase 3.01 with dongle on a TT. (I have seen cracked versions running) 3.01 with dongle runs fine on a MEGA ST but when launching on my TT it complains 'no key goodbye'. So I'm thinking there could be a cartridge port problem with the TT or else its the wrong dongle? I have tried cleaning the cartridge port contacts with no succes. I have looked on the www and old news group postings but have not found a definitive answer for this.

Thanks in advance.

Hi, <???>!

a> So I'm thinking there could be a cartridge port problem with the TT or
a> else its the wrong dongle? I have tried cleaning the cartridge port
a> contacts with no succes.

This won't help you, but I'd suspect the TT's higher system bus clock
speed to cause problems with the dongle. Maybe the dongle has been
designed with timings suitable only for 8 MHz system clock.

I know about ROM-Port-cartridges with that kind of trouble if plugged in
Falcons.

I wish you that I'm wrong with my dongle-clockspeed-suspection!

Regards,

Alexander

Well, I also have a ISA card with ATI chip.
Can you please send me the drivers you have? My ET 4000 may be bad working.

Thanks for your help.

Guillaume.

well the good old days are past .
hacked versions are everywhere,kids in high school are"poppipng the top
up"and finding they can crack old
software.on all this unsupported out of date ,loot
its jerry rigged !!!....but works fine !!!, my advice is, unless you're a
serious ,money grabbing , 2006 ,techno producer,marketing ,business
proffessional,music industry pirate. don't worry and use the hacked copy.

oh and ps ....last i saw there are two versions...
..one for the tt and
one for mega ,stf ,ste!!!!

ebay seems like a good place or maybe that guy from england(????barry at
keychange???)

any how have fun and maybe even that nasty version called cubase audio
falcon will work for ???i 'm un certain.

charles

Yeah, and old PC. You have to remove the twist between the second and third connectors though or you can just cut the twisted bit off after the second connector.

It will if you hold down the ALT key (IIRC) after you start it. This will disable the audio engine.

wow!!!!!!!!!!!!!!!!!!!!honest advice ,i'll take that open hearted-lly..
awesome.!!!

now if i could only use a program that allows me to activate all 6 versions
at once . i would be beat master.
imagine all 6 cubase running multiplly at the same time!!
manned by one controller!!!! all externally sync'ed and on the same
computer....
lets see.....hhmmmm??...version 1 controlling the cubase score version,
version 2 sync'ed from version one controlling phrase synth in version three
.audio falcon recording output with the tt as the master..HA! just kidding
this is not possible,but for those of you who "wadlled through this
crap".try running multiple versions of steem on your xp and sending midi to
each running model of steem ..
i'm talking real time recordings of constant malipulations.
steem1 to steem 2 to steem 3....etc,etc,etc. this is no lie!!

works for me .
charles copp
fun

mugorj@gmail.com wrote:
> So i would like to know what's the best, easier, idiot proof way to create these disks.

There is MSA (Magic Shadow Archiver?) on the Atari, as well as ST2DISK. Both might work for you, but I'm not sure if they require a Hard Disk or not. Then there's the problem of getting them from CD to your ST...

> I tried some programs on the PC side, like the Makedisk, but they doesn't work well on the ST. They refuse to boot. And when i read them from the GEM desk, read errors are reported.

Not sure why this happens, unless you are using the wrong disk type. PC formatted disks (as long as they are the same type as your ST floppy drive - no 1.44mb disks) should be readable on the Atari, but not necessarily the other way around.

> So i would like to know how can i do this from the ST side. Can i use a null modem cable to access the disk images directly on my PC, and then create them on the ST drive ?
> Is it possible to create a RAMDISK on the ST, without any extra software, so i can put some images there, and then create the disks ?

You can download freeware RAMDISK programs on various Atari FTP sites. This might work well for you, if you need it. Otherwise, make sure you have 720k disks (not 1.44mb HD), and either use MAKEDISK on the PC on them, if it will work, or transfer them on the same floppies to the ST and use ST2DISK or MSA. You can also use null-modem transfer, I believe, but I'm not sure how to do this, as I've never needed it.

Hope this helps you!

I believe its the Ghostlink software that you need for the null-modem transfer, but like Mike, I've never actually used it either.

Hello everyone,

I have 200 megs of important atari data files stored on a SCSI Maxtor hard drive. I have a Mega ST 4 with Tos 1.4. I can plug my drive directly into my PC and using Gemxplore I can see only the 1st partition. I've downloaded Parcp and couldn't get it working. Tried Atari to PC using Nullmodem 19200 baud (This is way too slow). I now have ARanyM. Unfortunately I'm not sure how to set it up using my SCSI drive. I have 7 partitions. The drive when connected to my ST uses an ICD 'The link 2" adapter along with the ICD software. I'm also running neodesk and warp9. Could someone please help me out with this. Thank you.

RJ

Hi
    Have you tried setting up Gemulator to read your scsi drive on the pc.
The documents indicate that you should be able to do this ie.: read atari
scsi
drives from the emulated atari desktop and then copy your files directly
on to your PCs hard disc.

            Maurice

Recently the ftp-server underwent some changes. For the moment it seems impossible for anonymous users to make uploads to the incoming dir. Karl Samyn AKA saka negotiates with the new net adminstrator to change this. I hope it will soon be possible to make uploads to the incoming dir.

In the mean while you can always send the uploads directly to me.

Just a thought, but if you can see the first partition using Gemxplore and can copy the
files from that partition over to the PC, then do that and then delete the files you copied or
move them to a larger partition. Then start on another partition and move those files to the first
partition with TOS, then copy them to the PC and so on.

This will require you to move the drive between systems, until you get all the files copied.
And may take up more time than you would like, but would probably work if there isn't
another way that you can find.

If you had a CDR for the Atari and the proper software, then all you would need to do
is make a CD of the files.

If you still use the Atari, then get the latest CD writing software and a compatible CDR/CDRW
drive. Then you can make all the backups you want and easily transfer to a PC.

Best of Luck,
phantomm@bellsouth.net

Hello guys,

Thank you all very much for all your help.

I think the Ghostlink is what i was looking for to transfer the image files to the Atari.

As i have 4MB of memory, i think that creating a Ramdisk i can copy some imagefiles there, and then use the tools you guys suggested to create the real disks from the imagefiles.

I can imagine how boring will be this task, but it's the only option i can think of right now.

I remember reading someqhere on the Internet, when i was looking for some info on Ghostlink, that you can read files located on the PC harddrive, as if they where on the ST, even if you cannot execute .prg files.

If this is true it's much easier to create the real disks this way, i think. Hope that the Ghostlink transfer rates aren't too much slow.

This weekend I'll try to create some disks, and then I'll report back to you guys what i can achieve.

Thanks again for your invaluable help.

Regards,
Marcelo.

Thank you Maurice. I tried Gemulator and could not use the program to access my SCSI drive. There is a program they make called Gemxplore which allowed me to access the 1st partition of my drive. I copied those files over. I have to select one file at a time only. Unfortunately I have 6 other partitions or logical drives to copy but Gemxplore doesn't recognize any of them. Even if it coul, I have thousands of files. Selecting one at a time isn't feasable.

Thanks for your reply

R.Johnson

Thanks for your reply. I thought about this and started it. Then I realized the 1st partition is so small in comparison to the other partitions. The remaining 6 partitions are 32 megs each.   My main partition is only a few megs. Even so, I can only select one file at a time. I have thousands of files to copy. This would take way too long to do. There must be a quicker way. I used to have a SCSI cd burner that I paid $700.00 for. Then it cacked out on me eventually. I would love to have this now!!!

Thanks again for your reply

R.Johnson

Aside from Ghostlink (which requires you to make a cable), I think your best bet is either to figure out how to use Aranym (Linux can read ST formats), or to use nullmodem. Although it's slow, zmodem would enable you to transfer 200MB in about 30 hours -- just run it overnight a few nights. If you know an Atarian with a SCSI CDR, you might also use that.

Since my CTCM is heading back for repairs (pulled too hard), I need to get an oscillator. The only 66MHZ I can find are the full sized (14 pin) versions. My CT60 originally came with a half sized (8 pin) version. Does anyone happen to know if the CT60 oscillator pinout allows for the full sized version?

Thanks for your reply.

I tried Aranym. I can't figure out how to access the SCSI drive with it. The documentation included only shows how to set up a SCSI CD rom drive. I used the nullmodem @ 19200 but the mail problem with that was I could only select 10 files at a time to batch download!!! Other wise I would just select a large group of files and leave the systems on overnight. There's got to be a better way. If I could get a hold of HDDRIVER I believe I could make the AranyM work. But I'm not going to spend $100.00 on something that a)I'm going to use only once and b)might not work.

Thanks again

R.Johnson

Try PARCP between your PC and Atari instead. This involves a slight modification to a 25 pin D plug-to plug cable, swapping two wires over at one end. The speed is much higher than null modem, but does require that your PC has a printer port.

> If I could get a hold of HDDRIVER

You can download a demo version from Uwe Seimet's web site.

Galen's right. You need to use Aranym, but I think you can only access atari partitions directly on a Linux PC. If you have temporary access to a Linux PC with a CD burner in it, you can use 'dd' to dump the partitions to files (7 partitions become 7 image files), then burn the image files to CD so you can get them onto your PC. Then its just a matter of editing the aranym config to map the image file(s) to logical partitions. Also, you will need to make a folder on your PC called HOSTDRIVE or whatever and edit the aranym config so that it can see this as a virtual atari hard disk. Once aranym reboots you can then access the files on your partitions, and then copy them into your virtual HOSTDRIVE so you can get to them as normal through windows. If you read the aranym howto you will understand (hopefully) what I have just written.

Best of luck, post here or email me if you need any further help.

Coda.

Yep, there is a 14 pin DIL socket on the CT60, which can take either
size oscillator. If you have a close look at the circuit board you will
see the traces connecting the relevant pins together.

Coda.

I was able to finish VI. It was a little slow, but it still was fun. Too bad none of the others (VII - X) was never done for the Atari. I did buy them for the PC, but have not as yet played them. Guess I had too much fun on my Atari. I played 1-3 on the Atari 8-bit and 4-6 on my ST.

4 is my favorite. It played very smoothly on my ST and reminded me of my experiences with 1-3 on my 8-bit.

You can try the demo version, which may help you to decide whether it
would work.
HDDRIVER is not $100, by the way, but rather about $70. Whether this is
too much for something one would not need often also depends on how much
time one would have to spend without it.

Hi,

It looks like if <http://www.atari.org/> server is down.

Is that the same for everybody ?

Can we have news from them ?

Best regards,

I was thinking about that as well. I would like to exhaust the possibilites first of utilizing the hardware I have right now.

Thanks for your reply.

I might consider this option, however I have no idea how the program works or more importantly how can it work for me? I need to transfer the contents of my 213 meg External SCSI hard drive to my PC as quickly and as painlessly as possible. I have 8 partitions that were made with my ICD Link 2 and ICD software version 6.5.5. The 1st partition is about 4 megs and the other's are equally 29.5 or so megs each. I'm using an adaptec 2940 SCSI card on my PC. I can boot with either Win98 or XP Professional. Can I use HDDRIVER it with Aranym and is it necessary? How can I use the demo version to see if this will work for me when there's no english documentation specific to my situation. If you can offer any help I would appreciate it.

Thanks for your reply

R.Johnson

Thank you for your reply. What you're saying sounds excellent. Unfotunately I don't know how to use Linux. Could you please walk me through this process? I read that you could destroy the partition table using dd if you're not extrememly careful. I would really appreciate your help bigtime. And I do have a burner on my PC. Also what kind of driver is needed to run the burner on my PC if it's being accessed through the ST and what software would be needed?

Thanks again.

```

I am not completely sure about this, but isn't his partitions small enough that
DOS should be able to see them?

I thought that as long as the Hard Drive was setup with small partitions, that
they were compatible with DOS. I know that this is how it is when using a
PC hardware board on an Atari.

I don't know anything about Gemxplore, but it does see the first partition
which is about 4 megs.

I'd like to know why the other partitions are not being seen since they
are under 30megs?

Maybe it has something to do with the software that formatted or setup the
drive?

I was thinking that there maybe someway he could access the drive on the
PC using DOS.

Ray, Do you happen to have another SCSI drive that you can use on
the Atari ?

Thank you for your reply,

I'm not sure exactly about this as well. Maybe someone could expand on your idea. I don't have another SCSI drive for the ST. Why do you ask? Is that to test out what you are talking about?

Thanks.

R.Johnson

Actually, its nice to see such appreciation in the younger generations.

Also seems to me that he's got more of a life than you... :-)

Don't have anyone at all near you that you could borrow a SCSI burner
from? Using ExtenDOS and a burner you could backup your 213 meg HD in one
go. Then read it all on your PC.

```

Recently the ftp-server underwent some changes. For the moment it
seems impossible for anonymous users to make uploads to the incoming
dir. Karl Samyn AKA saka negotiates with the new net adminstrator to
change this. I hope it will soon be possible to make uploads to the
incoming dir.

In the mean while you can always send the uploads directly to me.

I think the Aranym docs tell you how to do it. I dont have time right
now, but in the meantime have a dig around, and look at the man pages
about 'dd'. The basic structure is:

dd if=/dev/<partitionx> of=/<directory>/parition_image.bin

you may need the 'bs' option to specify blocksize. Again look at the
Aranym and 'dd' man page.

Coda.

The best thing I could think of is using a live LINUX CD like KNOPPIX.
A KNOPPIX CD has been shipped with many computer magazines.
Perhaps you have one laying around or perhaps a friend nearby has one.

The CD installs a Linux system in your computer without writing anything
to your harddisc. It also installs a GUI desktop.
If KNOPPIX detects the ATARI partitions you can directly copy the
files on your PC HD using the Linux desktop just as you
would do on a ATARI.

It sounds good but how would I do this? I've never used ExtenDos. I can get an external burner. The guy said it has the smaller ends, not like the on my current Scsi Hard drive. So 1st I would need a large (printer style) end to a small end Scsi cable. From there, I don't know how to run this Extendos program on top of my current atari ICD controlled system.

Thanks for your reply.

Hi,

You may be interested by the following uptodate snapshots of ARAnyM.
Very latest changes on fVDI/Teradesk have been taken into account.

- The Pack_3D at <http://ebmodel3.atari.org/Pack_3D/>
that works on 3 OS/platforms including Windows, Linux and MacOSX.

It includes ARAnyM 0.9.2pre1 and

EmuTOS 0.8.1 version (also works with TOS4.04)
HDDriver Demo
FreeMiNT from Jan 29 2006

MyAES 0.80 beta from Jan 18 2006 (only available in this pack)
TERADESK 3.80
EB MODEL3 3.61d version (only available in this pack)
EUREKA 2.12 beta from Feb 06 2006 (only available in this pack)
KRONOS 1.71a
QED 5.0.5
POV 3.1g
INSHAPE3 Demo
ZVIEW beta 7
MESA_GL 0.93 version (derived from Mesa3D 2.6)
CAB 1.5
HYP_VIEW 0.35.2e version

ready to start with.

- The minimum pack at <http://eureka.atari.org/pack_aranym.zip>
that is built for Linux.

- The minimum pack at <http://eureka.atari.org/MacAranym.zip>
that is built for MacOSX.

Enjoy :)

> slow.

You probably read one of my posts ;-)
I've been using Ghostlink for years and, except a few failures from time
to time, it worked great.
The transfer speed is rather slow, but you can access your PC drive
directly from any software. So you can ask your Atari software to write
back a file that you will select on the PC drive, then go away and have
a drink: the ST will transfer the file and write it, you don't have to
be there (of course d'ont forget to insert a blank disk ;-)

Later I moved to SCSI Link with HDDriver and a Iomega Jaz drive, much
easier and faster... But not really cheap!

Good luck
Simon

PS: what really saddens me is that the Ghostlink authors seemed to want
to use the parallel port, which would have been much faster... But no
news since (that must have been 12 years ago ;-)

R.Johnson wrote:
> I have 200 megs of important atari data files stored on a SCSI Maxtor hard drive. I have a Mega ST 4 with Tos 1.4. I can plug my drive directly into my PC and using Gemxplore I can see only the 1st partition. I've downloaded Parcp and couldn't get it working. Tried Atari to PC using Nullmodem 19200 baud (This is way too slow). I now have ARanyM. Unfortunately I'm not sure how to set it up using my SCSI drive. I have 7 partitions. The drive when connected to my ST uses an ICD 'The link 2" adapter along with the ICD software. I'm also running neodesk and warp9. Could someone please help me out with this. Thank you.

What I say may sound stupid to you but...
If you only want to access your hard drive and make a backup of it once for all, Ghostlink and its 19200 bauds could be the solution.
Why ?
Because you can put all your files in a single folder on the ST side, then transfer this folder (so your complete HD or partition) directly to the PC.

Then go to bed, at work, the transfer would be something like 1 day long for 200MB, but you don't have to be there. Just consider how long it will require you to try another solution. Assuming you don't need your ST and PC for 1 or 1.5 day, that's what I'd do.

Of course other solutions like Aranym seem much better - but I don't know them. Try to have a look at the French newsgroups, I think someone made an easy-to-use Aranym version for Windows - not sure about the HD access though.

Cheers
Simon

Thank you to all of you who replied. I managed to finally and painlessly copy all of my 3000 + files over to my PC from my SCSI atari drive. I ran the knoppix ISO Live CD (http://knopper.net/knoppix). It detected all of my SCSI partitions from the Atari. At first I had trouble because it wouldn't let me write from one drive to another. So I created a directory to copy the files into underneath the 'Home' directory. Then I burned those files with 'K3'. I couldn't believe how easy it was to do. What a nice graphical evironment it is. I thought that it would be like DOS with the command prompt but it was like a better Windows.

Thanks again everyone. I really appreciate your help.

That was a great idea of Henk's to use a knoppix live CD. It never
occured to me that a live cd distro would have atari filesystem support
available from the 'get-go'. I'm going to have to check this one out
myself. I think I may still have a peecee around here somewhere :-)

Every other GUI in the world is a better windows! ;-)

Well done.

Coda.

Very interesting indeed!   This should be noted in the ST FAQ as this
problem comes up
from time to time.

I know I have a few of these CDs around myself.

Have a question regarding using very large hard drives on Atari Computers.

AFAIK, TOS 4.04 only allows around 1 gig per partition.
Which limits total usable space of around 15 gigs more or less.

Is there any use for a 80 Gig IDE or SCSI hard drive on any Atari?
In other words, can the extra room on such a large drive be used in
any way?

Yes, by using FAT32 (MagiC or MiNT) or Linux ext2 (MiNT) partitions.
Even without FAT32 or ext2 you can use more than 14 FAT partitions with
MiNT or MagiC (MiNT up to 31, MagiC up to 25).

FreeMint is your friend. Install it and you can use all the space
available.

I think there should be a web page with how to do this so that when people like myself who wanted to transfer from ST to PC wish to do so, they can be instructed how. I must have spent about 24 hours researching the Atari links, going through emulators and websites etc., trying everything and finally I got it working. The problem with Knoppix is that by default, you cannot write to either the PC drive or the Atari drive. I believe it's because of the basic permissions set up by default to protect the beginner users from writing to the drives by mistake. So I created a temp directory under the 'Home' menu(a 400 meg ramdisk), copied the ST files there and then burned them with the burning program called Eb or E somthing. You can access it from the little 'Gear' symbol on the bottom left where the start menu button in Windows is and then it's uder something like uttilities or something like that.. It was that easy. Maybe 10 - 15 Minutes at the most!!!

Thanks again everyone. And by the way, when it was first suggested to use Knoppix I was hesitant to do so because I know nothing about Linux. So my friend also suggested it and I saw for myself at his house what it looked like. I was impressed. If you're used to Windows, Knoppix is even better!!

I am very happy to hear my idee worked so well.
Knoppix came to my mind when somebody mentioned Linux in this thread.
I didnt know whether it would work, but I knew that Knoppix originally
was designed as a 'system repair' tool.
So my second thought was that Knoppix might noy br as picky on file
system identifiers as most other PC operating systems are.

I have a SCSI card on my PC as well.
It is great to know that it is so easy to get my TT HD content on my PC.
Be it for backup, or for use with Aranym.

Have a nice day ;-)

sure, they both work...the upper left corner is the black dot corner (so, the orienttion is the same as 8 pin)...

Hi there
Just got a Falcon 030 (4mb no hard drive) and want to add some storage
and maybe a flat screen. I fancy a CF card solution as they are quite
cheap and quiet. I've an STE with an old Atari hard drive thats too
noisy. Is there anyway to connect that to the Falcon ? I've also got an
STE with an internal IDE drive, would that fit ?
I remember seeing on eBay an adapter for using PC monitors with a
Falcon, anyone tried one of these ?
One last thing, can I add the Falcon to my PC network ?
Thanks for any advice.
Cheers
Jammer

Perhaps even better approach would be to write a BetaDOS's cluster.dos
replacement where certain file types would behave as folders simply
(.msa, .zip, ...). It should be quite easy to write using avf.sf.net
virtual filesystem implementation and aranym.sf.net hostfs filesystem
implementation (when you port its core to m68k - should not be
difficult). But it would be quite slow I can imagine.

This is not even easily possible under MiNT .xfs as the filesystems
there are not stackable (in the sense that you could access a file that
is on the ext2 inside a .zip packed .msa). At least if I am not
mistaken.

with regards

STanda

Hi!

I just wanted to let you all know that I still have 2 more cards (and perhaps even some more from this March - depending on the demand) of a 16MB Falcon ST-RAM extension cards.

I am only a distributor, Petr Svoboda's site (the author) is:
http://www.volny.cz/boban07/RAM_kartice/

The US price is $52 USD (includes the card, 16MB SIMM), shipping is free.

Let me know if you are interested.

Best Regards

STanda

Even for a ramdisk, you'll need a ramdisk driver, that must be kept functionning while the game/demo is running. And there is a big probability it will get overwritten the same way as an hard disk driver.

Only cleanly written software will work with such a setup, or games/demos that have been patched to use OS functions for disk and memory access.

Yep, only the root 'U:\' drive allows mount points under MiNT. And this is why filesystems are not mountable/mounted anywhere else.

And there is also the fact that a file opened by a device driver has its handle assigned to the process that opened that device, not the kernel. I tried a while ago to write a loop device for MiNT, and was stuck there: a 'mount' program tells a /dev/loop device to open a file, but when the 'mount' program ends, the opened file is closed, and thus can not be used to mount a filesystem on it.

Hi Alex. Just wanted to say that your website is nice!

Anyone ever get Amberstar working on a Falcon? Awesome RPG.

Thanks.

These cards are TOP NOTCH btw. Work fine with boosted motherboards on CT60.

Thanks,
Mark

I have revised the listing as errors had crept in from another sale I was making at the same time.

I'll post anywhere in Europe.

Thanks for the suggestions

Neil :-)

To everyone,
  I have used this same card in a stock Falcon that Mark D boosted up in several
areas. CPU 20Mhz., DSP 50Mhz., BUS 20Mhz., Videl 40Mhz., 68882 FPU boosted to 64Mhz.
Mark D can vouch for this, the card that the computer was sent to him with had major
artifacts and would not boot properly. After changing out the STRam card with this
one it worked GREAT!!!!! I also tested this on my CT60 boosted to 25 mhz.!!!!

Works
Great there. Buy with confidence that it will work great for you.

Thanks,

--
Carey Christenson

One random caller each month will win a free subscription to ST Magazine.

You were apparently more "random" than the others this month. :-)

Hi,

> What about redirecting the floppy to a ramdisk? I.e. load the file from
> the hard drive, into memory then warm boot the ST? Obviously won't work
> without a fair bit of ram, and multi disk games would be a problem to.
> Especially considering most of the PP stuff etc, is packed all ready.

I have a nice book about drives on Atari ST (Scheibenkleister). This book contains a part about a ram disk which was alive after reset and dont need to boot a driver after reset. And it is possible to boot from this ramdisk. It was the "Luftschloss" from Claus Brod and Anton Stepper.

Maybe it is possible to use this ideas to load the disk image and use it after reset to boot from.

Best regards
Michael

Hi,

> Yeah, should be quite simple to do.

Yes, i dont expect much problems. I need only a BOS driver with read
functions. And then i have the full functionality of the desktop for access to
the image. This is the reason why my simple program for access directly the
image is quite simple.

> And don't forget a program/accessory to change the "mounted" floppy image.

I dont forget it, it was stil on to ToDO list.

Best regards
Michael

Here is a short intro and overview to Reanimator II, this months prize game on The DarkForce! BBS. You'll have to play often to win! :-)

Reanimator

... how did you get here? You can't remember for sure. All you can remember are the sounds... the music of the spheres. You sense that you were cast into this darkness by powerful hands... hands that control your destiny... of someone with a power that you cannot imagine.

You feel a strange surge within you, and you know you have changed somehow... and you suddenly notice the book in your hands. You open it to find spells of which you know nothing... conjurations of the spirits... and the power to reanimate!

Then your become aware of one more thing -- you are not alone... and from the constant probings within your mind, you doubt that they are friendly.

One voice comes thru louder than the rest... it is the voice that belongs to the powerful hands... "Destroy all others!"
"By Enlil, I command thee!!"

In Reanimator,you become a Necromancer at war with other Necromancers. You must maintain a mighty army of undead soldiers in order to prevent other Necromancers from dueling (using powerful spells) against you.

At the same time, you must increase your magical energy, strength, and endurance in order to perform your varied options -- among them is the opportunity to attack other Necromancers. Other choices include the reanimation of the dead to create reinforcements, sending out zombies on search missions (who knows what they will come back with), drinking magical potions, and praying to your gods.

You will need your staff to cast those spells, so hang on tight! Other magical items in your possession are the powerstone (used for storing energy that cannot be lost as long as you are alive), and a crystal ball (used to spy on other Necromancers).

The top _surviving_ reanimator will each month be added to the Hall of Fame. Will your name be written there, Necromancer?

Good luck all! :-)

ATTENTION Atari customers. I'm buying out an Atari dealer, cleaning out his ST software. Then Atari 8 Bit & Jaguar! I've paid for 80% of ST Games/software & received 60% of ST Games/software so far! About 400 NEW Games! If this works out I'll buy out his 8 Bit and Jaguar stock! I need to make shelf room for NEW inventory and raise the capital to buy more Atari. If you would like to help save Good Ataris from oblivion, step up and buy a minimum of $100.00 of ANY Games/Software in my Classic Atari 8 Bit and/or Atari ST Catalogs and get 20% off! E-Mail or call Ben at (503)256-9974!

I actually built this computer, with the components supplied by Neil.
A lot of time was taken over it, it's one of the neatest Falcons I've
seen IMHO. The ATX power supply is actually in the case! Shame to see
you selling it.

Lyndon

Howdy,

New SMS-release. Fixed those nasty bugs and added some features.

Enjoy.

Recently got a bunch of ST Books.

Some are filled with programs in ST Basic.

Was wondering if old ST Basic programs are compatible in GFA Basic?

For what I remember there was a converter able to read ST Basic listings and output .lst files.
Was not entirely compatible, but at least it took care of line numbers and stuff.

I'm creating a new Catalog for all my NEW in the BOX/BAG Atari Games/ Software, Hardware & Books for the 8 Bit, ST & Atari Jaguar! Below is a sample. With a 79 Column Width! I'll be seperating all NEW in BOX to one Catalog named NEWINBOX.TXT Each entry will be 79 columns across and should only take one line per entry. WHAT I need to know is can your Computer and viewing software handle Text displayed in 79 Columns? Thanx! ===Ben===

Bravo Sierra Computers All New in the BOX/BAG Catalogs!

Bravo Sierra Computers 16 Bit Atari ST Computer Games/SoftWare Catalog

NIB = NEW IN BOX/BAG!

Title (Alphabetical); Maker; Description; Type (Games, etc.); Price.

1st Mail; GST software; Mail Merge for 1st Word.;..................$20.00 U.S.
Action Fighter; SEGA Arcade Hits/Mindscape; Game.;.................$20.00 U.S.
Afrika Korps; Impressions; English/French/German/Italian. Game.;...$20.00 U.S.

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

Hi,

a friend of mine likes to sell his TT. I think the machine has got 4/4 megs of ST/TT RAM.

It works inside a Tetra tower, there are two hard drives with about 345 megs of space. A Syquest 44 (or 88 meg) drive and a graphics card by Matrix (256 colours) also belong to the system.

I think there's a CD rom but my friend doesn't think so. We should have another look to the machine together... Some soft (e.g. CUISINE, ADIMENS, SIGNUM!4) will be supplied as well. The keyboard is German.

He proposes a price between 100 and 200 Euros and will give a 15 inch monitor, too.

Handicap: The buyer will have to take it over at Bonn, a small city 20 miles south of Cologne, Western Germany (geographically speaking).

Contacts welcome in French or German (both preferred, for he's
a French living in Germany) or any Latin language.

Anyone interested may contact me and I'll forward the mails to him.

Und TTsch�
ps

With the exception of maybe the 8-bitters, any Atari computer can
display 80 column text. Although, since you need a web browser to get
to your site, anyway, why not just do it in HTML? That way it'll format
itself to fit whatever size the web browser's window is.

If I'm going to do this, I need to follow follow the K.I.S.S. method or
K.eep I.t S.imple S.tupid! My Web Site is already in HTML. My On-Line
Catalogs already use HTML. As far as my Catalogs go, I maintain them in
straight ASCII text in a simple Text Editor. ST Writer Elite v.4.8!
Available for download, in the Lowest Common Denominator. Thanx! ===Ben===

For Immediate Release:
2/7/2006

Atari Video Club needs your help making a new slogan for
this years show. So we decided to make a contest out of it.
The winning slogan will be fetaured on selcted items in
our store cafepress.com The person with the winning slogan will
also win a white t-shirt that has the slogan on the back of
the shirt and our new Logo on the front.
here are the rules:
1) slogans are to be orignal and not a parody of of known slogans.
2)slogans must either include the words "Video Games","Computers" and "Family fun" or at least reference to the words.
3) theres a limit of three slogans per person
4) Contest is open to everyone!!
5) deadline for enteries in June 2nd,the winning slogan will be announced on June 13th.
E-mail your contest submitions to the e-mail address listed below
with the subject: Slogan contest.
The 2006 Video Game Summit is on August 12th, 2006 from 9am to 6pm at
the Fairfield inn and Suites (Heron point building), 645 West North Ave,
Lombard, IL 60148.
Visit the VGS website: http://avc.atari-users.net/VGS.html
For more information about Video Game Summit
contact Daniel Iacovelli at AtariVideoClub@yahoo.com

I was going to suggest something edgey like "ATARI Sux" which would
appeal to the younger generation, although when I read it had to
include "Family fun" I realised it would not be appropriate.

Perhaps "Family fun Video Games and Computers Super Happy Atari Video
Club!", with some kinda hyperactive asian guy promoting it at the
Summit..

ATARI - We Once Were Synonymous With Video Games Until We Let Nintendo
Steal It From Us.

ATARI - Because Infogrames Was a Stupid Ass Name.

Oops. Not sure that 2nd one will qualify. It's a good one though.

I concede to the brilliance of this poster's slogan and would like to
pre-order a t-shirt with either slogan. Hehe

The first ones are really tounge in cheek:

"ATARI - Your Father's Video Game System"

"Atari - Family fun from sometime between caveman and XBox"

"Atari: #4 of the Big Three Computer Companies"
(back when it was Radio Shack, Commodore, Apple and Atari)

Now for some better ones:

[VCS 2600 graphic]
Atari 2600
XX Million Happy Customers
(I'm sure someone here has the number sold)

Atari Computers
[Atari 800 graphic]
Four Players - No Waiting!

(Line art of the old ad showing a family playing a 2600)
Atari - Fun for the Whole Family!

Hi,

I have a Mega STE, and, before opening it, i'd like to know if I can plug in it the fllowing processors:

- un MC 68020 RC16B (2A70N8807)
- un MC 68881 RC16B (2B 81G QEXX8834)

Without soldering, of course....!!!

Guillaume.

No, you can't do that, even soldering would not help.

I could be wrong, but I thought Atari was #1 for a little while back in the
days before the VIC-20 and C=64.

ATTENTION Atari customers. I'm buying out an Atari dealer, cleaning out his ST software. Then Atari 8 Bit & Jaguar! I've paid for 80% of ST Games/ software & received 60% of ST Games/software so far! About 400 NEW Games! If this works out I'll buy out his 8 Bit and Jaguar stock! I need to make shelf room for NEW inventory and raise the capital to buy more Atari. If you would like to help save Good Ataris from extinction, buy ANY Games/ Software in my Classic Atari 8 Bit and/or Atari ST Catalogs and get 20% off! E-Mail or call Ben at (503)256-9974!

```
http://BensCatalogs.Atari.org            WebSite & 3 NEW Atari Catalogs!
http://www.aracnet.com/~atari/specials.htm   Details on Sales!
```

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

Hi Francois!

> Please report your comments. You're welcome.

I tried it for about 5 seconds (yes!!!) and I got a fatal crash in aranym.

What I did is this:
Scroll up and down on the teradesk window using window widgets. Could reproduce it 3 times in a row. Now that I opened my emailer, it wont happen anymore, instead I get bus errors, crashing the desktop, etc.

So whose fault is this now? Aranym? MyAES? Aranym MiNT Kernel? fvdi? libSDL? Windows XP?

Only God knows! Sorry, I dont even manage to test this. This is what I have been criticizing about aranym forever and this is exactly what prevents me from reporting bugs.

If I send in such a bug report as this one, it is too easy to say: Not our fault.

Really, it was my fastest crash ever!

And most annyoing: aranym hooks the mouse then. Hard to get it back (but possible).

Maybe I manage to run it for longer than five minutes. If I do, I will let you know about the programs and how I like those.

Cheers, Ingo =;=>

Hi Francois!

Oh, yet another thing:

I do understand you love your language (all French people do and try to
avoid any other language as much as possible ;-)) but really, such a
collection would have been much cooler and easier to use for all of us
if it was in English and not French...

And starting CAB also freezes things here. zview, eb_model and qed work
fine, though.

Cheers, Ingo =;->

Well ... I'm not responsible for the Windows version. I personally
built the Linux and MacOSX versions for the Pack_3D configuration.

I know that there's problems with the Windows version. I think that
it is related to the usage of a too old SDL library when building
the Windows ARAnyM version (SDL.DLL).

In any case there doesn't seem to have such problems with Linux or OSX.

What you can do is to report problems on <http://aranym.atari.org/> in
the users mailing list.

You know that ARAnyM hasn't reached the "1.0" number version, and that
we really need to hear feedback from users.

Thanks for giving a try to the Pack_3D configuration :)

We look forward to hear from you.

Best regards,

I know that the Pack_3D is mainly localized in French. It has a kind
of "French touch" :) But you know that most softwares that are included
in the package have the corresponding configuration for other languages.

In any case, if you don't find your mother tongue language, that is
almost available for all softwares, the RSC editor "Interface" is
present in the package, so that you can translate programs for your
personal usage. You may also contribute for the translation of

softwares, so that other ATARI users can benefit from you work :)

Did you hear of <http://atari.transaction.free.fr/> WEB site ?

> And starting CAB also freezes things here. zview, eb_model and qed work=
=20
> fine, though.

CAB freezes ARAnyM only for the Windows supported platform. It is not the case for the Linux and OSX versions that I personally maintain. The precise problem should be related in the ARAnyM's users list, so that you have answers from Windows maintainers.

Thanks for giving a try the Pack_3D configuration.

We hope to hear from you :)

No, other software work like this, but some software could possible not
like Hostfs. To see if it is you can try to copy it on C drive to see,
if it come with this or not.

> Papyrus versions 4, 5 & 7 wouldn't run.

I don't know if it work, I have test version 2, 8 and 10
2 work, and 8 and 10 can be run but not work correctly because we can't
edit anything, this a myaes trouble (or a possible bug in Papyrus, if it
can't find NAES or Magic (I have to try to put a cookie to see if it is
this soon!))

>Calamus SL96 tried to load but was
> unuseable, DAs Layout also no go.

Francois which version do you use?

>Atari Works loads, starts a new document
> but the menu options are then grayed out making them inaccessible.

Perhaps an myaes trouble, I have not this software to test.

> Harlekin III loads and appears to work.
> Any suggestions would be appreciated. I do have NVDI 5 (a legitimate
> copy) so
> I could use that if it helps things along. Also would using Tos 4.04
> improve
> compatibility with earlier programs?
> Does anyone else have experience with this?

Yes of course a lot of software access directly to video, and not like
fvdi for this, but for speed the only way is fVDI, that is it not bad at
all, and work well with a lot of applications.

>
>   regards
>   Maurice
>

If you wan't to answer me directly by mail, don't foget to remove BIDON.
from my email address, I need feedback for software test, for MyAeS that
I developp.

Olivier

Yes I know, just remove truetype folder, and it work, I have to
recompilate Aranym with other options, there is something wrong in my
compil, it work fine on linux and osx. Sorry

For Inshape III, unfortunatly there is only french version, someone
should do translation (ressource and 100 pages of doc!), but never do it
because he is dead some weeks after have the Inshape package. There no
ask for this, and work is to big, to do only for fun unfortunatly. So no
version of Inshape except in french.

The problem with TrueType fonts is related to the fact that ARAnyM
really needs the latest SDL library for freeType2 support. Do you know
that the SDL.DLL library that is present in the Pack_3D configuration is
about 10 times bigger than the current SDL.DLL 1.2.9 Win32 version ?
This is due in my understanding, to the fact that the latest versions
take much better advantage of Windows APIs.

There's no real need to add nfVDI building switch for freeType2 support.
It should work really great if you just update SDL, and build ARAnyM
again from it.

The current CVS version of ARAnyM really need an uptodate SDL version.

Best regards,

Well, then bad luck :( It is not the place to report such a bug.

Anyway, when you update SDL with CygWin, do you choose a stable version
or the current version ? Current should be preferred to stable version.

I hope it can help.

Best regards,

A cvs version, as you do for MacOS or Linux, it should be CVS version
from 10 january 2006. Without this aranym.sys couldn't run with old
```

official 0.9 version.

I have actually no time to spend for this, I have already relate this to Johan. I'm not sure to have do good options (I just add JIT option to default), if I try add opengl option Aranym crash at start.

I can't do more, for a year I'm not in the developper mailling list of Aranym, because I have no time to spend for it, because all my time is for MyAeS, and it's enough for me!

So for the moment Windows user should know, there probably bug comming with specific windows version, cab couldn't work (except remove truetype font folder) or use highwire!

Olivier

Hi!

While it is interesting circumstance it is just by pure chance. As an original author of the FreeType2 support in fVDI I can safely tell you that it cannot relate to SDL library version ARAnyM is compiled against. It does not attempt to use any NF (host OS) stuff in there. It should work the same way on any m68k box out there.

That said I should also warn you that the vector font support in fVDI is not mature enough and a lot of apps have problems with that. fVDI is open-source and so you can contribute to bug fixing and improving its compatibility.

PLEASE PEOPLE! REPORT BUGS IN OUT ARANYM MAILING LISTS! Read http://aranym.sf.net for more information.

Regards

STanda

It doesn't seem that you know how to upgrade CygWin. And that's what I
don't understand about what you're doing under Windows. It is not the
same thing at all, than under Linux or MacOSX, indeed.

What you have to do is to call "Setup.exe" that is available on :

     <http://www.cygwin.com/>

and to ask to the FTP installation GUI to upgrade the development (and
SDL) packages.

> Without this aranym.sys couldn't run with old official 0.9 version.
>=20
> I have actually no time to spend for this,

We just ask you to build a Windows executable ... No more than that ;)

> I have already relate this to=20
> Johan.

You know that it is not a bug of fVDI indeed. Otherwise it wouldn't
work under Linux and OSX. No ... The problem is related to your devel
environment.

> I'm not sure to have do good options (I just add JIT option to=20
> default),

That's fine like that. Just add JIT options, and that's fine. My
building options under Linux look like :

```
=2E/autogen.sh --enable-jit-compiler --enable-jit-fpu CFLAGS=3D"-march=3D=
i686=20
-funroll-loops -fexpensive-optimizations" CXXFLAGS=3D"-march=3Di686=20
-funroll-loops -fexpensive-optimizations"
```

You can do a similar build under CygWin. GCC should be 4.x, is it ?

> if I try add opengl option Aranym crash at start.

We ask you to build a standard package. Nothing more. No OpenGL.

> I can't do more, for a year I'm not in the developper mailling list of =
>
> Aranym, because I have no time to spend for it, because all my time is =
>
> for MyAeS, and it's enough for me!

If you're working on MyAeS, and use ARAnyM for it, it would be better
that you have a working version of ARAnyM. The current version
of ARAnyM is quite stable, as you could test under Linux. It would
be a good thing for you, first to have a correct GygWin devel
environment, to (second) build a working version of ARAnyM. You will
then be able to debug MyAeS under Windows.

And we all need a working version of ARAnyM under Windows, to insert
it in the Pack_3D configuration.

Please we need it ! And it is affordable for your devel skills :)

> So for the moment Windows user should know, there probably bug comming =
>
> with specific windows version, cab couldn't work (except remove truetyp=
e=20
> font folder) or use highwire!

Did you read all bug reports from Ingo Schmidt ? The Windows version
that you built is almost not usable. You should care about it ;)

Regards,

No, I'm not stupid, I use cygwin for long time ago, my update should
date of 2 weeks only! This is enough! It's strange like people think
when there is an update, older version can't be good for what they work
before.

So please not said me how use cygwin, I use it for first port of Aranym
on windows, authors at this time not think a version like this could
appear so fast, they not plane do it before 1 year, if I remember!

For a long time cygwin was very difficult to update for me (stop near 20
times before finish and take near 1 day for this!), now I have install
it in half an hour!

So if you are so good try to do better I have no time for this.

But it can be an fvdi bug, or aranym bug or anything else, really I
don't know how you can said this, bug are sometime so strange!

All here is developpement (emutos, aranym, fvdi, myaes) except perhaps
Mint that looks very stable.

Notice code optimisation, should not change anything in bug, and is
expected to add new bugs, I prefer default option comming with configure
notice too that --enable-jit-fpu is done by default.
>
> You can do a similar build under CygWin. GCC should be 4.x, is it ?

The default one on cygwin: 3.4.4

It work not so bad except this, because I can even launch Papyrus 10 and load vectorial fonts without trouble, but Papyrus unfortunatly not work correctly (can't edit), but this is a known trouble comming with myaes! (nothing is perfect!)

Now it's not to me to said if Windows version is conform or not to what it should, this should be do, with the official realease and not a develop version, as we use it, I suppose when Aranym team will look to do this official release, they will try to compil in most target possible to test, as they alway's do (For Windows Petr do it generally), and alway's there is specific fix, and correction bugs. If they not do it, it's because they thing it's not time for this (not finish), and because it's an hard and long work, impossible to do all month. We only use an CVS version, because there was done a very interesting work on it.

Olivier

So then, you do your best. I think that the main reason why ARAnyM
doesn't work under Windows is that CygWin is now obsolete. I recently
heard that there's a new commercial devel environment that take place

of CygWin that is much more efficient. CygWin seems to be abandoned
and not suitable for our kind of developments :(

>> and to ask to the FTP installation GUI to upgrade the development (and=

I already maintained Linux and MacOSX versions for this work. Sorry
but I can't do anything more. I have no special affinities with
Windows either :P

> But it can be an fvdi bug, or aranym bug or anything else, really I=20
> don't know how you can said this, bug are sometime so strange!

CygWin is obsolete :(

What a nonsense ! Sorry but optimizations are taking a great importance.

>> You can do a similar build under CygWin. GCC should be 4.x, is it ?

>=20

Windows is useless. There's no reward to develop in such an OS.
This is so messy ! Forget it !

I'm aware of the Papyrus problem. It's not an important thing.
It will be fixed. I'm confident :)

> Now it's not to me to said if Windows version is conform or not to what=
=20

t.

So. Please ATARI peoples, stop using Windows, and don't complain
anymore about it. We do our best, but it is so messy that no warranties
of any kind can be given on the correct usage of the Windows port !

Linux is free and available from everywhere. It's friendly :)

Stop playing with fire, and migrate to Linux. It's such a reliable
operating system !

And remember that we're all gods ;)

Best regards,

Hallo Edward S. Baiz,

>I have and use version X.

A little question: I found a problem in Papyrus X when using the options for the dialoges. Papyrus crashes and freezes my PowerBook (MacOS 8.6 with MagiCMac 6.2) when saving the changed options for the "dialog". With MacOS X and MagiCMacX Papyrus doesn`t crash, but the options "dialog" can not be calles from the menu directly. What happens, if you change the behavior of the dialogs for the buttons "OK", "Cancel" vs. "Accept", "Back" and save these changes?

Actually, the emulator was originally written by Charles MacDonald, but
I've ported and adapted it for the Atari.

I've discovered a nasty bug in the sound emulation part, which
sometimes turns off the internal IDE drive, and can probably cause all
sorts of bad things. A new version will be out soon. Sorry for this.

No why? I still use Mandriva 2005, and Aranym work fine for me, and if
I'm true by default it's gcc 3.xxx on it.

When I see all updates of cygwin, I think it's not stop dev!

Olivier

That's why I asked you if you were using "stable" or "current" versions.

> No why? I still use Mandriva 2005, and Aranym work fine for me, and if =

> I'm true by default it's gcc 3.xxx on it.

Yes, on my dual-G4, because I'm working with OSX.3.9, it is GCC 3.3.x.
And it is not an uptodate system ... I don't want to migrate to Intel :P

But on my P4, I installed Mandriva 2006 (Cooker), and it is uptodate
with GCC 4.0.2 :) We're really taking benefit from GCC 4.x on x86
archies.

> When I see all updates of cygwin, I think it's not stop dev!

I wish you were right !

For this you can try to replace cygwin1.dll by this:
http://olivier.landemarre.free.fr/cygwin1.zip

Hey gang. I've got a Freekeys replacement keyboard setup that I bought
used. 2 of the wires on the cable connection to the case plug have come
loose and need to be resoldered.

Can anyone tell me how the wiring goes on this? (which color wire to which pin? There are only 5 of them I believe. The wires are red, bluce, white, and black. It appears there are 2 blacks.

Thanks.

> these changes?

PowerMac G5 and MagiCMacX 1.2 here, and you're quite right about the "Dialog" dialog box - one has to choose another option from the cascading menu, and then get to the "Dialog" popup from there. Funnily enough, I had this working perfectly the first time I tried!

The actual choices don't seem to "stick" either, from what I can see.

Overall, I'm not too impressed by the presentation of this program
(English version). There's still some untranslated German and as for
some of the dialog box and button texts...

I think people will be more inclined to formally register interest when there's a nearly finished product as opposed to a project awaiting kick-off. We've all been through let's-do-this-today so many times and it never comes to anything.

>did you send an email to IDEPROJECT@FREE.FR ? it's the only way if you

It comes across as perhaps a little pressurising and unfriendly. People are fickle. You'll find that over 50% will simply disappear when you launch it, and you'll find the other 50% buying on impulse alone when the product is waved in front of them.

But otherwise, let's see it, make it happen. :-)

I've thought about this and for me it highly depends on cost. Can you produce the board for $25 or $100? Because it makes a difference on justification. I already have to spend 10bazillion $ on CTPCI, SuperVidel, etc because... well.. I love my falcon, but SCSI drives are dime a dozen these days and I have plenty of scsi goodness on my tt and mega ste's. And this project isn't even for TT or mega ste. Naturally there's the problem where we're probably going to run out of scsi drives that work on these old interfaces but I think we're a ways away from that. To top it all off, should I really be buying hardware for computers I haven't used enough? (My TT's and Mega STe). I wish electricity was free.

Thanks,
Mark

Hi!

Does anybody know if there=B4s a way to boot a MSA file stored on the ST
HDD directly without writting it onto a floppy?=20

Thanks!=20

Facundo

Such a tool would be marvelous. But as far as I know, nonexistent.

Thanks,
Mark

Although I think it=B4s possible to develop.... some days ago I found
some demo on the net (shit, I dont remember it=B4s name nor the crowd!)
that was distributed in MSA format, and for real Ataris, a .TOS file
was included as a loader....

Hey coders!! Give us your experienced opinion!!!

Regarding Papyrus:

I have all original Papyrus Gold v.5 which is the color version IIRC.

I've not really used it yet, and was wondering if it is worth upgrading to
the X version or
a version below X?

What are some of the biggest improvements over say version 5?

Hi!

> Does anybody know if there=B4s a way to boot a MSA file stored on the ST
> HDD directly without writting it onto a floppy?=20

I am acutally write a (simple) program which allows to read or write such disk images on a Atari. I want also add a MetaDOS driver which should allow to mount such images and access them like any other drives.

I dont want add booting from images because I think, it is not easy. While booting from such an image i need to have access to the HDD. But to have access to the HDD i need the harddisk driver to be present wich is normaly the case if i have booted from HDD.

Best regards
Michael

Yeah, should be quite simple to do. And don't forget a program/accessory
to change the "mounted" floppy image.

Most autoboot floppies are games and demos, which are likely to take over
the system, hence crashing/preventing any further access to any hard disk
you could have. So you should be able to run the program in boot sector,
but not much more.

With a 68030 or higher processor with a PMMU, it might be possible to
create a virtual ST address space, so any hardware access could be
redirected softly, but it is something that needs much more work. Well, it
would be an ST emulator, using main CPU to run the program instead of an
emulated 68000.

What about redirecting the floppy to a ramdisk? I.e. load the file from
the hard drive, into memory then warm boot the ST? Obviously won't work
without a fair bit of ram, and multi disk games would be a problem to.
Especially considering most of the PP stuff etc, is packed all ready.

Mark

Hi All

On again, as now I've found out how to work the auction process!

Starting at 250UKP not a bad price surely for such a beast?

Regards

Neil :-)

I don't know about the no soldering part, but from info I found online,
the Mega STe was supposed to have had an optional 68881 coprocessor,
which means there should be a spot for one somewhere on the
motherboard. If it's like the Falcon, you just need to buy the
68881/68882 and pop it in (making sure it's lined up properly, of
course). Also, I've heard that you could use a PAK 030 accelerator.
That would give you a 68030 running at up to 40MHz. There was also
Veloce, I think. You'd definitely need soldering with these, though. Of
course, then there's the issue of finding them! Good luck!

Hey guys, I was just poking around Wikipedia and noticed the entry for Dungeon Master. It says it had 50% penetration of the ST market.

Does that make it the best selling/most popular ST game ever?

I was just curious as to what game holds that spot.

Maybe it was. Off the top of my head, Xenon II is my guess.

More suggestions?

Coda.

The CPU in the MSTE is Socketed and can be easily removed. It is square BTW.
With some upgrades, you have to remove the CPU and place it in another socket on the
upgrade, which is the case with the Vortex 386SX upgrade.

The Co processor socket is located off the right corner of the 68000 chip.
It is square as well, BTW.
Which is on the left front of the motherboard, at the edge of the board in fact.

According to the MSTE manual, the MSTE is 68881/2 compatible.

If anyone is using a 68882 in a MSTE, I would like to know if it works correctly.

The MSTE is a great machine, and is really under-rated.

Putting a 020 in a MSTE is possible in my opinion. Not sure what you would have to
do to get it to work. I remember some projects using a 020 in a ST. You might try searching
on google for Atari Hardware pojects and the like, maybe you will stumble on something useful.

Some 020s were used in early Falcons BTW. You could go to Motorola's site and see if
they have any info on the 020 and 68000 to see what the differences are.
I have a Motorola 020 Manual, but haven't studied it yet.

Best of Luck.

Thanks for the info.

ST Basic didn't seem to catch on, like Atari 8-bit Basic did.
At least it seems that way to me.

Its good that some type of programming language is still being supported.
GFA Basic, I mean. Isn't GFA somewhat compatible with the PC version or
am I mistaken.

What happened to STOS?

Wasn't it a easy to use language, that gave some real power?

Anyone happen to have the latest version with manuals and some extra
programming modules or etc that they no-longer want?

I'd like to get the Falcon compatible version, that allows access to the
graphics
and sound capability of this machine. I think there were plug ins or
something
like that for the Falcon that allowed one to access different parts of the
machine
easily without alot of programming.

```

Greetings,

Need to know what the final version of Magic4 and Ease was?

And if there are updates that still can be gotten for free or pay?

I have at least version 4 of both.

Also, can Ease be used with Geneva instead of NeoDesk?

And how does Ease stack up to other desktop replacements such as NeoDesk, and Thing?

Will Ease work on a TOS 1.04 MegaST4?

phantomm@bellsouth.net

Dungeon Master on the ST was a great experience and I just loved it. To me,
however, the Ultima series was the best.

Hello,

I would like to exchange my 16Mb TT Ram board (4x4mb simms included). What I need is to complete my Mega STE with:

- one graphic card
- and one keyboard (TT/MegaSTE)

The TT ram board is fully operational: it was in my TT until this morning, never a single problem with it.

Guillaume.

Loved that series too Edward. I played 3-4-5 to death. I've got 6 but never completed it. VI even runs on my Falcon, and is hard drive installable. I have to say I'm disappointed in the graphics in certain areas of the game though. It looks like whoever ported it over used the original EGA (not VGA) versions for things like character portraits. Very ugly. Far less than what even a standard ST is capable of doing.

I guess 5 is my favorite. There is just something about the story of the Underworld and the Shadow Lords that holds my attention. Other little things as well, like when you do something wrong and the next town you go into has a wanted poster listing you and your party in it. Alas, mine won't run on my Falcon, just on my STs...

See ya.

PS Now that I've got my CT60 Falcon back up and running I guess I'll have to go back and try to finish Ultima VI... :-)

>correctly.

I have an 68882 in my MSTe.

The 68882 works correctly, but some software doesn't. The Pure compilers (both C and Pascal) make the 68000 wait for responses (to commands) which the 68882 does not supply so any program written in them which tries to use the fpu goes into an endless loop. Such programs can, however be patched to run correctly with the 68882.

LATTICE C programs work correctly with the the 68881 or 68882.

To add a 68881 or 68882 to the MSTe you need not only the fpu but also address decoding hardware - usually in the form of a GAL. The socket for this in on the board.

I don't think it was that good and there was no compiler, at least the
version that was packed with my ST did not have one which limits it for
producing programs everyone can use.

< cut >

As Lonny stated the souce code has been made available for anyone to tinker with and is available on the Click Team website or you can download STOS, Manuals and Extensions such as 3D, Meastro, Missing Link, Cyber and Extra as well as soem extra code bits for identifying STEEM form the STOS Megademo website at http://www.stos.atari.st. While STOS is primarily centered around creating games you can write applications with it if you wanted to.

There is the Falcon Extension by Anthony Jacques which can be found at http://www.btinternet.com/~AnthonyJ/Atari/index.html that will let you see what is is capable of although there is not complier for it, if you think it would be usefull after you have looked at it let me know as I may still have the complier extensions for it somewhere.
You should note however that you can not use it to produce a program that will run on both the Falcon and ST if it uses uses any commands from the graphics part of the Falcon extension as it causes an error when complied that prevent the program from executing. Even if you place a STOS error trap on the first line of your program you can not trap it as it is something the extension performs before executing your code (the audio part of the extension cause no such error). Anthony said it might be something to do with it setting/not setting things on even boundaries, I did not understand it myself however if you were planing to write for the Falcon only that should not be a problem.
STOS programs written without the Falocn extension will run on the Falcon although IIRC the desktop graphics can get messed up once the program ends requiring a reset, espically if it is run from the HD as IIRC auto folder programs loaded from a floppy are less prone to causing this problem.

Before I ask questions that have probably been asked a hundred times,
I was wondering if there was a good web site that had good reqources
for the 1040st? Ive been doing google searches, but I cant seem to
find a definative one.

Thanks in advance,
Chris Ryan

Here ya go:

http://web.archive.org/web/20041014070904/www.megacom.net/~q-funk/ST/
http://www.atariarchives.org/cfn/06/02.php
http://jens-inge.dyndns.org/html/guide206/INDEX.HTM
http://www.dwade.freeserve.co.uk/atari/main.html

I also have an Atari FAQ section on my BBS (see sig below), although it is
not complete. Its a bit more bother to reach, since as a new user you
would have to go through the registration. Honestly, you can probably get
most of what you need from the links I provided. Unless you just want to
call for a chance at the free monthly prizes. :-)

Other than that, don't hesitate to ask questions here in this newsgroup.
For every wretch that slams you for asking a question they have happened
to have heard before, there will be 3-5 that try hard to help you. :-)

Hi!

ESBJ> I have version 5 of Ease and version 6.2 of Magic...

Right, the same her.

ESBJ> >And if there are updates that still can be gotten for free or pay?

Updates still should be aviable from ASH.

ESBJ> >Will Ease work on a TOS 1.04 MegaST4?

Ease was bundled with MagiC before jinnee came up, but it can be used with plain TOS as well (tried that long time ago...).

ESBJ> >Also, can Ease be used with Geneva instead of NeoDesk?

It should, but I never tried it. My brother had MagixDesk running on Geneva, so...

ESBJ> >And how does Ease stack up to other desktop replacements such as
ESBJ> >NeoDesk, and Thing?

What do you mean: "stack up to"? Run on top of?

Regards,

Alexander

Hi All

I have put a Multisync 14inch VDU on eBay. This VDU has a horizontal sync
rate of 15-40 kHz and therefore is capable of displaying ST Low as well as
ST High. Used with a Falcon it can show most RGB & VGA video modes.

Low starting price as I need to clear some space.

Follow this link:

http://cgi.ebay.co.uk/MICROVITEC-1438-Autoscan-14inch-VDU_W0QQitemZ8765997307QQcategoryZ174QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

Thanks

Neil :-)

Hi all,

Have you been experiencing problems with ICQ last few days? Then keep on reading!

Recently there have been some serious problems with a couple of ICQ clients, aICQ being one of them. The problem has been that incoming messages have not been received properly. It would have seemed like all your friends were silent all the time. Thanks to some fast research by Dan, there is now an update which should take care of this issue. If you use AtarICQ, make sure to grab this update ASAP!

Other noticeable changes in the new release:

- Cleaned up the keyboard evaluation code

- Masked out all messages about oncoming contacts during the first 10s. (Some ppl reported server was lagging this data a bit, hence this delay was added in order to avoid unnecessary console text)

- Some ICQ (spam) bots are trying to trick ppl to add them to contact list by sending out signal that "user is online". That would indicate that we have already added them to your contact list, something that is not necessarily true. Since aICQ now supports the server side list directly, some of these attempts will now be detected and blocked.

- If contact list was empty, the option to "hide separators" would crash aICQ. Solved by temporarily cancelling the hiding, until contacts are added.

- In dialog for adding more contacts, the number of allowed chars for UIN/ screenname has been increased from 10 to 16.

- In MagiC, setting both SELECTEABLE and TOUCHEXIT for an object will make form_button() wait for the mouse button to be released. This is now worked around, allowing the setting of auto-away time in preferences to work smoother under MagiC.

Get the new AtarICQ release here:

http://www.ataricq.org

Regards,

/Joakim

You do not need to patch the software...

A friend developed a long time ago a program you put int he AUTO folder...
and all software run fine with 882.
I have it ...if you want it.

Regards

No Alex,

The phrase should really be 'measure up to' - i.e. how does it compare...

Regards, /Peter/

Thanks, Peter!

so:

>> ESBJ> >And how does Ease stack up to other desktop replacements such as
>> ESBJ> >NeoDesk, and Thing?

Well, it's quiet an old desktop, but you won't guess from its appearance.
It definetively less configurable (and modern) than jinnee and others,
missing stuff like *nix access right support, but provides handy features
like directory-tree popups when you hold the mousebutton while pointing to
a (hard)disc icon on the desktop.
It supports most standard stuff such as icons for configurable file/folder
name masks, automatic launch of applications associated with the data file
you want to open.
Not sure, but desktop notes and hotkeys for launcing applications are
featured as well.

Regards,

Alexander

X-Newsreader: NEWSie Version 0.96 (Atari)
Xref: g2news1.google.com comp.sys.atari.st:1863

Hello;

Version 3.80 of Tera Desktop (TeraDesk) open-source desktop is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

TeraDesk is currently the only open-souce desktop available for 16-bit and
32-bit Atari computers. Developer's goal is to maintain TeraDesk as a small,
simple, fast and reliable desktop, which can run on any TOS-compatible Atari
computer, clone or emulator and which can be be functional and competetive
in the modern multitasking environments and all flavours and versions of
TOS-compatible operating system(s), while keeping, as much as reasonable,

familiarity with the original TOS desktop.

Main new features in this release are related to a capability to pass names of network objects, such as web pages and ftp sites, via the AV and drag&drop protocols, and to assign such names as 'document types' to applications. Supported name prefixes are currently http:, ftp: and mailto:; this enables e.g. MyMail to work properly with TeraDesk, and makes it possible to open network targets from the Open... menu/dialog if appropriate applications are installed.

As a byproduct of these changes, names of network objects can also be assigned as targets of symbolic links and desktop icons. It is thus possible e.g. to have icons of favourite internet sites on the desktop.

A considerable number of not-very-obvious bugs has been fixed as well, most of them related to handling of extremely long paths and filenames (unfortunately, the bugfix code increased program size by about 1 KB). See the history file for details.

Another point which may be of interest is that there may be, probably very soon, Russian, German and French translations of this version of TeraDesk. Links will be posted on TeraDesk home page as soon as translations become available.

Users are advised to read the documentation before running the program ;)
Some features of TeraDesk may not be immediately obvious.

Have fun.

Hello,

As the Atari Workshop website has vanished and I have not been able to
reach Atari Workshop by email I have decided to offer the English
version of HDDRIVER *including the English manual* myself.
I am currently revising and updating the English manual. Users ordering
HDDRIVER 8.1 can now choose between the German, English and French
manual. The French manual only covers HDDRIVER 7, though.
For registered users of HDDRIVER 8.1 the current English manual is also
available separately. Please refer to
http://www.seimet.de/hddriverprices_english.html for details.

Remember that you can pay with PayPal, which ensures that HDDRIVER can
also be ordered conveniently from countries outside the EU without
having to pay high fees for bank transfers or sending the money in cash.

Best regards,   Uwe

Hmm. I just tried that link and it doesn't work. I did manage to get to:

http://solair.eunet.yu/~vdjole/atari.htm

but I get a "NOT FOUND - The requested URL was not found on this server"
error, when I click on the Teradesk link.

Sorry. :-(

Anyone actually have the RSVE hardware mod installed?

I'm looking for comments, problems, helpful hints, performance, etc.

Thanks.

ATTENTION Atari customers. I'm buying out an Atari dealer, cleaning out his ST software. Then Atari 8 Bit & Jaguar! I've paid for 80% of ST Games/ software & received 60% of ST Games/software so far! About 400 NEW Games! If this works out I'll buy out his 8 Bit and Jaguar stock! I need to make shelf room for NEW inventory and raise the capital to buy more Atari. If you would like to help save Good Ataris from extinction, buy ANY Games/ Software in my Classic Atari 8 Bit and/or Atari ST Catalogs and get 20% off! E-Mail or call Ben at (503)256-9974!

That's a good decision !!
Internet is here to allow direct sell from small authors/companies...this
business model do not need some distributors...

Regards

Ive got one but not installed actually ;)

But hey whats kind of problem you may have, its simple upgrade (?)

Hi Pawel - thanks for replying.

I've got one too. Its still in its package with original docs 'n stuff.
I don't know if it works or not. I remember buying it from Toad Computers
here in the States years ago, although like you, I've never used it.

Now I would like to install it in my Mega ST to try and get the increased
speeds for my BBS.

It does look fairly simple to install. I just have a few questions.

What 5v source from the motherboard would you recommend?

Also, do you know where I can get the pin layout of the MFP chip so I can
find pins 7, 10, and 16? I'm fairly sure I can find the dot for pin #1 and
count from there, but I just wanted to be really sure.

Thanks much!

If you have the time Rodolphe, maybe put it up on one of the better FTP sites.
This would be a most useful program for anyone installing a FPU in a MSTE.

Thanks for the info.

Hi Glenn,

If you get really desperate, I have the listing for the Macintosh version printed in a book called "C Programming on the Macintosh" by Terry Ward published in 1986. ISBN 0-673-18274-6

Steve.

Actually, that's "Programming C on the Macintosh"
and the author's name is Terry A. Ward.

Amazon reports some second hand copies at
very reasonable prices ;)

Steve.

>>Version 3.80 of Tera Desktop (TeraDesk) open-source desktop is available

A correction had to be made to the just-released TeraDesk 3.80- a variable was used uninitialized, which could cause starting of an application to -sometimes- fail with "Command too long" message. As luck would have it, this bug showed up for the first time only after the program has been released, although that particular piece of code has been made about a month ago.

As this was just a single correction and made immediately after the initial release, I did not update the version number; it is still 3.80, but release date is now February 16th.

Hopefully it will be all right now. I apologize for the inconveniences that this repeated releasing might have caused.

Regards;

Dear Atarians,

I would like to start this message saying that i'm really sorry to ask something that i'm sure have been answered many times.

I'm completely blind in the Atari ST world. Been an Amiga user all my life, and now i want to know the ST better.

I have an MegaST 4, and only few days ago i managed to get an original keyboard. This machine is waiting for about 2 years for this keyboard, so i can use it ! Now it's time to run some good software.

The problem is my machine is very "vanila". Just one disk drive.

I have many ST disk images on CD, but i don't now how to make real floppies out of them.

So i would like to know what's the best, easier, idiot proof way to create these disks.

I tried some programs on the PC side, like the Makedisk, but

they doesn't work well on the ST. They refuse to boot. And when i read
them from the GEM desk, read errors are reported.

So i would like to know how can i do this from the ST side. Can
i use a null modem cable to access the disk images directly on my PC,
and then create them on the ST drive ?

Is it possible to create a RAMDISK on the ST, without any extra
software, so i can put some images there, and then create the disks ?

I'm really lost here.

Any help will be very much appreciated.

Thanks and Regards,
Marcelo.

I appreciate the info guys,

I'll take a look at the STOS stuff, I am sort of interested in it and may need compiler extensions for the Falcon. I remember reading about STOS for the Falcon in ST Format.

I am not sure if it will do what I would like or not.

With Atari 8-bit Basic, I am not a expert, but can program most things that I attempt with it.
I like that machine language routines can be used in it to speed things up and get to what you want to do without alot of programming. But I'm not a expert at machine language by any means.

I like to mess around with graphics and sound on the ST-Falcon. Especially the Falcon and am looking for a programming language that will allow me to play around with pictures, sound samples, music files, video grabs (done with the Expose, VideoMaster Falcon, VIDI ST etc.) and the like.

I'm not looking to do alot of programming, but for example say I want to create a demo to run on the Falcon that uses nice graphics, sound samples and even some color video. I'd like to find some programs that already exist to display the graphics and play some music and or samples so that I can just use those and build onto those and change things around.

It's fairly easy to find examples similar to the above on the Atari 8-bit, but I've never really found anything like the example given for the Falcon or on the ST/E. Most good Demos for the Falcon are done in such a way, that I find it hard to learn from.

Although the original Falcon Demo that Atari used, is somewhat helpful. I'm not sure what language it was done in. But the demo is somewhat similar to what I would like to be able to do, by using a program or programs as a guide to build on, change, program and etc.

Are there any small programs in any language available that one could use as guides for making good demos, or messing around with graphics, video, sound samples and music on the Falcon, as well as the ST/E machines?

I would rather recomend u GFA basic over STOS. As basic is a lot faster, offer structual programing, easy acces to OS and hardware etc.. True, no special ASM routs as in STOS, but easy to include own ones, which can in most cases be better and mre optimised as STOs ones... GFA is some kind of top in basic languages... VERY powerfull and also with great compiler so compiled code is not bad at all...

For any real demo effects u have to learn ASM... Can be done in GFA for example, but code is then sooo weird, ASM looks ultra easy compared to that and u still dont came close to ASM speed.. Maybe u checked my line of GemXXX players for Falcon, they are done in GFA, however all replay routines are ASM (68000 or DSP) since basic simply dont offer so much speed and cycle precision... Still u can do VERY nice and decent stuff from GFA as well, this wasn't meant as spolier :) I can help u with Gfa, im sure Loonny and others will do as well....

There is MSA (Magic Shadow Archiver?) on the Atari, as well as ST2DISK.
Both might work for you, but I'm not sure if they require a Hard Disk
or not. Then there's the problem of getting them from CD to your ST...

> I tried some programs on the PC side, like the Makedisk, but
> they doesn't work well on the ST. They refuse to boot. And when i read
> them from the GEM desk, read errors are reported.

Not sure why this happens, unless you are using the wrong disk type. PC
formatted disks (as long as they are the same type as your ST floppy
drive - no 1.44mb disks) should be readable on the Atari, but not
necessarily the other way around.

> So i would like to know how can i do this from the ST side. Can
> i use a null modem cable to access the disk images directly on my PC,
> and then create them on the ST drive ?
> Is it possible to create a RAMDISK on the ST, without any extra

> software, so i can put some images there, and then create the disks ?

You can download freeware RAMDISK programs on various Atari FTP sites.
This might work well for you, if you need it. Otherwise, make sure you
have 720k disks (not 1.44mb HD), and either use MAKEDISK on the PC on
them, if it will work, or transfer them on the same floppies to the ST
and use ST2DISK or MSA. You can also use null-modem transfer, I
believe, but I'm not sure how to do this, as I've never needed it.

Hope this helps you!

Hi Steve!

SA>Do you think a SCSI<->IDE converter would have any broader applicati=
on?

There are such converters readily available. I've got two of those in

my Ataris (one in the Milan, one in the CT2B Falcon) to drive some
decent IDE harddisks.

With best regards
Ekkehard

> would have any broader application?

Yes, and that's why converters like this already exist. There is no need to design a new one, one can simply buy an existing one. There are actually users who have such an adapter (ACARD AEC-7720U, for instance) and use it with HDDRIVER.

> I think the answer is probably 'No', especially
> since the transfer rate is likely to be slow.

The transfer rate does not have to be slow. There is no reason why you would lose any speed when using such a converter.

> Actually, a more useful product might be
> to do the conversion in the other direction,
> and allow a SCSI drive to be read by a
> standard IDE port. Every PC has IDE
> ports, but not all have SCSI adaptors.

I doubt that a PC user would be intersted in this, because instead of
buying an expensive SCSI drive and connect it to an IDE converter it
makes much more sense to directly connect a stock IDE drive to a PC.

Hello,

The CTlink project was started a long time ago now...
After several months thinking I will finish the design (stills only the CPLD
to code and the PCB routing around this CPLD), I realized three thru things
:
1 - The power of MSTE, TT & standard F030 is too low to allow to really use
Ethernet 100Mbits... Even 10Mbits and USB (12Mbits) will dramatically
decrease the performance of these machines.
2 - Pre-orders are only 16 cards for MSTE, 25 for TT and 61 for F030. For
the first 41, a second card is needed to adapt to VME. 41 is not enough to
get a good price. And 61 on falcon is not terrible.
3 - I do not find motivation to finish this design (and win a bit money is

not one).
4 - I need more time for some other projects I consider more important and really more motivating (CTPCI & new motherboard).

So, I decided to cancel the CTLink project.
The schematics and notes will be put into a ZIP file and everybody will be able to download.
There is no copyrights on this and if one of you want to finish I will be happy for atari communauty.

I strongly encourage Falcon user to buy CT63 + EtherNAT card that is actually produced by NATURE.
I have yet 7 CT63 in stock and may produce more if some falcon owners decide to go to 060.

Bye

PS : I will send back money nextly to people that already pay for CTLink, except if they inform me they want I keep money for an other project.

Rodolphe Czuba

Hi All

Finally got round to sending my eBay advert in, you find it under Vintage Computing!

Thanks all those who responded to my initial posting here.

Neil :-)

looks right away

wow, the use of the black insulation tape is truly remarkable ;-)

not seen one of those cases before, very sexy indeed!
